Are you still seeing the ad at this time? I often run into this message
even on innocuous stuff like old mil headphones, old insignia patches,
etc If they are blocking those items to this part of the US I need to
have a word with them. Maybe a geography lesson wouldn't hurt.

Have for sale a noise blanker for an R4C. It was from a receiver owned and operated by an avionics technician who services Drake gear. It was known to be in operating condition a week before it was removed from the receiver. Price is $100 plus UPS shipping and insurance. Unable to ship outside continental US.

Thanks for reading the posting.

Hi folks,

I have a Wilson/Regency WH2516 radio.
This is a 25 Watt VHF FM radio that is programmable.

Do you have any parts for these? Do you know where I can buy a
replacement membrane key-pad for this radio?

It's apparently made by PresSwitch Co. About 2.75" X 3" with
buttons for 1-10 and Pro.Prior, Delete, Scan and Manual.
Also has two small buttons for Prior and Enter.

What *I* need is a replacement KEYPAD for this radio.

Do you have ANY or know where I might find one?

I'm just a hobbyist hoping to resurrect this beast that is almost
working right. Just a few digits that won't close and the switch
keypad APPEARS to be a sealed unit.

E-mail me please!

'Sidevalve'

# 2245. FS: Hallicrafters receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-04 03:12:21 UTC
From: skydive@usa.net
Message-ID: <3c82e20a.835101796@165.166.15.4>
Source record: 43972

I have the following receivers for sale:

SX-71 Good operating condition, just aligned and calibrated.
Missing the "H" emblem from the from panel. Fair paint. Lettering
99%+. All functions operate, S-Meter works, BFO works. Slight bit of
backlash in tuning. I made several CW contacts recently using this
receiver, and the backlash is annoying but not impossible to work with
( fine tune with BFO ) This receiver is a pain to re-string so I
never did it. All original knobs. $80 plus shipping. Will re-cap with
orange drop caps and re-align if you wish for an additional $50.
Please don't ask me to re-string it.

S-38B What can you say about a S-38B? It works as good as a 38 can.
very good paint, back cover intact, original knobs, silver trim rings
missing from tuning and bandspread knobs. $50 plus shipping.

S-53 Kind of works. Receives ok but no BFO. more than likely IF
alignment would correct that, but could stand re-capping. Cosmetics
on the low side of fair. Speaker not original, bandspread knob
chipped on edge and missing trim ring. Positive points: as far as I
know, nobody ever died while using it. It absolutely obeys the laws
of gravity. $30 plus shipping.

S-77A Works great, looks good. Not the best paint but not ugly.
Great lettering, good knobs, re-strung, Orange Drop re-capped and
aligned. $125 plus shipping

E-mail questions, offers, threats or whatever to skydive@usa.net

Message-ID: <3c82e7b2$1_3@corp-news.newsgroups.com>
Source record: 43973

I am in the market for a non working, complete S-20R. If its missing tubes and some electronics or the case is beat up, thats just what I am looking for. Im needing some mechanical parts for the bandspread in a radio that some yahoo stuffed a small meter in the place of the bandspread.

I can either buy outright or do a cash+trade deal.

For trade/sale I have a tested and working Heathkit Sixer. Only problems are cosmetic, at some point in its past life, the radio has had the handle go missing and a miliampmeter installed into the front of the case, for an S-meter I assume. The radio has been aligned and tested, puts out ~2W AM and is crystal controlled. It has the powercord and a mic, not sure if its the original one, but it works fine.

Jeremy

It is not rocket science -- just requires patience, average soldering skills, and some note-taking unless you have photographic memory (rules me out!). Work with a schematic at your side and check things off as you replace them. The parts that most often fail in old tube receivers are capacitors, followed by resistors. All of which are affordable and readily available.

If your SX-28 can croak at all, then the expensive/scarce parts such as transformers are likely OK. Don't worry about them until you have replaced the always-bad paper and electrolytic capacitors and given the set a good long test run on the workbench. Until you have started replacing capacitors, avoid powering up your SX-28, which might lead to damage.

My advice would be to take your time and do it right the first time. I have never been happy when I was in a hurry and did a half-baked job, thinking, "Hey, it wouldn't be that much work to go back and fix whatever else needs attention later." Later never comes. If you're not up for disassembling the RF deck, I would at least replace the easily-reached paper and electrolytic caps. Stack the deck in your favor, as best you can.

If you have never worked on an old tube radio, I would suggest picking up a cheap set from the local thrift store and practicing your skills on that one first. See http://antiqueradio.org/begin.htm and http://antiqueradio.org/recap.htm . Better to make your inevitable beginner's mistakes on a $5 thrift store radio than your SX-28.

Have fun!

Phil

# 2257. FS: Soviet Radio Power Supply Type HV-M

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-04 14:01:06 UTC
From: mc@NOSPAM.sover.net
Message-ID: <3c837d30.5394305@news2.sover.net>
Source record: 43984

This is something that I don't need but may be of use to someone interested in enemy radio equipment. It was used with several radio models.

It is the SOVIET AC military power supply, type HV-M made in 1951 as indicated on the equipment tag. AC inputs are adjustable and include 110 VAC. Outputs are +3V, -3V, +80V and -80V DC. It is in decent condition with cover and is on a shock mount. Of course it has tubes.

Anyone want it for $50.00 plus shipping? Please reply by e-mail.

73,

Michael Crestohl
mc@sover.net

# 2258. FS: Assortment of military shock mounts

can any one tell me the differences between the S-36 and the S-36A? My S-36 appears to be identical to a S36-A.

# 2272. For Sale: Hallicrafters SX24

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-04 22:25:27 UTC
From: nc183d@aol.com
Message-ID: <20020304172527.21348.00002499@mb-ch.aol.com>
Source record: 43900

Hi All,
I have a nice Hallicrafters SX24 for sale. It is a 9 tube, 4 band receiver covering from .54 to 43.5 MHz with a 455 KHz IF. It has an S meter, calibrated band spread for 10, 20, 40 and 80 meters, ANL, and a crystal filter. It has NO modifications that I can see and works well on all bands. I have photos for interested buyers. The PM23 speaker is NOT included. I am asking $125.00 for the unit. The buyer will pay shipping for this set. Pick-up is possible in the tri-state area (NY-NJ-PA).
If interested, please respond directly to me as I don't check the NG's as often as I would like to.
rgds,
Mark S.

I contacted them and resolved the problem. Only took two tries :-)
Apparently the block is done at the browser level if you have French or
German activated in your Preferences. I didn't have them but I had
Spanish. After deleting it, everything opened up.

RFN fuses are used in industry and home appliances...Some are used in
electric stoves/ranges and even some disconnect boxes, but they usually use
the ones that are 6 inches long.,

I don't have the book. I recall someone else asking about it recently.
IIRC it was a simple switch based on a 6C4.

To anyone considering buying this radio or the Collins gear also
listed: this listing may indeed be perfectly legitimate, but it has all
the earmarks of a possible problem for the buyer, to wit:

The poster gives an email address that has NO posting history on usenet.
The poster states he may put the items on ebay, but there is no such
user on ebay under this email.
The poster does not provide a name or call.

Buyer beware! Do not send many thousands of dollars to someone you do
not know, insist that the transaction be completed via an escrow
service, or go pick the radio up.

Just some free advice from someone who has been burned.

Message-ID: <3C84E7F8.1000008@concentric.net>
Source record: 43936

Tony,

If the circuit is passive, I would guess that there is a peak storage capacitor in the system somewhere. To measure true power you would need to generate a product of the voltage and current samples. If TMC did that I would be interested in knowing how too.

73, Alan - K6RFK

Antonio Vernucci wrote:

>Most through-line RF wattmeters (e.g. Bird) measure power in indirect manner, i.e. by summing DC voltages proportional to the RF voltage and the RF current on the line. This is the reason why such wattmeters do not show real power in case of an AM transmitter 100% single-tone modulated (they should indicate 50% more power under modulation, but they actually don't). Recently, I bought a TMC antenna tuning system (model ATS 2A/50 - MCU 2A/50, part of TMC transmitter GPT-1K) incorporating a wattmeter with a big two-needle meter. With my surprise, I noted that when I modulate 100% my 60-W AM transmitter, the wattmeter reading grows from 60W to 90W, this fact indicating that the wattmeter design accounts for the power increasee due to modulation. I cannot open the sealed sampling line of the wattmeter, but it looks quite normal, i.e. a plain cylinder joining two HN-type connectors and having two feed-through capacitors, that are connected, via adjustment potentiometers, to the the FWD and REF lugs of the two-needle meter. The circuit is purely passive (I keep the equipment disconnected from the mains). Can anyone explain how TMC succeded to do this, or does anyone have the schematic diagram of that wattmeter (I would reimburse reproduction expenses and postage for shipment to an US address).

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$325.00 plus shipping and insurance from zip code 76001

Thanks!

Hmmm.. are you sure about the back porch? AFAIK *all* of the RAOs had
the back porch...

What I know about the various models:

RAO-1 National - based on the NC-120 - it is the NC-125 with an added
"back porch" which contained an additional tuning capacitor section
(above the chassis) and a set of sliding coils (below the chassis) to
accommodate an additional RF stage... the tube for the stage is mounted
on a "balcony" bolted to the rear of the main chassis. The main tuning
and the band change shafts are extended through the back of the main
chassis to the rear porch.

RAO-2 National - some mods - mostly money saving.

RAO-3 Wells Gardner - based on the National design -

RAO-4 (no info)

RAO-5 Wells Gardner - same as above.

RAO-6/7/9 National - various mods, some money saving (like elimination
of the meter) - other hardware changes to make them easier to work on.
Some people claim the RAO-7 was marketed by National as the NC-127 - I
haven't seen documentation to support this - so pass on the "claim" with
no comment - I just don't know (pictures I've seen are similar).

RAO-8 (no info).

All of the above (save for the no infos) I'm sure have the back porch -
I never seen (nor heard) of an RAO without one.

# 2323. id missing final in HB xmtr

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-05 19:51:47 UTC
From: Jim - qrp/cw <kw3u@warwick.net>
Message-ID: <3C8521D2.AB7C48D5@warwick.net>
Source record: 43801

Hi all;
from estate I picked up a homebrew xmtr, I believe 80 mtrs as the
xmtr
shelf has 3550 xtal. The bottom shelf is a power supply, large xfmr,
rectifier
tube (5zsomething) choke,caps, etc - with 4 wires that go to shelf 2
(transmitter).
two wires labed H are 6.3v, and the other two meter 550v dc.
the oscillator tube is a metal 6L6. now the mystery (for me) the final
tube
is missing, there is a ceramic socket 5 pin and a plate cap
above(connected
to rf choke,etc)
thats basically it, I'm hoping someone may have an educated guess as
to what
I might plug in(I shud probably rephrase that).
I'll be taking photos later in the week to email if it would help.
kinda neat and would be fun to put on air.
tnx for any help Jim kw3u

>now the mystery (for me) the final
>tube
>is missing, there is a ceramic socket 5 pin and a plate cap
>above(connected
>to rf choke,etc)

5 pin socket running on 550 volts sounds like it might be an 807. A 6l6 seems like a bit much to drive it, but it may be based on what was available. Heck of a good tube those 807's. When I was so broke I couldn't afford a meter for the plate current, I used to tune my CW transmitter by the color of the plate in the 807. One of 'em ran many months with a hole burned in the plate from some over zealous loading. It never complained, just kept doing it's thing.

Possibly an 807, it is 5 pin.

Hello- Two older Heathkit items FS :
GR-98 Monitor Receiver 108-135 Mhz. in leather case. I have not checked unit or removed it from case, it is in need of cleaning, fair cond. 20.00
Unknown model # of AM radio tuner. Has copper chassis with 5 tubes { miniature 7/9 pin}, has Heathkit in cursive chrome in upper left corner, slide rule dial, with tuning and volume controls. Compact unit for stereo system tuner appears to me. Poor to fair cond. and looks like power trans. burned up. Case is a brass color. 10.00

Jim, this was a typical rig back in the 40s and 50s..used 6L6 osc and 807 PA . with 550 VDC the 807 would probably run about 50 watts input. Millen built one in late 40s that was pretty popular,used plug in coils ,model # 90800..You can get a manual copy from W7FG Manuals..the design showed up in QST Nov. 1940 also. I built a modulator for mine and used it for many years..I have some 807 tubes if you decide to put it on the air,let me know..good luck ...W4PQW Harold

Message-ID: <3c857234.161126875@165.166.15.4>
Source record: 43814

I never thought I'd try to sell this radio, but the way the prices have been going, I'm going to throw this note here before going to eBay. I built the AC-1 in 1968 and have used it off and on since then. It comes with the 40 meter coil, a crystal for 7040, a key plug and cord made from a defunct ft-243 crystal, and the original assembly / operating manual. The rig is all original and in very good shape. Some light scratches on the chassis. The fron panel says "DIVISION OF AEROTRON INC" at the bottom ( I guess a lot of them don't). There is a 3/8 inch hole drilled on both sides of the chassis where I put a key jack and antenna connector many years ago. The connectors have been removed, but the holes never healed.
I will have pictures available tomorrow, in the mean time, it can kind of be seen in the picture of my shack at
http://web.infoave.net/~masoste/wb8cac

$225 plus shipping.

If you would like to hear it on the air, We can arrange a sked very late at night or verrry early morning.

Message-ID: <3c857443.161654140@165.166.15.4>
Source record: 43815

For the last 30 years or so, I wanted to make a contact with an ARC-5 transmitter and receiver. OK, I did it, made several contacts, don't plan on doing a lot more of it. Equipment consists of

BC-455 receiver modified with headphone jack, RF gain control and BFO switch. Power wires are soldered to the dyno connector. Receiver has the authentic spinner knob and receives quite well.

BC-459 transmitter, modified with key jack on fron panel, rear power connector re-wired to work with my power supply. Getting about 45 watts into a 50 Ohm load.

Power supply, Heathkit HP-23 modified for slightly lower plate voltage to not put the 1625s into orbil. Transmitter and receiver work from this supply.

T/R switch switches antenna ant turns tx screen voltage on and off so the tx VFO doesn't drive you crazy when trying to receive.

It all looks good. Does not have the best sounding x note you ever heard, reports indicate slight wavering in tx frequency while keying. Stability is decent, the rig doesn't drift off over the horizon, but FM detectable on sig.

$150 plus shipping for the complete setup. Do something different.

E-mail skydive@usa.net

# 2338. Re: Hallicrafters S-36

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-06 04:11:41 UTC
From: michael smith <fishperson@worldnet.att.net>
Message-ID: <1Ggh8.17482$gK2.1273481@bgtnsc04-news.ops.worldnet.att.net>
Source record: 43816

Just some thoughts on the S-36, S-36A & S-27. Mostly speculation, It would
appear that a large number of S-27s went to England around 1939. Were these
a part of a lend lease program or bought from Hallicrafters? It also appears
as our govt. started purchasing these receivers for our military forces
that Hallicrafters started changing components to meet the military needs,
thus the S-36. The early version appears to be a S-27 with bathtub caps and
tropicalized wiring, military type identifier tags and a change in some of
the tube type. This design was then improved with a new chassis layout, the
capacitor tuned I.F. transformers were replaced with permeability tuned ones
and a round tuning meter replaced the old style. At some point a panadaptor
jack was added to the rear . My S-36 is this late model it is identical to a
S-36A in looks and appears to be the same circuits as the 36A.
It is to bad that so little is known about this very important Hallicrafters
product. My dad who was in the signal corp during this time remembers very
little about this or other receivers they used at that period. He is 82
years old, so the people who once had the answers are fast disappearing.

The 2BQ kind of scarce these days... I'm not positive, but I think a
2CQ will also work if looks don't matter. But it doesn't exactly match
the 2B's black paint. I'm pretty sure a friend of mine who once had a
2C, used a 2BQ as the speaker. So I think either one will work. I've
got a 2C and 2CQ. MK

Jim,

I'd make an uneducated guess that the missing bottle is an 807! Very
common PA valve in the 1950s and 60s.

Do any of you creative gents out there have any ideas for making an adapter for testing out a 6BM8 tube on an I-177B tube tester? I checked Nolan's Boatanchor web page & he hasn't yet got to designing one. This particular 9-pin miniature tube, also designated as ECL82, is a triode + output pentode that is used in a number of tube stereo fm-receivers. I'm restoring one now & would like to use my I-177B to check the 4-output tubes.

While I don't have the tube tester that you have, on mine the manual gives
a method to add new test data for a non-recognised tube.
If no other help avaiable, e-mail direct and I will type in the method.
May just work on yours. Mine is a 1950-60 type tester
Jack

# 2351. WTB: Johnson Courier or T-bolt Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-06 16:00:53 UTC
From: rs2bk@aol.com
Message-ID: <20020306110053.18483.00000746@mb-ci.aol.com>
Source record: 43829

Looking for the plastic maroon piece (with rubber backing)
that goes on the front of the Johnson Thunderbolt and the
Courier.

Tks. Jim w9ud
Moline, IL

# 2352. FS or FT: Drake TR7 8KHz AM filter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-06 17:38:19 UTC
From: casey@dsl-only.net
Message-ID: <47343202.0203060938.1c0aade3@posting.google.com>
Source record: 43830
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I'll shortly have available the 8KHz AM filter from my TR7. Asking $60 shipped.
Will consider trades or partial trades for:

>=12A, 12/13.8V PS
quality straight key
large LED UTC/24hr clock
1954 edition of ARRL Handbook
nice condx 2-nt (will chip in $ for this one)
alum trim ring for t-4xc vfo dial

73,

Casey, KS7J

## 2353. FS URM-90

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-06 17:46:02 UTC

Thanks for the offer Jack:

I'm going to give it a shot & try to figure this one out myself. My tester is a 1944-vintage instrument. If I can't figure it out I'll give you a shout. I'm going to try the tube-audio crowd next. Seems like they should have some answers. This is a pretty popular hi-fi tube.

Sure, look up what SX-88's go for if you can find one.
SWL is becoming huge since ALL the media in the US is now governed by 5
parent companies.
The war also, I hear Kenwood is scrambling to get a cheap consumer grade
receiver out.

SWLing may indeed be picking up, what with the hot situations around the world. But for that an SX-115 isn't worth much -- all it will get is the 40-meter band, plus the Ham bands. An SX-88 would be great for SWL, but I hope there aren't too many people who put up big bux for a great receiver to listen to foreign broadcasts, then find it gets only the Ham bands!

OTOH, some newly rich dude who pays $5K for a radio without looking it up in Osterman's book, that would make me smile, sort of.

Not that anyone implied this about the buyer of the SX-115. ... Mike K AA1UK

There's no law against paying $5,000.00 for it either, but that doesn't
make it a smart thing to do, or an event unworthy of comment!

Source record: 43852

Hi Bruce, here's a description I posted a while back about painting an MS-4 speaker, but most of this also applies to painting the cases...

First of all, unless there's significant pitting, deep gouges, or rust, you probably don't want to sand down the cabinet nor strip it. You can fill/patch surface imperfections with Bondo (available at auto outlets). Be sure to sand it flush.

Now here's how to paint the speaker (also applicable to other Drake 4-line gear)...

1. Remove the speaker grill from the cabinet.
2. Remove the speaker from the grill (4 screws/nuts).
3. Cover the logo plate on the front of the grill with masking tape. Use a knife to carefully cut the tape around the edge of the plate..
4. Spray paint the front of the grill as described below, using Krylon 1608 Smoke Gray aerosol paint.
5. Remove any feet from the cabinet and spray paint it as described below with Krylon 1613 Semi-Flat Black.
6. Re-assemble.

If done carefully, the results will be very satisfying.

==========
Painting instructions:

SAFETY FIRST: Wear a good quality repirator, one that is made to remove organic solvents (not just a dust mask). Lacking that, paint outside or in a VERY well ventilated area. The solvents in the paints can do real neurological damage. Believe me, I KNOW!

Now, down to painting:

First clean off the surfaces with Naptha (the solvent, not the soap). It's a good wax remover/mild degreaser that evaporates fast, and leaves no residue. Then set up your painting area such that you have a single bare 75 to 100 watt light bulb (like a clip-on lamp without the reflector) located away from you at about head height, putting the cabinet between you and the light, and oriented so that it casts a bright glarey, or "spectral" reflection off the surface you will be painting. Then moving side to side like a machine, spray on your first coat, keeping your head located so that you can see the glare off the cabinet. Don't try to get perfect opaque black on the first coat, just go for even coverage. Wait about 1/2 hour, then put on your second coat, this time going for nice and black.

General aerosol painting techniques: keep your spray can 8 to 12" from the object. Work methodically, don't overshoot (put down too much paint) on any spot, and keep moving at about 12 to 15 inches per second. Keep the nozzle pointing forward, and as level with the ground if possible, no more than 45 degrees from horizontal, and never vertical or it will drip and mess up your work. Start the spray before you reach the leading edge, and only release the button after you leave the trailing edge. Work in one direction only, choose right to left or left to right, and then stick with it.

If your paint looks even in that glare, it will do fine. If you start to get shiny stripes of thick paint, back away from the object and/or make your stripes closer together.

Let the second coat dry for about 15 minutes, and then you're ready for the texture coat.

Then (and this is the magic) back up around 3-5 feet and MIST the Krylon onto the cover, sorta like a fog of paint. Move the can around in a gentle circular motion, evenly misting on the entire surface. This will give you a really beautiful texture that, IMO, rivals the original paint. Resist the urge to put on too much texture, a little goes a long way.

No it's not the equal of the original paint, but it's mighty nice, not too glossy, and not hard to do. And it doesn't cost $75 and two weeks per cabinet.

Try it, you'll like it!

Please let me add a ringing endorsement of this auction.
These folks are some of the finest you could meet,
and they run a very good auction.
It's well worth a trip to Houston for this.
Kind Regards,
Dave S.

I'm trying to align my T-4XC according to the manual, but having never done this before I'm a little confused by the steps where you adjust a *pair* of trimmers for each band.

Exactly what is the correct technique for adjust both trimmers at once as the manual instructs? For instance, do I turn them both incrementally in the same direction, or do I adjust them independently in either direction?

Thanks for any advice.

73,

Casey, KS7J

There is a no nonsence email list (reflector) 4 years old now.
It is for buying and selling old tube type gear and their
accessories ONLY.
No discussions, no arguments, not intended to be
friendly, nor unfriendly.
Unless an item is very unusual, prices are required.
At the present time, no annoucements of auctions.

The email list is baswaplist@foothill.net
The list is as spam proof as they get. We have not had
any spam in over a year now.
It has always been free, and contains no commercial
advertising.
We use plain text only, no HTML, etc.
Attached pictures (jpg, etc) are no allowed, however
links to them are incouraged.
Expect to receive 5 - 15 emails per day, from people
wanting to buy or sell old tube type stuff.

TO join the list:

SEND TO: majordomo@foothill.net
SUBJECT: (does not matter)
MESSAGE: subscribe baswaplist
(That is ALL you say in the body of the message.
the email address from which the message is sent
will be the address subscribed to the list.)

Source record: 43872

Casey,

I wasted HOURS trying to align my T4XC by the manual. Forget it!

I don't remember the details, and your B line may be a bit different
from my C-line, but here are the two major areas of disparity:

First, the book says switch to usb and then peak the (if I remember)
IF transformer and/or coil. I got no readings, but everything peaked
perfectly in LSB / CW mode - use that instead.

Second, regarding the trimmers, if I remember, the manual says to
touch contacts with a screwdriver to detune the circuit. Don't.
Simply set the transmitter up for the band in question, monitor the
output on a dummy load / wattmeter, and adjust the two trimmers for
the band until you get maximum output. It doesn't matter which one
you do first, but go back and forth. You will have only one
combination / setting for maximum output per band.

Perhaps some Drake purists will disagree, but all I can say is it
worked for me.

Good luck,
Jeff
W8KZW

Hi; I'd like to thank all for their emails about my missing 5pin tube in

the old 80 mtr xmtr. after finding an open filament wire and 1 open
connection in the oscillator section, i installed an 807 i found amongst

the cigar boxes full of goodies. fired it up with dummy load connected
and it works. puts out about 15watts(the tube is probably not up to
snuff,
but I'm a qrper anyway) hope to get on the air this evening and make a
few
qso's b4 taking to hamfest.
The gang on this newsgroup has always been helpfull to those of
us
with questions and quite knowledgable, so kudos to all for the true ham
spirit. 73 (72 to the qrpers) Jim kw3u

Thanks Jeff,

Yes, indeed, there are shortcuts to this stuff very often.

Unfortunately, my problems with the tx are now increasing. I started this adventure because of low or no output above 40 meters. After a thorough DeOxit cleaning of all switches and looking for loose ground connections, etc., and letting it sit overnight I was back at it by verifying that 80 meters still tuned up OK.

Well, it did, sort of, but I noticed the power was a little lower than last time. By the time I went up to 40 M for a check and back to 80 M I now have NO
output at all. The plate meter never rises above bias current with any setting of knobs or dials.

Next candidate for troubleshooting was the xtal oscillator circuit, and I followed the manual for that check. Got some rather confusing readings that I'm not sure I trust, but it definitely did not go according to the manual (e.g. pins 1 and 3 show zero ohms whereas the manual table says they should be infinite). I'm not sure what other verifying test I can do to see if the xtal osc. is actually working or not, but if it ain't that might explain why there's no output.

BTW, before someone suggests it, I was very careful not to ever run in Tune mode more than several seconds to make sure I didn't blow the finals. This TX was known to be working at least through 20 meters before I got my mitts on it, though power was not up to spec then, which led me to believe that an alignment might be all that was needed.

Since I'm short on test equipment and diagnostic skill here, I'm about ready to ship it off to a repair place if some fellow ham isn't able to provide some pointers about what to do next.

73 es tnx agn,

Casey

# 2399. Re: Need 4-Line alignment help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-08 18:34:01 UTC
From: dinoal7lz@aol.com
Message-ID: <20020308133401.14537.00000281@mb-fc.aol.com>
Source record: 43877

On the issue of the trimmers, my C-line started to exhibit different outputs depending on which VFO was in control....touching up the T-4XC trimmers as previously discussed cleaned all that up...and it doesn't matter which you do first just as long as you max the reading by going back and forth.

Second, regarding loss of power out...had similar problem where power would go from full to none...did all the normal cycling thru switch positions, DeOxit cleaning, etc. etc. I just couldn't find it, but John Kriner did after two trips back and forth. Highly recommend him for repair...good work and very reasonable....C-line is up and running great now.

>jack was added to the rear

I have an SX-36A, working, but not very sensitive. It has a round meter, but the IF cans still have trimmer caps (or that's what they look like, with screw slots, but *could* be slugs). And I hadn't noticed a panadapter jack on the rear, though I can't be sure I've ID'ed everything. It would make sense to provide one in this wideband set.

Did the Brits get into VHF for aircraft com? I think the US used something like 120 MC in the Pacific. Just wondering what they would do with this radio.

# 2406. Drake PS-3 problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-09 03:12:49 UTC
From: Marvin Born <mborn@k8xu.com>

Source record: 43884

Gentlemen,

I have a problem with a Drake PS-3, which is the power supply for a Drake UV-3. I need a copy of the circuit diagram or even better the complete manual.

My problem seems to be that the supply works fine when I first turn it on. I can run the radio in HI power and get about 25 watts out on 144 and a little less on 444 mhz.

However, after the supply has warmed up ( 15 minutes or so) and then I go to HI power on the UV-3, the meter light flickers and the supply drops out, as if it goes into over current protection. If I spray the 723 with cool spray the supply will work again in HI for a few minutes then fail again. I did of course replace the chip and the same thing happens to the new one. Since I have no manual at this point I can go no further, Caps are ok, checked with a scope. The current to the radio does not increase over time, and I have tried the UV-3 on another 12 volt bench supply and it is fine.

Has anyone seen this problem before or does anyone have a manual they are willing to copy for me?

73, K8XU

Military AN/URM-25D Signal Generator, 10 kHz to 50 MHz Tunes
Continuously in 8 Bands

Perfect match for your R-390 or ANY other radio operating over the
frequency range.

Includes the hard to find accessories:

(5:1) Fixed Attenuator CN-223/URM-25
(10:1) Fixed Attenuator CN-224/URM-25
Antenna Simulator SM-35/URM-25
Impedance Adapter MX-487/URM-25D
Test Lead CX-1363/U
Connector, Adapter UG-684/U
Test Lead CG1207/U
RF Cable Assembly CG-409A/U (0'5")
BNC Tee Adapter
Spare Fuse

SPECIFICATIONS:
Frequency Range - 10 kilocycles to 50, 000 kilocycles ± .5%; ±
.05% from 1 mc to 50 mc when calibrated against integral crystal.

Tuning Bands And Range Of Each Band--
(1) Band A --10 to 27 kc
(2) Band B 27 to 80 kc
(3) Band C-80 to 230 kc
(4) Band D 230 to 680 kc
(5) Band E -.68 to 2 mc
(6) Band F 2 to 8.3. mc
(7) Band G 8.3 to 18 mc
(8) Band H -18 to 50 mc

Output Voltage (RF) 0.1 to 100,000 microvolts continuously variable
(across a 53.5 ohm external load).

Types Of Modulation:
Amplitude modulation -0 to 80%, (indicated accuracy within +10%).
Internal modulation frequencies: 400 or 1000 cycles per second + 5%.
External modulation frequency: 100 to 15,000 cycles per second.

Power: 103 to 126 volts, 50 to 1000 cycles, single phase AC.

In very good condition, checked and working. Guaranteed not to be DOA
but otherwise sold as-is due to age

Includes TM 11-5551B URM-25B Full Maintenance Manual and TM
11-6625-278-20P URM-25D Supplement.

$125 + Actual Shipping Cost
Send Zip code for shipping costs.

Hello David, Check out the Collins Collectors Association website www.collinsradio.org

There will be a 75A-1 manual available in the next week or so. I have it to scan just need the time to add it. On the CCA website you can subscribe to the CCA reflector where your ask will be seen by 1000+ members. There is also a list of our nets with our main one being on 14.263 on Sunday at 2000 UTC. Please stop by and you can also put you want out on the buy, sell, swap that starts at the beginning of the net.

P.S. there are also instructions on how to join the CCA and help support our archiving efforts. You do not have to be a member of the CCA to download any or all of the information on the CCA website. No passwords are needed either. Thanks Larry

I will keep you posted on the progress of the 75A-1 manual. 73's

Larry WA9VRH

# 2428. Tnx Everyone: Re: Need 4-Line alignment help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-10 02:57:46 UTC
From: casey@dsl-only.net
Message-ID: <47343202.0203091857.3fda9d2a@posting.google.com>
Source record: 43756

Many thanks to all who helped out with so much great advice on how to work on my T-4XC. I may never know why at one point it had no output. Poking and cleaning I eventually determined that all the test points were close enough (and in several cases the manual is definitely in error) and when 40M decided to come back on line I proceeded with an alignment. That brought great results with power out on all bands, though the high bands are pretty weak (above 20 meters I'm down to 60-15W as you go to 10M). I do have 160W on 80, though.

Not sure what's up with the high bands, but I'll get to that in another session. Actually my biggest problem now is a very low sidetone level. Why Drake never deemed to put in separate sidetone audio level pots is beyond me.]

Anyway, the Twins are now making QSOs and the FoxTango filters are great! It even has a 125Hz filter that is tight as a drum. Gotta love it if you're into CW.

tnx agn es vy 73,

Casey, KS7J

Mike,
your S36 may have cap tuned if cans, my 46 hand book has a picture of 36A with capacitor tuned cans. This is one of the strange things about this receiver the way it seems to move back and forth with different components. Some early S-36 sets had the panadaptor jack on the side, later sets seem to be located on the rear next to the ant. binding post, it is a so239 connector.
I notice that my S-36A manual doesn't show one at all.
my set seems to be in pretty good shape all of the tubes test very good and a alignment did wonders for mine. Still I am going to replace the acorn tubes and see if it will help. I notice that a good ant seems to help things along also.
I am going to try to document what variations occurred if I can gather the information and its not lost forever. Mike Smith

What sort of information are you looking for? I have a S-36 and will be happy to share what I can. By the way, I'm sure the acorn tubes can be troublesome. All three of mine are quite gassy, but it still gets all the FM broadcast stations, CBers, pager noises, etc. I peaked the IF alignment by ear and must have picked up about 6db. Don't know how it drifted off so much. Should work better after I replace the acorn tubes and give it a real alignment.

# 2433. WANTED: Manual for Marconi TF 1041C VTVM

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-10 10:44:21 UTC
From: Richard J <no.flame@no.spam.se>
Message-ID: <a6fege$cqi$1@news.lth.se>
Source record: 43761

Hi guys -

I could use a manual - or simple instruxions - for an old VTVM Marconi TF 1041C . All I found so far was from commercial manual merchants. I realize they need to make a living, too, but..... :-) in my case it´s only a hobby...

Pointers appreciated - as always.

Cheers /Rick, SM7SCJ

# 2434. FS: Drake FA-7 fans, AUX-7, PS-7, etc.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-10 14:35:13 UTC
From: k9sqg@aol.com
Message-ID: <20020310093513.05031.00000405@mb-mt.aol.com>
Source record: 43762

Have two Drake FA-7 fans for the TR-7 and TR-7A transcievers. Selling for $35 each plus UPS shipping, continental US only please.

Have a Drake AUX-7 board for the TR-7/TR-7A/R-7/R-7A. Looks unused, has the factory warranty card, and one module but I don't know what it has been programmed for. Selling for $100 plus UPS shipping, continental US only, please.

Have a PS-7 heavy duty power supply for the 7 line. Does not have the FA-7 fan; it is being sold seperately. Does not have the cover plate for the FA-7 mounting hole. Selling for $100 plus UPS shipping, continental US only, please. This is a beefy supply and is very heavy so UPS charges might be high considering your location.

Have a TR-7 with absolutely NO options installed. It does have the DR-7 digital readout but no extra filters, no AUX-7 board, no noise blanker, no FA-7 fan, and no cover plate for the FA-7 fan opening. Have a copy of the owner's manual. Serial number is 99XX. Listened with it on 75, 40, and 20 and seems to receive ok. Tried it on 40 LSB and it works but audio quality was not as good as it should be; suspect it needs an alignment. Cost of an alignment would be $50-100 depending on how comprehensive it would be; Drake technician is available locally if you would like to pursue it. Selling for $250 plus UPS shipping, continental US only, please.

For fellow Drake enthusiasts, I can provide a packet of copies for the Drake 7 line which includes copies of the TR-7 and R-7 service manuals and owner's manuals for almost everything in the 7 line including TR-7, R-7, L-7, L-75, MN-2700, phone patch, keyer, speech processor, general coverage mods, etc. etc. Entire set of copies is $26 shipped priority mail, continental US only, please.

Thanks for reading the posting.

73s,

Evan

# 2435. SX-42 front panel needs help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-10 14:51:01 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <u8msmnrbockqd8@corp.supernews.com>
Source record: 43763

My Hallicrafters SX-42 has a chipped & nasty front panel. Anyone have a good panel to sell or trade, or know of a refinishing service?

Here http://raq64.webpg.net/~p15218/SX-42/angle.jpeg is a picture of the condition it was in when I rescued it from the curb. It has been reworked electrically and performs well but the front panel is now an issue. I plan to repaint the cabinet this spring.

thanks
Bob

Date: 2002-03-10 22:34:19 UTC
From: Martin Peters <martin.peters@ntlworld.com>
Message-ID: <ocRi8.15588$y76.2006481@news6-win.server.ntlworld.com>
Source record: 43773

Greetings all,

I fancy trying to trace a receiver type that I remember having a play with back in the early 1970's. Pretty certain it was an Eddystone - black cabinet - central, semi-circular tuning dial with different coloured legends, probably one colour for ham bands, another for broadcast bands etc - am/ssb.

That's all I remember. Any thoughts appreciated.

Thanks - Martin

Hi,

These are Eddystone models with the case you described. Try to remember
litte more details so it is possible to make more exact "diagnose".

Possible models: 358, B34, 400, 504, 640, 670, 680 and 740.

You can check some details here. Maybe this help you to remember more...

The only calibration I have figured out is the voltage meter(mine was off 50volts at 450volts). Adjust R-27 to match an accurate voltmeter. This doesn't affect "leakage current" measurement on same meter. Fortunately, my electrolytic checks match new caps. Let me know if you receive total calibration routine. Thanks!

Amateur Radio Newsline™ Report 1282 – March 8, 2002

Amateur Radio Newsline report number 1282 with a release date of
Friday, March 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The Dayton Hamvention announces the EMMY AND OSCARS of Amateur Radio. We have the winners on Amateur Radio Newsline report number 1282 coming your war right now.

(Billboard Cart Here)

**

HAMVENTION 2002: AWARD WINNERS NAMED

The Dayton Hamvention has named Radio Amateur Information Network founder Alanson “Hap” Holly, KC9RP, as its 2002 Radio Amateur of the Year. Holly received the news of his selection on Thursday evening February 28th in a phone call from Cathi Hoskins, N8ZCQ, who chairs the Hamvention Awards and Banquet Committee. KC9RP tells Amateur Radio Newsline that he was completely taken by surprise:

--
Holly KC9RP: “I was absolutely stunned! In fact, all I could say was me? I mean seriously, I was just absolutely floored.”
--

Holly, lives in Des Plaines Illinois has been licensed since 1965. He began his ham radio informational programming career in 1984 on a local Chicago Area repeater. This eventually lead him to become founder, moderator and guiding light of a weekly amateur radio audio feature magazine known as the RAIN Report.

--
Sample audio from Rain Report.
--

RAIN programming is distributed to hundreds of repeaters across the country via a telephone dial-up line, the rainreport.com website, by a subscription tape service and broadcast over W-A-Zero-R-C-R's weekly 160 meter informational net.

But that’s is only a small part of the Hap Holly story. Originally licensed in Escondido California at age 14, Holly who has been blind since age 7 served as a phone-patch station and net control for the famed WESTCARS traffic net until 1970. He then headed off to Principia College in Illinois and from 1970 to graduation in 1974, ran phone patches and kept radio schedules for many of

his fellow students.

Holly graduated Principia with a Bachelor of Arts degree in Sociology, and soon found himself in the Chicago area. There, he sought out world-class jazz accordionist Leon Sash, to pursue further training in music. As a professional keyboard player, Holly’s diverse repertoire of American music of the past six decades has made him a popular choice in the Chicago area.

Hap met his wife-to-be while he was teaching a class in non-visual perception to high school students at a summer camp in Buena Vista, Colorado. The two were married in August of 1976. Stephanie, who is sighted, received her ham ticket and KA9WKD callsign in 1986.

Over the years, Hap Holly has written articles for the Spec-Com Journal, Radio Scan Magazine and occasionally reports for us here on the Amateur Radio Newsline. Holly is also a common sight at the Dayton Hamvention, taping forums which are then incorporated throughout the year into his RAIN Reports. And since 1975 KC9RP has been an honored member of the Des Plaines Lions Club. He has also been a member of the Des Plaines Toastmasters since 1976. He and Stephanie are also active with Des Plaines Illinois Emergency Medical Alert system.

Named as this years Hamvention Technical Excellence award winner is Alan Waller, K3TKJ, of Laurel, Delaware. Waller was chosen for his work that lead to the interfacing the Internet to Amateur Radio.

First licensed in 1961, Waller combined his decades-long love for Amateur Radio and a burgeoning interest in the then-new Internet to design and manage the www.qsl.net and www.qth.net web sites. That was back in 1993. Since that time, Alan Waller's web sites have come to serve the needs of tens of thousands of ham radio operators worldwide by providing a vast technical reference platform, an electronic mail service, web page hosting services, and links to thousands of other ham radio related sites. And in the true spirit of the Amateur Radio, Waller's initial work utilized leading edge experimentation to see what could be done with the technology then available. This has developed into a mature, reliable service to the world wide ham radio community.

Rounding out this seasons winners are a pair of pair of space exploring hams who have been named as co-recipients of the 2002 Hamvention Special Achievement Award. Former astronauts Owen Garriott, W5LFL, and Tony England, W0ORE, are being honored for paving the way for manned ham radio operations from the space shuttles that has made ham radio a permanent part of mans exploration of space.

Owen Gariott, W5LFL was first. On November 28, 1983, Garriott, was launched into space aboard the space ship Columbia for the STS-9 mission. It was the Spacelab 1 mission and Garriott brought along the first Amateur Radio station on a crew-tended space vehicle. It was a simple Motorola hand held transceiver connected to a special antenna designed to fit in the Space Shuttle’s window.

Three days later, W5LFL came on the air and hams across the United States and around the world were witness to a historic radio transmission:

--
Owen Garriott W5LFL: “This is W5LFL in Columbia. W5LFL in Columbia orbiting the Earth at an altitude of 135 nautical miles passing over the U.S. West Coast and calling CQ.”
--

Among those who heard Owen Garriott's Amateur Radio transmissions from space was Lance Collister, WA1JXN of Frenchtown Montana. Collister, who is now W7GJ, is credited with being the first amateur to work an astronaut in orbit. Take a listen:

--
Lance Collister WA1JXN/W7GJ: “W5LFL on Columbia, WA1JXN, W-A-1-Japan - Xray-Norway, WA1JXN Frenchtown Montana standing by.”

Owen Garriott, W5LFL: “Hello W1JXN, WA1JXN, WA1-Juliet-Xray-November. This is W5LFL. You’re our first contact from orbit. WA1JXN, how do you read? Over?”
--

The success of Garriott’s mission lead to the development of SAREX -- The Shuttle Amateur Radio Experiment. And, over the years, SAREX permitted youngsters in classrooms around the world to speak directly with astronauts in space. But for this to happen, the technology of manned ham radio operations from space had to be enhanced. This aspect of the then new SAREX program fell to the next ham radio operator orbited: Tony England, W0ORE.

W0ORE flew into space on the shuttle Challenger in 1985. It was Mission 51F, Spscelab 2. In addition to the 2 meter FM voice gear, Tony England also had with him the first ever ham television station to go into space. Slow Scan yes, but capable of sending back high resolution images which hams on the ground equipped with SSTV gear could view live or record on a simple audio cassette for later viewing and historical archiving. From space, Tony England described the station he was using:

--
Tony England, W0ORE: “Essentially we’ve got a commercial TV camera that anyone could go out to their local radio store ant buy. We feed this into a scan converter built by a commercial outfit and modified by NASA Amateur Radio clubs and this takes a snapshot of the scene and digitizes it and put it in a memory.

Then its sent to a handie-talkie like this. From there we will send it over a wire up to the upper window upstairs and to this antenna when I get it up there in the window. Then it will be transmitted to the ground.

When we get going, we will be able to send color TV images of what we are doing on board as a series of snapshots updated every 10 or 20 seconds. Amateurs anywhere on the ground will be able to receive them, and ones with scan converters will see the pictures.”
--

That flight also marked another first. The first ever two way television -- ham radio television -- to and from space.

Tony England went on to flight prove both the improved FM voice and then new SSTV systems. The SSTV was so successful that NASA gave very serious consideration to a permanent installation on all shuttles for back up communications. More important, the early on-orbit operations by Own Garriott W5LFL and Tony England W0ORE made possible the thousands of educational contacts between children in school classrooms and the crews flying in space. First, on board the shuttles, and now as a permanent part of the International Space Station.

Hap Holly KC9RP, Alan Waller K3TKJ, Owen Garriott W5LFL and Tony England W0ORE will receive their honors at the Hamvention Awards Banquet slated for Saturday evening, May 18th at the Nutter Center in Dayton Ohio. Amateur Radio Newsline will be there to bring you this story and all the news about Hamvention 2002. (ARNewsline™ from Dayton Hamvention® news release. Some audio from “Amateur Radio’s Newest Frontier” and “SAREX - The Shuttle Amateur Radio Experiment” video presentations)

RADIO RULES: FCC RESUMES VANITY PROCESSING

Vanity license processing is getting back on tract. According to a Legaue bulletin the FCC now has all outstanding vanity applications filed last October in hand and is ready to resume routine vanity processing. Until recently a single missing vanity application had been holding up a backlog of more than 2000 vanity applications. The FCC credits the ARRL in part with helping to locate applicants and resolving the problem. (ARRL, FCC)

**

RESCUE RADIO: AMATEUR RADIO EMERGENCY COMMS SUMMIT

The first ever Amateur Radio Emergency Communications summit was held in Indianapolis last week. Amateur News Weekly’s Jack Parker, W8ISH, reports on the success of this first meeting.

--
They came from the Red Cross, Salvation Army, ARES, RACES and even CB-radio’s REACT team. Two dozen representatives of different Amateur Radio emergency communications groups met in a Federal Building training room to find ways of helping local and state emergency management organizations. The summit was organized by Marion County ARES director Mike Palmer, N9FEB. Palmer cited a need to develop better communications and cooperation between the different groups.

Many amateurs wear two or three different hats when it comes to providing public service. Palmer wants to identify those who are willing to help and to better utilize the voice and data communications available in the Marion County Amateur Radio Community. Many of the summit participants agreed this type of effort is long overdue.

Members of Army-Navy and Air Force Mars, as well as the Indiana Wing of the Civil Air Patrol offered their services during times of disaster. Everyone agreed this was a good start and look forward to future efforts to better train and organize Amateur Radio Emergency Communications in Marion County and Central Indiana.

Reporting from Indianapolis for Amateur News Weekly, this is Jack Parker W8ISH.

--

According to Jack, everyone came away from the meeting knowing that cooperation between groups is a key element in providing better service to the public. (ANW)

**

RADIO RULES: FCC ADOPTS AMBER EAS EVENT CODE FOR CHILD ABDUCTION CASES
The Federal Communications Commission has announced the adoption of a Report and Order amending the Emergency Alert System rules. Included are several new EAS event and location codes, which broadcast stations and cable systems may use to alert the public in the event of state and local emergencies. Of these, a new Child Abduction Emergency event code may be the most interesting to hams involved in Search and Rescue and who have E-A-S decoders installed in their repeaters.

The plan is described as a voluntary partnership between law enforcement agencies and the media that will be used to alert the public of serious child abduction cases where police believe that the child is in danger of bodily harm or death. Under the plan, radio and television stations will be permitted but not required to interrupt programming to disseminate information concerning serious child abductions when the new Child Abduction Emergency code is received. It could also be used by hams as an automated call to action to help find a missing child if used to activate an E-A-S equipped Amateur Service repeater.

Police departments say that every minute counts in dealing with an abducted child situation. In adding the Child Abduction Emergency code the FCC says that its responding to public concerns. (FCC)

**

ENFORCEMENT: FCC COMPLETES GEORGIA ARRL VEC EXAM SESSION AUDIT

The FCC has wrapped up an investigation into apparent irregularities at five ARRL VEC-sponsored Amateur Radio examination sessions in Georgia during 2000 and 2001. As a result of the probe, FCC Special Counsel Riley Hollingsworth says that several examinees will be called back for partial retesting:

--
Riley Hollingsworth: “We determined reviewing all of the information that was brought to our by the League that eight examinees will have to be retested on the code element. The ARRL has also relieved ten VE’s of their duties as volunteer examiners.”
--

According to the ARRL Letter, all V-E’s who might have been involved were suspended after the FCC investigation began last year. (FCC, RAIN)

**

ENFORCEMENT: A REPEATER OUTSIDE OF THE BAND

The FCC is also looking at the operation of repeater in the Metro New York City area. Again, the FCC’s Riley Hollingsworth:

--
Riley Hollingsworth: “We opened an inquiry into allegations that an uncoordinated repeater operated by Thomas Batista, KC2DDD, and Gerardo Arias, N2IFU, in Corona and Staten Island New York. Now that repeater is not only causing interference to a coordinted repeater, but the input is apparently on a frequency not even allocated to the Amateur band. So, needless to say we are real interested in reviewing that response when it comes in.
--

What Hollingsworth will be looking for is an answer to why the machine is using 143.020 MHz as an input frequency as well as why its on the air without coordination. 143.020 MHz is a full 800 Kilohertz below the bottom edge of the 2 meter Amateur band. (FCC, RAIN)

**

CONVENTIONS: SOUTH EAST VHF SOCIETY CONFERENCE

On a far lighter note, the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27th in Oak Ridge, Tennessee. And they too are putting out a call for papers. If you are interested in participating, please contact KG4QDZ by e-mail to kg4qdz@arrl.net. (VHF Reflector)

**

CONVENTIONS: CHARLESTON HAMFEST MARCH 16

And the 18th Annual Charleston Area Hamfest and Computer Show will be held Saturday, March 16, 2002 from 9 AM to 3 PM at the Coonskin Armory in Charleston, West Virginia. Talk-in is on the 145.35 MHz repeater. Admission is $5 and there will be free parking. More information is available by e-mail to n8tmw@arrl.net. (N8TMW)

HAM RADIO POLITICS: NCI LEADER CALLS FOR ELECTIONS

Bruce Perens, K6BP, the founder and an incumbent director of No Code International says that its time for new directions for the group and has called for elections. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--
According to Bruce Perins, K6BP, when he started NCI in 1997, he never dreamed that it's goals would be achieved so quickly. But says Perins; "we are most of the way there."

Perins notes that last year the International Amateur Radio Union voted to ask for the removal of the international treaty provision requiring Morse Code testing for Radio Amateurs. Now Perins observes that even ARRL has voted in favor of removing code requirements from the international Radio Regulations.

With what he terms as -- no remaining credible opposition to NCI's cause left on the international level -- Perins says that it is time to turn NCI's focus to domestic policy. He says that for NCI to take an appropriate role in the end-game of the no-code battle means cooperation with national societies like the American Radio Relay League. And to do this, Perrins believes may take some new people.

So Perins has asked that an election for new directors be held no later than April 30th of this year. He also says that any person who was an NCI member on December 31, 2001 can be a candidate for director, and is eligible to vote in the election.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

More information about No Code International is on the web at www.nocode.org. (ARNewsline with information from K6BP)

DX

In D-X, word that Dave Cree, G3TBK, has returned to work in the Caribbean. Throughout March Dave will be active as J88DR from St. Vincent. For the first two weeks of April look for him J3 slash G3TBK from Grenada. Operations will be on all bands, but concentrating on the WARC bands, mostly on C-W, but with some SSB. QSL to Dave's home call either direct or via the RSGB bureau. (RSGB)

The New Zealand Amateur Transmitters Society is warning hams world wide of what they say is a pirate operation. According the NZART News, a maritime mobile station using the callsign ZL2TO and the name Tony has been heard recently operating on nets on 15 Meters. This station currently gives his location as the Cape Verde Islands. Only one problem. The ZL2TO call sign is allocated the Waitara Amateur Radio Club. (NZART)

And the South Africa Radio League news service says that anyone who has held a QSO's with 7Q8 slash ZS6GH or C9 slash ZS6GH should write them off . SARL says that these have been declared null and void because license or authorization to operate was issued by the telecommunications regulators in Malawi or Mozambique. (SARL)

**

THAT FINAL ITEM: NOMINATIONS SOUGHT FOR THE YOUNG HAM OF THE YEAR AWARD

And finally, we started this weeks newscast with a story about awards. Lets end it on a similar note as we here a Amateur Radio Newsline officially open the 2002 nominating season for our own Young Ham of the Year Award.

The Young Ham of the Year award was created in 1986 by amateur Radio Newsline producer Bill Pasternak, WA6ITF, to fill what he viewed as a void where younger members of ham radio society were often overlooked:

--
Bill Pasternak, WA6ITF: “When I was a young ham in the 50’s and 60’s the good deeds of young hams were often overlooked and ignored. When I grew up I was fortunate enough to be in a position to remedy this and thats how the Young Ham of the Year Award program came about. Thats how it came into being”
--

The award as originally envisioned as very low budget. One idea was for a certificate that would be mailed to a ham, age 18 or younger who had shown some exceptional ability or performed some heroic deed that set him or her apart from the crowd. When Bill mentioned the idea to Chip Margelli K7JA, of Vertex Standard back in the company’s days as Yaesu USA, the idea quickly expanded. Margelli offered company support on the spot:

--
Chip Margelli, K7JA: “When Bill Pasternak gave me a call and dsescribed the project to me in the tiniest bit of detail it was obvious that this was a no-brainer and something that we as a company at Yaesu wanted to encourage. So, I jumped at the opportunity to be a major contributor and it has been a great project ever since.”
--

The award now had substance, but it lacked a permanent home. One was found in 1993 when it was invited to the Huntsville Hamfest:

--
Bill Pasternak, WA6ITF: “The way we got to Huntsville? Simple. We advertised. We put a notice into the newscast that we were searching for a permanent home. The answer came in a note from Scotty Neustadter, now W4WW, who is the Huntsville Hamfest Chairman. Scotty basically said bring it to Huntsville. And we did.”
--

While the presentation ceremony did go to Seaside Oregon in 1994, it returned to Huntsville in 1995 where it has been ever since. And in 1996 a second major corporate underwriter came on board. C-Q Magazine. Rich Moseson W2VU, is editor:

--
Rich Moseson, W2VU: “We at CQ have always thought that it is very important to promote Amateur Radio to young people and we saw that co-sponsorship of the award was the way to help do that.
--

What CQ did was to add to the Young Ham of the Year awards chest something very special. A week of fun and excitement at Spacecamp. Today, with corporate sponsorship from Vertex-Standard USA and CQ Magazine, and support from countless others including the ARRL, Dave Bell Associates and Rosewood Communications the Young Ham of the Year Award continues to honor the Amateur Radio related achievements of those hams age 18 or younger. And now its time to find a fitting recipient for 2002.

Full details, rules and a nominating form are available right now on our website at www.arnewsline.org. Just scroll down to the Young Ham of the Year Award area and click to download. Or you can send a self addressed stamped envelope to the 2002 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350 and we will mail back the materials.

The Amateur Radio Newsline Young Ham of the Year Award is a one of a kind. It honors the youth of ham radio and in doing so, we hope it helps to insure a bright future for the hobby and the radio service that all of us love. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, another reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

I just added a Johnson Ranger to my station, and I was wondering about using it to drive my Heath SB-200 amplifier on AM. Anyone have advice or opinions on this? Obviously the 40 Watts output from the Ranger won't drive the amp to a full KW, and I wouldn't want to run the amp at more than 200 - 300 Watts at 100% duty cycle anyway. Let's hear from folks with EXPERIENCE with using the SB-200 on AM.

I have an SP-600 that is starting to show slippage when turning the main tuning dial. It looks like a brass or steel pulley driving the metal 'Bandspread" dial. I cannot see any way to adjust this pullley or make it tighter. Someone in the past has tried to "Rough Up" the pulley as I did but it only works for a time. What is the correct way to deal with this? Are new pulleys available? Is there a way to adjust the tension? Another problem is instability on CW. Almost as bad as a chirp with the BFO on. P.S. This radio really sounds much better than I remember on AM!

Thanks,

Tony WA6LZH

> tuning dial.

Tony,
I currently have an SP-600 all torn apart on the bench. The dial drive pulley is pressed against the dial plate by a (in my view) somewhat hokey method.

The dial drive pulley is set in a bearing that rides on a trianglar plate that has 3 mounting pins, one at each corner of the plate. These pins have approx 1/16" freedom of movement in any direction. The shaft that supports the pulley has a small hole or dimple in it that accepts one end of an 'S' shaped spring the other end being set in a pin on the chassis. This applys pressure to the mechenisum, keeping the groove in the pulley pressed against the edge of the dial plate (sort of). ;)

Getting at all of this requires quite a lot of disasembly, but in my case it had to be done anyway as ALL the gears were frozen in place 'cause this radio had been left out in the rain. :((

Hope this helps.
P.S. I have always wondered if there should be a bubber band set in the groove of the dial drive pulley as it seems the metal-on-metal method of drive is begging for trouble.

Tony,
This is a common problem with SP-600's. The problem is (most likely)
the BFO coil coming loose inside the BFO box. Doug Blakeslee
mentioned this in his QST article way back when. The cure is to
remove the BFO assembly (not fun, but not as bad as pulling the
RF deck) and glue the coil in place, checking for any
loosened wires and hardware at the same time. I finally got around
to it on mine, and CW is fun to listen to again.

You can only run it at 150 watts out on AM. And that needs to be at about 33% efficent. The input power will be about 450 watts with 150 out. The amp needs to be loaded up at the 1 kw input level with 600 watts out. Then the drive is reduced until you have 150 watts out. As AM has PEP level that is 4 times the carrier the amp needs to be tuned at the pep power level. Once it is tuned at the 600 watt out level do NOT retune it when you reduce the drive so that it gives you 150 watts out.

Tony:

The dial-train slippage you are experiencing is probably due to grease
or oil getting on the friction-drive components. The gear train
should never be oiled or greased. The lube will migrate to the
friction-drive components and cause slipping. Try degreasing the
bandspread dial edge and driving wheel. It is not necessary to "rough
up" or bend anything to get the dial to function properly. Don't try
to "tighten up" the spring. If everything is clean and oil-free, the
dial will perform properly.

You'll want to be more specific about what you mean by "...200-300 Watts...." because the limiting factors will be the efficiency at the class the SB-200 opperates at AND the plate disipation of the, I think, pair of 572-Bs/T-160L in it. These tubes, if I remember correctly, are capable of 160 watts of disipation. At two tubes, that will be 320 watts of dissipation, leaving, for example 160 left for RF output, which means something like 100 for carrier and 60 for both sidebands (30 each). This also means DC plate input of around 320 w (which goes to heat) plus 100 w going in and coming out as carrier RF (as when you are not talking). In the end, you are talking about roughly 3 db extra "talk power" plus or minus. I'm not sure the power supply will be good for the 400+ watts continuous duty that AMers often find themselves doing (long transmissions). You would do well to check the efficiency and class (if its class B, things will be a lot better).

Johnson also had a Courier linear with two 811As and talked about a roughly 3 db gain when used with a Ranger. 811s had only 65 watts of plate dissipation, however.

Good luck.

I have a local noise problem I am hoping someone can help me track down. I hear

S-6 or 7 loud, 'coarse' has on all HF bands, on all frequencies, though the intensity of noise diminishes somewhat on higher bands. On 40M, my main band, it is all but intolerable, making QSOs with all but the loudest stations difficult, even at 12 WPM or so.

The noise comes on for exactly 2' 15", and goes off for exactly 1' 25". Over and

over. I have timed it many times over two weeks. The noise is only there after dark. Aha! But I have searched and searched for an intermittent streetlight, to no avail. I have gone about three blocks in all directions from the house in this search, and also looked for automatic driveway/porch lights nearby, but can't find any. What the &*%$ can this be!?? I am really puzzled by the exact timing, since it would seem that a streetlight malfunctioning wouldn't do this, and a driveway light might stay ON for a specific time, but not off! HELP!

does anyone know the amps needed for this for the 6.3 vac input?

the schematic doesnt say :(

looking at the schematic its going to be running 4-6af4 and 4-5654
6af4 runs @ .225 and 5654 runs @ .175 so should i get a Filament at
1.6 amps? i dont see any resistors just some caps.

allso this schematic says the other input is 300 volts dc that doesnt
seam right is it?for the tubes listed above.
only reistors to one 6af4 is 10k-5watts.
6af4 as max volts of 150. do you think it would work off 115?

this old tube stuff is new to me :) but its great fun

thank you for any help.
im posting off deja(because my isp doesnt have a newgroup) it will be
slow to reply but check back in day or so after the post if you ask me
questions.

if you need to emailme for somthing send to sendblahbalhkeys@yahoo.com
remove BLAHBLAH to make "sendkeys" (might help the spam?hehe)
thank you.

I am just putting the front panel back on my SP-600

Cleaning the edge of the Bandspread dial helped for a while when mine was
slipping, but then it eventuallyi it stopped tuning completely.

My problen was the grease on the idler wheel between the tuning wheel and
the banspread dial had way to much friction from the grease geeting hard.

Cleaned that off and it works fine. If you cruise the ham bands and would
like a little better freq. readout Rock-Sea sells a bandspread dial that
mounts on top of the stock one. It doesn't cover the logging scale.

Suggest you put your transceiver on a 12V battery or borrow a SW receiver and go hunting. Use a loop or small 3 element yagi and you should be able to pinpoint the source with no problem. To eliminate something in your own QTH, turn your power off at the main while listening to the noise.

Skip the SW receiver, and get a cheap handheld AM radio. If you can hear it on 160M, you can hear it on AM broadcast as well. The loopstick antenna on a typical cheap transistor radio is fairly directional and you can use it to effectively triangulate the source of the signal if it's something like a failing pole pig or streetlight.

If it's something inside the house, it will get hash into the power line and it'll appear to be coming from everywhere. In that case, you can start popping breakers one at a time until the noise disappears and then see what is on that breaker.

Gary is right.

Tune the amp up at full output then reduce the drive till the plate current meter is at 200 mA carrier only. Also verify the grid current reading. It should be about 1.5 mA or less for continuous AM operation. The amp will get very warm even at this setting if you make long transmissions on AM mode.

This will give you 125 to 145 watts of RF output into a 50 ohm load. Be sure that the load that the amp sees is 50 ohms non-reactive.

I ran an SB-200 this way on AM years ago and had no problems. Never lost the power transformer running this way. The efficiency is poor but it beats the carrier output you will get out of an exciter that runs a pair of 6146 or similar tubes.

Will,

I've been an RFI investigator for a power company for almost 23 years. If that noise is timed that precisely, I can almost guarantee it is NOT power line related. If it were, it would be much more erratic with unpredicatable timing sequences. Loose hardware, noise end bell insulators, and very rarely, lightning arrestors will be suspects. Plus the weather would have an impact on your noise in most cases.

In your case, I would do like another poster suggested, grab a shortwave radio, one with an RF gain control would be best. Even better would be a receiver capable of receiving the VHF AM aircraft band. The idea here is that the closer you are to the source of the noise, the higher in frequency you will hear it. Avoid the temptation of holding your radio against or very near a utility pole. Being that close to a pole ground or "risers" from underground facilities will just increase your coupling to the noise and will throw you a curve.

After you eliminated your own house (pull the main for a quick check), grab your radios(s) and take a walk down the street. Your search will be more accurate if you keep the radio in the same position (polarized) and maintain an adequate distance from other objects as you do your patrolling. Once you hit a hot spot along the street, try the same thing on the other side of the street. It will soon become apparent when you are getting closer. Using the VHF radio will narrow your search to a more precise area.

Two things to keep in mind. First, unless you know your neighbors, don't go walking through yards to get "closer" to houses. If you suspect a particular home, knock on the door and explain your problem. Have ID with you. Chances are very good that if you found the right house, these people have this noise in their stereos, cable TV reception, and even telephone (cordless or not). They may be glad to find the source too. If no cooperation, contact your local power company, although they have no jurisdiction when the fault lies inside a home. But sometimes (I do this at times) they will knock on the door anyway. Most times the customers will work with me, especially if they also have the problem.

Second thing. Do NOT go hitting poles with a hammer to see if it "quiets" them down. I see this posted on newsgroups now and then. If there is something wrong up on top of the pole, the last thing you want to do is disturb it. I have seen insulators fall, lightning arrestors blow and shatter, transformer cutout switches open, and even wires come loose causing power interruptions. I don't have to suggest what would happen if a live wire would come to the ground. In some

areas, if you are caught hitting the poles, the power company may prosecute. My company will.

I hope this helps. Feel free to email me if I can help you any further.

John

# 2496. FS Racal RA-17C-12 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-12 15:51:05 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <Jtpj8.14439$Vx1.1189395@newsread1.prod.itd.earthlink.net>
Source record: 43724

Racal RA-17C-12 Communications Receiver for sale. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors, etc. It is all original. It is in very nice shape with top cover, copy of manual, and Racal Brochure. Stability is super with the Wadley Loop. See on page 329 of Osterman. It is listed as "scarce". This is one of the best receivers I have ever used. This one is in very nice shape and works exceptionally
well. I need some room, so it is up for sale.
Price is $675 picked up in Abilene, Texas, or I can meet someone within 200 miles of Abilene, or I can deliver it to the Midland, Weatherford, or Belton hamfests coming up soon. Digital Pictures are available of this receiver upon request.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

# 2497. WTB: Tuning knobs for Hallicrafters SX-99 receiver

These are the knobs for the "Tuning" and "Bandspread" dials,
Hallicrafters part 15B802.

Please e-mail me at msenecal1@juno.com if you have any.

Thanks!

# 2498. Re: SP-600 Dial Drive Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-12 17:36:24 UTC
From: Tony Angerame <tangeram@lucent.com>
Message-ID: <a6le32$5uj@nntpa.cb.lucent.com>
Source record: 43726

The slippage in the SP-600 dial drive as directly related to the amount of oil or lubrican present anywhere near the dial drive pulley. I found that even lubing the shaft, with WD-40, caused enough to be dispersed to the pulley(s). A good cleaning with q-tips, alchohol and a fast drying spray solvent did the trick. The dial drive is now quite positive and as smooth as ever. Many thanks to all that responded.

Now the "Chirpy CW" problem is a little harder to resolve. Some suggested that the BFO coil was loose but this was not the case. I subbed my signal genrator for the bfo with no luck and a crystal for the hfo which noticebly improved the problem. Suspecting the HFO I did a quick check and found that the lead, through a feddthrough, to the FFO had DC on it. Opened up one or two of the alignment holes on the RF deck and found the infamous little black caps. Seems like these were never changed in this part of the receiver, only below chassis. Also the amount of chirp is pretty much proprtional to the amount of dc I see on this lead. I'll recap when I can have time to remove the deck and do it right.

If anyone has suggestions or advice on recapping the RF deck I'd like to hear it.

Meanwhile AM sure sounds good on this radio.

Tony WA6LZH

# 2499. Re: RG-62/AU coax for HT-44 transcieve

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-12 18:01:08 UTC

Message-ID: <Enrj8.28056$q2.2642@sccrnsc01>
Source record: 43727

Readily available from computer networking or IBM computer dealers.

RG-62/AU was used for IBM 3270 connections to 3174/3274 cluster controllers. Many large data center operations threw out hundreds of miles of this in the past 10 years as they upgraded to network based connections.

This cable was also used for ARCnet LAN connections (Datapoint) in the 1980's. Again surplus stores use to have miles of it, with a very small market demand.

Will, if you can choose between an AM radio and a shortwave radio,
take the shortwave. You need to move higher in frequency to limit the
range of your hearing. And if the shortwave radio has an RF gain
control, all the better.

AM radios are great if you are in the house you suspect to be the
cause of your troubles and want to use it to listen to when you flip
breakers. Out in the street, that AM radio is going to hear a mess of
noise, unless the noise you are looking for stands out above the rest.

That seems to be typical of lots of radios, especially those made for the military, even more if during wartime. Use up what you got.

Mine definitely says S36A embossed on the dial cover.

>Some early S-36 sets had the panadaptor jack on the side, later sets seem to
>be located on the rear next to the ant. binding post, it is a so239
>connector.
>I notice that my S-36A manual doesn't show one at all.

No Pan output anywhere on mine. Say, I wonder how many guys tried putting their antenna into that SO-239 and wondered why the radio was so deaf. Wish I had a spare tube for every time I've done that to some of my other radios with IF outputs :-)

>my set seems to be in pretty good shape all of the tubes test very good and
>a alignment did wonders for mine. Still I am going to replace the acorn
>tubes and see if it will help. I notice that a good ant seems to help things
>along also.

Mine is pretty poor in sensitivity, no background noise, barely gets the FM stations and a few CBers. I've been advised to go under it and check out all hte screen dropping resistors and bypass caps, just like any other old set. Haven't done it yet, but after a month of working out at the Y every other day, I may feel up to more BA projects :-) -- 73, Mike K. AA1UK

>really sounds much better than I remember on AM!

Some radios chirp on CW if you leave the AGC on -- many local oscillators vary a little bit with changes in RF gain, either manually or from the AGC voltage.

On lots of vintage sets, I've learned to kill the AGC before trying to tune SSB, otherwise the pumping AGC slews the pitch around.

ISTR that my SP-600 is above such annoying problems, but wouldn't bet on it. BTW, the alignment hole sin my RF decks show nice bright orange where the Black Uglies used to be, whew!

Say, anyone got an exact replacement BFO toggle switch, or should I just put in a "close match?" Thanks --Mike K. AA1UK

The S-36 is definately a heavy radio. Mine worked slightly worse than what you describe when I first got it. Most of the problems were in the IF section, bad capacitors and resistors. The advice you mention is very good advice, that's pretty much what was wrong with mine. I get about 3 microvolts for 20dB S/N on the middle band. I think that's about what it did when it was new.

I am selling 6V3A tubes in oversized padded military boxes. These are indirectly heated rectifiers, 1961-62 date codes. Lots of GE, some Philco/Lansdale.

I have a picture posted at;

http://members.aol.com/ecc81/yardsale

$ 2 each
I have about 50 available

If interested, PLEASE RESPOND BY EMAIL to < OvrReactor@aol.com >

Regards,
Tom Mitchell

Could it be a traffic light? Maybe they are starting to use gas-discharge
lamps, which could be the cuplprit, if the Red one is noisy and the Green one
is quiet.

Source record: 43650

It is also possible to have drive slippage on well-used earlier sets when everything else is right and oil-less, just from wear. You will note that the groved friction idler is on a sprung plate restrained by its mounting posts. When there is no longer enough travel to insure drive friction, it may be increased by driving the posts toward the driven disc with a drift. These rcvrs were subject to depot overhaul regularly, so such worn parts would have been replaced in MIL service. Unfortunately the idler plate is not a separate call-out, and is part of the whole front plate. - f.

Hi Tony & all,
The SP-600's are great rcvrs. I'm on my 5th & 6th right now, have
redone 4 in the last 3 yrs.
Take a look at my website:
http://www.thecompendium.net/radio/
for a great article by Ray Vasek, W2EC, on recapping, etc. Those BBOD's
(Black Beauties Of Death) will all go bad, 1 by 1, if you dont' replace then
all. There are some in the IF xfmrs & a few hard to find spots. The RF
deck is some work, but not hard, to get off (take notes), the manual tells
how. To work on it, it helps to have a very small bench vice to hold it
while you work. Don't forget to ck the removeable units in the turret.
Several have BBOD's. If you don't have a manual, you should. I can supply
a copy of the -JX-17 manual, which is big, & about the best.
Also take a look at:
http://www.hammarlund.info/
for Hammarlund info. That site is in the process of "reconstruction" by new
"owners". We hope to have downloadable manuals on there in the future.

I have seen several good suggestions so here is mine.

Obviously what ever it is it is on a timer.. Check for low voltage yard lights. These are on a timer. (The time could be wrong due to power failures etc.) Some of the new low voltage DC devices have switching power supplies to save weight. They can be really loud. Zero or little filtering to save costs. Use the suggestions about using an AM radio to locate the source after turning off all our breakers to make sure you have a clean house.

There is a small under the counter light system on the market that uses a dc switching supply. It is 20 over in my shack when they are one. The power supply looks like a large wall wart. but it is DC and 4 amps. I just took them out and trashed them.

Not necessiarily a timer as we normally thing of them.
It could be a programable thermostat.
The timing sounds wrong for signs, but it's that on/off cycle ... I it's a
traffic light then it has the longest cycle I've heard...over two minutes..
Unless it's one of those multiple way systems..

> Check for low voltage yard lights.
> These are on a timer. (The time could be wrong due to power failures
etc.)

These are usually on after dark, or turned on whit a timer, but don't cycle.

It could be a malfuncioning light sensor for outdoor lighting.

Some
> of the new low voltage DC devices have switching power supplies to save
weight.
> They can be really loud. Zero or little filtering to save costs. Use the

Pumps, heaters, light sensitive devices, door bells, remote sensors, motion
sensors, computer systems (networks/wireless)

The list goes on and one...Even insulators on power lines illuminated by
signs, or flashing lights...However lights don't usually have as long a
cycle as mentioned.

Sounds more like a heater.

No, but the highest I've ever seen one for on e-bay was a mint unit at
either $3500, or $3700 and that was back when money was far more readily
available.

Some one might want it that bad, but not me. <:-))

Everything suggested is good... here is my two cents...

To get more directivity from your AM radio... place it inside a tin can. The open end is the only way sigs can get in. Hold can chest high with the open end facing out and slowly rotate your body to find the direction the QRM is coming from.

When you get close to the QRM source, cover the opening with sheet metal with a 1/2" hole. It will point you right to the source.

I have done this many times. Last time it was an automatic heater in an aquarium a few doors down. The 20' extension cord made a really great antenna!

Don't overlook the possibility of a flaky solder joint. They do
show up from time to time, and that problem could easily be caused by
current flowing through a joint gone defective over time. It happens.

Dick

*UNLIKELY*.

'standard' timing for the 'yellow' is seven seconds.

If it was 'Don't Walk' vs "Walk" signals, it's a little closer to the realm
of reason.

But it's an awfully -long- cycle at 3 minutes 40 seconds.

And doesn't explain why it -only- happens at night.

Well, that really is too funny! He sort of brought it on himself by responding to the price checkers at all, directly or indirectly. Best to ignore them.

I was wondering how an unregistere eBay user gets to bid at all? I sure wouldn't accept such a bid.

73,

Casey

Don't know which Viceroy I got. I've got a circuit for Viceroy Mark IIIg.
It needs some work on it to become more legible. When I do that I can send
you a copy if you wish.

Alternatively for a manual and circuit you may try:

gerry@g3ogk.freeserve.co.uk

Rich.

Hi all,
Here is a request that may be hard to fill. Needed very badly, both the
tuning knob, and the bandspread knob for a Hallicrafters SX-11, or 10.
Possibly some others will work as well. I know, there are very few of these
old radios around anymore, but I have to keep trying.
Thanks to all who helped with the service info on this radio.

Boy that's old..
I remember Alan GW3ACF had one.. had gold plated pins on the valves in the front end to reduce noise

That was back in the late 60's.. He also had a AR88 and an Admiralty GC radio.. tryng to remember the number now.. CR100?
He used to test the radio by touching the top caps with his finger and listen for hum......

Great guy.. had a Zepp in shack which he used to tune using a neon on each leg and balance the light intensity..

Built everything himself but receivers.. "couldn't build anything to touch the KW77"

Try www.mods.dk but not hopefull with that vintage..

# 2571. FS: Zenith TransOceanic R-520/URR prototype

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-14 21:45:45 UTC
From: Phil Nelson <philnelson@antiqueradio.org>
Message-ID: <dS8k8.19505$Vx1.1694597@newsread1.prod.itd.earthlink.net>
Source record: 43548

I have been contacted by a former senior design engineer from Zenith who has an interesting radio for sale. It looks like an R-520/URR with the olive drab case. In his words, it is "a pre-production engineering model hand built in the Zenith Engineering Model shop, probably in 1952, therefore it carries no model number, serial number, or Signal Corps ID."

This fellow believes the unit was taken from the production line during the Korean War to try out a minor circuit change. He saved the radio from being discarded by Zenith Engineering around 1959 and he has owned it ever since. He says it is operational but needs cleaning of scratchy volume control, etc.

I have seen a couple of photos. The radio certainly looks like what he says. It doesn't have a spare tube caddy in the back cover. I don't know enough about the R-520/URR to comment further on the appearance.

If anyone is interested in contacting this seller, please email me directly and I'll give you his email address. I don't know this guy -- just thought someone might be interested in this unusual TransOceanic.

Regards,

Phil

Still have available a Ten Tec Triton 540. This was gone through completely at Ten Tec within the last 1 1/2 years including new drivers and finals, full alignment, and the PTO rebuild. Cost was $229.00. I also have a remote 242 VFO to be sold ONLY with the radio as they are a bit scarce and it took me a year to find one. The rig has the noise blanker board, the cw filter board, matching vox power supply, and I'll add a D104/ G stand with it. Overall condition is very good and ofcourse the qsk is great. SSB very good too. Price is $400.00 firm or I would sell it without the vfo and mic for less $. Thanks for the read- 73s Lew KlNDV

Well, for now I think I do not need an e-zee match. (Although somewhere along the line I probably will need some atu type parts).No doubt if others read this thread and are interested they will give you a shout. What is the junctions 28 rally? Rich.

# 2576. WTB Manual or copy Globe DSB100 and Globe VHF 6N2

# 2581. SX-28 Info and part

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-15 03:57:14 UTC
From: xxx@xxx.com
Message-ID: <k8s29uc5fgfvk491gcbi5o13kuc57hlous@4ax.com>
Source record: 43559

I am in the process of rebuilding my SX-28 from the ground up and
have run into a snag
This particular set has been the subject of an overdose of TLC and
consequently
much of it is non-standard. I have succeeded in the main with the
rewiring and
replacement of most of the smaller components, now I find myself
unable to fit
the temp compensation capacitor (C13) because I dont know its actual
correct
physical location, in my set it had been mounted on the frame of the
main tuning
capacitor and soldered in parallel with C2. I have no problem with
putting it in the
circuit in the right place it is the mounting position that I require
Can some one please enlighten me

Also I am in the market for a padder capacitor C8 which has been
removed from my set
and replaced with a fixed mica cap. The part no. for this padder is
44B061 and its
nominal value is 2962 pF If you have this cap in a parts set could
you please let me know
Thanks
Greg in South Oz

I've never seen a real one, but the picture shows a few distinctive
traits: a fuse holder, a ballast tube, and
tube shields.

Either it's a real R-520, or a good imitation. :)

Now wether a prototype is worth MORE because of it's uniqueness,
or LESS for not being "stock" is debatable. It all depends on the
attitude of the buyer.

John,Its not about money for a days work for Sindre,I am the one whp
invited Sindre,to be part of the Drake Forum,we have had a overfilled
crowd at the Dayton Hamvention,due to having the World's largest Drake
collector,to give us a presentation,on all the gear Drake Made..
Every one in attendance gave this man a round of applause when he was
done,it gave us a chance to see some of the older rigs,we would never
otherwise been able to see.
Sindre,lives in Norway,do you realize how much it would cost for that
trip???We can not expect him to pay all the expenses out of his
pocket..
I started the raffle 3 years ago,with a Drake l4-b amp,can you think
how proud you would be to win a amp for 25.00??
All of us in attendance will support this,if you don't realize what
is going on,maybe you should look at one of the videos made at the
forum,to see how happy everyone was...Why don't you buy a ticket and
come on in with one of the best forum's at Dayton..Don..w8ns

Among other stations they were part of GRC-106A installations in radio shelters. The meter has an internal dummy load good for probably 250 watts or so, IIRC.

Yeah, I gave that some thought when the guy first contacted me. I finally decided I'd rather have a stock unit (and to be honest, I've never been especially interested in the military version). On the other hand, if this really is a R-520/URR engineering prototype, it could be the only one left in the world -- the rarest of the rare, in a sense. It really depends on what someone is looking for, as you say.

I believe the grille is plain old steel. I have two PM-23s, one with the chrome 'h' and the other without. The 'h' is nice and shiny and looks completely different from the grille metal. The grille attracts a magnet, has discoloration and some rust, and doesn't look painted. I think I tried some metal polish on one of the grilles without raising a shine, which would also be like steel, I think.

I thought the mil models were built from H-500s. This one looks like a
worked-over 600. Looks like the original tube socket rivets were
drilled out and the sockets replaced with shield-base sockets. Did the
mil spec models shield the 50A1? Wouldn't seem like a good idea since
it gets hot. Guess it could be a prototype, but sans documentation,
could be anything.

Tony,

I too, would like to see some documentation on this meter.

I've been using one as a dummy load for over a year. I dump
up to a kilowatt into it with no ill effects.

The operation is straight forward:

1. Apply power using a constant carrier mode.
2. Switch to "adjust", and use knob under meter
to adjust meter pointer to full scale.
3. Switch to "SWR" and apply power, SWR reading
appears on meter.
4. Switch to "operate".

The neat thing about this meter is that the exciter
always looks into the dummy load when the switch
is in any position other than operate. This ensures
that the transmitter will not be damaged by operating
into an excessively high SWR.

I have taken the cover off mine and looked at those
massive resistors. I'm curious as to what the military
rating of that dummy load is. If I remember correctly,
the AN/GRC-106 RATT rig was good for about 400
watts of RTTY.

As I mentioned, I routinely use this load to test and
tune my TL-922 at about 1 kw or so. Only effect so
far is hot air rising off the load. I even have thought
about cooling the load with a fan, but so far it does
not seem to need that!

If you get any info regarding the ratings of this meter/load,
I for one, would be interested.

Thanks,

Gary, WG7X

Source record: 43593
Cross-posted to: rec.audio.tubes,sci.electronics.components,sci.electronics.misc,rec.radio.amateur.boatanchors

Wanted, to buy or trade:

Part number CD47/GR-414 "Nixie" tubes.
Any quantity. New or used.
Any brand acceptable. Known brand: Rodan (Okaya).

These readout (digital display) tubes are probably the largest "Nixie" style cold-cathode neon discharge numerical indicators ever made in production quantity. Dimensions: displayed digits are 130mm (about 5 1/8 inches) tall, overall size is 210mm (about 8 1/4 inches) tall x 75mm (about 3 inches) in diameter.

They were used where numerical information needed to be readable from considerable distance. I know for certain that one application was large industrial scales (perhaps used for weighing shipping containers or trucks.) Other possible uses include schedule information displays in public transportation terminals such as airports and train stations.

Of the 9 existing examples of this tube type of which I'm aware, 7 were located in Germany and 2 were located in Slovenia. Therefore, I believe that the greatest concentration of these still remaining to be found is most likely in Europe.

For a few images of these tubes, please see
http://home1.gte.net/res0fab4/files/bignix.htm

Finder's Fee (REWARD!) Offer: If you can put me in contact with someone who has one or more of these to sell or trade, I will pay you a finder's fee, the amount of which will be determined by the price, quantity and quality of the tubes I obtain.

Replies by email please. See signature for my real email address; substitute actual punctuation where obvious.

TIA

Beautiful near mint Drake 2NT for sale or trade. Full output into dummy load. no scratches or dings. copper is nice. Original Manual.

I bought this a few weeks ago because it looked so nice. I tuned it up to see if it worked and then put it back in the box. I didn't win the bid on the 2 C that I was trying to get to go with it, so it is available. All boxed up and ready to ship.

Looking to trade for another tube rig to play with. Drake, Collins, Hallicrafters, Swan, Heath, etc. What have you got to trade?

If no takers on a trade, I'll sell for $225 shipped.

Picture available.

Message-ID: <20020316130349.21394.00001974@mb-cv.aol.com>
Source record: 43604

I was recently told that there were some Eimac 3-500Z tubes that had bad plate welds and that this would cause the plate structure to start leaning over after a period of use. Does anyone here know how to identify which Eimac 3-500Z's these were? Also, does anyone have expreience with RF Parts brand 3-500Z's? I have always been advised that Chinese tubes should be avoided but on the other hand, I hear pretty good things about these. I have an old SB-220 and I want to get a set of spares for it. I just don't want to get stuck.

Thanks es 73'

This is being sold as a Parts Rig. It is complete with the exception of no crystals. I did put one in and it did receive . It needs cleaning but as noted all tubes , parts etc. are there. This is of course is the rare version of the final TR4C Drake gear.
Make offer .
thanks
tim

## 2638. Meter Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-16 22:56:09 UTC
From: Michael Melland <w9wis@charter.net>
Message-ID: <u97j6mkajr6jdd@corp.supernews.com>
Source record: 43616

The meter in my otherwise mint Hickock 6000B stopped working correctly. I need either another original meter:

DC - Model 40, 100 micro amp, 1165 ohms

Or advise on where to look for a similar meter. About 4.5" by 3.5" or so....

Any help out there ?

Source record: 43620

If the meter is reading incorrectly are you sure it is a defective meter ?
There are a thousand things more likely to have gone wrong.

If the meter pointer is sticking at some point along the scale then it
should be a simple matter to correct it.

I suggest you don't change the meter until you are sure something drastic
has happened to it such as a burnt-out moving coil. Don't put in a
replacement meter until you are sure what happened to the original.

The chance of finding an exact dimensioned replacement is very remote.

But perhaps you have already done your homework. ;o)

<n3ab@fast.net> wrote in message news:3c91a477.1046942@news.fast.net...
> Please fill us in more on this idea.

Several times I've seen writeups in QST about intermittent noise being traced back to a bad insulator on the power line.

In the most recent case.(some time in the last year) it was a light shining on an insulator.

Well...the other case was too, but in that case the noise was random, but only at night. It turned out to be the headlights from cars coming either around a curve, or over a hill that were shining on the insulator.

With a hairline crack, just the right moisture and temperature and the things were photo sensitive enough to at least pass enough current to generate noise when the lights were shown on them.

From: cartercook@aol.com
Message-ID: <20020317021038.21155.00001901@mb-fh.aol.com>
Source record: 43630

I picked up a fairly nice S38E at a flea market this weekend. Tonight, I downloaded the manual and schematic from the BAMA site. The alignment procedure I downloaded specifies "rotate AM/CW ratio control to its full counterclockwise position" and later "(adjust) AM/CW control until a CW note is heard..." My 38E has no AM/CW control adjustment. Never had one as far as I can tell. I can see that the switch that controls the BFO ties onto an IF can with a gimmick capacitor in the well-used Halli fashion but there's no adjustment there.

My question is, how do you adjust the BFO on this rig? At present, the BFO switch has no effect. The BAMA schematic is not clear enough to shed any light on the issue, either.

# 2660. Re: Eimac 3-500Z tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-17 17:49:32 UTC
From: yardleyite@aol.com
Message-ID: <20020317124932.11033.00003056@mb-cu.aol.com>
Source record: 43638

Hello,
I have experience using the RF Parts 3-500ZG with the graphite plate and in my opinion they're as good as Eimac or any other 3-500Z available. The last time I bought one they were $119.95 plus shipping and come with a limited 2 year waarranty. The more expensive amperex tube ($200) requires about 5 to 10 percent more drive for it's rated output power so it's mu isn't as high as the RF Parts Chinese tube.
Hope this helps.
73 de Joe N3IBX

# 2661. FA: Vintage R.L. Drake Logbook

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-17 18:09:45 UTC
From: maritimus49@aol.com
Message-ID: <20020317130945.07719.00001873@mb-cp.aol.com>

I have an R.L. Drake logbook from the 1960s for sale. Excellent condition and never used. Of interest to Drake collectors or Drake station users. Can be found at ebay auction #1338625808. Auction ends this afternoon.

Bruce

# 2662. Collins KWM-1/516F-1/312B-? Station For Sale:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-17 18:33:57 UTC
From: yardleyite@aol.com
Message-ID: <20020317133357.11864.00002673@mb-dh.aol.com>
Source record: 43640

Collins KWM-1 (serial#573) , with the 516F-1 power supply (serial# 105) with the very rare 316B-? noise blanker and bezel/knob for the KWM-1 (serial# 210). The noise blanker/bezel for the KWM-1 is a very scarce item. I have never put power to the radio or supply so the working condition is unknown. The KWM-1 is missing one hinge for the top cover, and the top cover for the final cage.The knobs show evidence of wear and slight pitting. The chassis/case need to be cleaned. The radio IS NOT in surperb condition and may need extensive electrical/cosmetic work. Please be advised of this and bid accordingly.I would not want anyone to be dissapointed. The 516F-1 supply has an octal connector for use on a KWM-2, and you will need the proper connector or some modification to adapt it to the KWM-1 which uses a special Canon plug. I do however have a Canon plug which is close but not quite the exact one needed which will be included with the station if someone can modify it. Please email me and I'll send a jpeg to you if interested in what it looks like. The case for the supply has a few scratches and dings on the front panel. In lieu of the overall rarity of the station and it's condition I've set a very fair modest reserve so bid up and enjoy the auction.Here's your chance to get a very restorable KWM-1 at a very modest price. I've never seen a KWM-1 with a factory noise blanker with the accompanying front panel bezel for it (in place of the dimmer control) though there may be others out there.
On ebay: item # 1340079285

In very good condition complete with manual's.
Best offer over $1500.

# 2670. Halli S38E BFO control

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-17 23:55:00 UTC
From: cartercook@aol.com
Message-ID: <20020317185500.12278.00001943@mb-ci.aol.com>
Source record: 43498

Thanks to all of you who responded to my query about adjusting the "BFO" control on an S38E. As I wrote in my original post, my '38E does not have the AM/CW ratio control mentioned in the alignment instructions I downloaded from the BAMA site. It just was not part of the circuit in my version of the S38E Mark I. I couldn't read the schematic from the BAMA site, so I don't know what it could have shown me.

This afternoon, I went down to our local public library and took a look in the Sams set 605 Servicer where I found a schematic without the AM/CW control that appears to be the exact '38E that I have. Now that I've got a clear copy of the schematic, I'll see if I can get the BFO going properly and report back later.

Thanks again for the responses.

Carter Cook

# 2672. Re: Looking for AM to SSB converter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-18 01:08:12 UTC
From: John Bartley <jcb@igs.net>
Message-ID: <3c953e7f_2@corp-news.newsgroups.com>
Source record: 43500

One of the things I've done is to run the output of my signal generator thru' a hand wound coil of about 75 turns of #18 copper wire on a 2" form and set that either inside the am radio or on top of it if it has a wooden case, and then use just enough rf gain to beat the IF freq of the recvr. It's a long way from either perfect or long term but it works.

# 2673. FA: McKay Dymek AM7 TUNER - AM / Long Wave Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-18 01:39:54 UTC
From: Daniel Simpson <dzan@qwest.net>
Message-ID: <170320021939545712%dzan@qwest.net>
Source record: 43501

FA: McKay Dymek AM7 TUNER - AM / Long Wave Tuner.

A AM7 tuner is basically a AM5 with the addition of the Long Wave Band. Used in Europe. That you can receive along the east and west coast of the US. (See Information Below)

Long Wave Information:
"155 to 281 kHz: This is another AM broadcasting band in Europe and parts of Asia. In Europe, there are numerous high powered (1,000,000 watts or more) stations here. These stations are capable of covering an entire European nation like France or Germany with reliable signals around the clock. Although ionospheric propagation is not good at these frequencies, the high powers used means that many of these broadcasters can be heard along the Atlantic seaboard during the fall and winter. Best reception is usually from local sunset to about 0600 UTC. A few long Wave stations in Asiatic Russia can be heard on the Pacific Coast beginning an hour or so before local sunrise."

A Detroit Michigan user said:
"I have an AM-7 and a DA-7. They make a nice pair together. Unfortunately, there's not too much long Wave possible except on a few winter nights when I can pick up some of the powerhouses from Europe on the AM-7. I have heard Morocco, France, and BBC on longwave here in Detroit. In fact, this winter, I got them pretty regularly"

SPECIFICATIONS:
* Two Band High Fidelity Solid State Tuner
* Frequency Range: 540-1605 kHz. Standard AM broadcast band,150-300 kHz Long Wave
* Sensitivity: 6.0 ,uV for 10 dB signal to noise ratio on Long Wave Band. 3.0 uV for 10 dB signal to noise ratio on Standard AM broadcast band.
* AGC Characteristic: Less than 6 dB output variation for an input level change of 10,uV to 10 mV.
* Bandwidth: -3 dB RF Narrow - 6 kHz; Wide - 15 kHz
* I.F. Rejection: 45 dB
* Audio Frequency Response: -3 dB @ 15 Hz, 7500 Hz
* Audio Whistle Filter: 9 kHz
* Distortion: 1 kHz @ 30% modulation: 0.5% 1 kHz @ 50% modulation - 1.0%, 1 kHz @ 80% modulation - 1.5% (1 mv @ 1 MHz input, wide & distant mode).
* Audio Output: Standard: 1V RMS- 5K output.
* Shipping weight: 12 lbs. (5.5 Kg.)
* Dimensions: 17-1/2" x 10" x 3-1/2" (43cm x 25cm x 9cm)

Features

The McKay Dymek AM 7 TUNER is an all solid state high fidelity AM/Long Wave tuner combining extremely low distortion with excellent sensitivity, selectivity, and a wide audio range. The AM 7 is compatible with professional studio equipment as well as high fidelity "home" sound systems. The low profile black and teak cabinetry makes the AM 7 an attractive addition to any system or decor.

Broadcasters all over the country report excellent results using Dymek Equipment as low cost monitors. As one station executive wrote, after using the Dymek as the standard, "our signal was as close to 'FM on the AM band' as we could get".

reception from local or distant stations is assured by a choice of narrow or wide bandwidth selections at the front panel. To prevent an overload of the "frontend" that may be caused by strong local stations, an attenuator in the antenna circuit has been included. An illuminated, easy-to-read tuning meter aids in ease of tuning and is standard equipment on all Dymek tuners.

Remarkable selectivity is achieved with two eleven element ceramic filters. A whistle filter eliminates most bothersome noise common to AM listening. Distortion is low and sensitivity helps pull in those distant stations; lets you take advantage of AM's natural long range capabilities - hear stations which were previously unlistenable. Wide and narrow bandwidth selectors assure optimum local and distant reception. Illuminated tuning meter.

The Dymek outreach for perfection in AM reception has produced the Am 7. Unlike conventional AM tuners, the AM 7 allows full and accurate reproduction of transmitted program material. For the first time, AM reception is not limited by the receiving equipment The complete transmitted fidelity may now be fully enjoyed and appreciated.

McKay Dymek is the leading producer of AM high fidelity receiving equipment. Authoritative hi fi magazines agree that the quality of AM reception provided by Dymek equipment is truly excellent. This fact is further established by the acceptance of our products by scores of AM broadcasting stations throughout the United States. Many stations use more than one Dymek tuner to monitor and insure their transmitted quality.

For many years very high quality AM transmitters have been operating, but due to the mediocre performance of available AM receiving equipment, most high fidelity experts believed AM reception to be of inherently poor quality.

It is truly a difficult challenge to design and manufacture a tuner capable of high quality AM reception. McKay Dymek engineers accepted this challenge and, after expending great effort, have succeeded in the design of the AM 7.

The McKay Dymek AM 7 tuner is a precision, solid state AM instrument of the highest quality.

Innovations have been engineered to provide:

Very low distortion even at high modulation levels using a unique hot carrier biased diode detector.

Extremely wide frequency response through the use of expensive ceramic filters.

High sensitivity for reception of weak, distant stations.

Once you have listened to AM radio on the AM 7, surely you will agree with our many satisfied customers: the AM 7 is a truly superior addition to any high fidelity system.

RIF SECTION Dual antenna connectors are provided on the rear panel. An RCA type connector is provided for coaxial cable antenna systems. There is also a set of terminals for direct connection to a longwire antenna and external grounding.

A Dymek AM 7 tuner represents the very best in AM/Long Wave listening. Try it!

Note:This unit needs an external antenna to work I used a terk AM antenna with this unit and it worked well. I am also putting this antenna up for sale. Check for it on ebay. and will need a Long Wave Antenna to receive Long Wave. Like a Mckay Dymek DA7 Antenna or a QUANTUM QX PRO LOOP.

This unit has some minor scratches on the top also a scratch on dial under czech USSR (could be fixed with black paint or marker from the inside) and missing ground plug (see pictures). Otherwise it is in Great Shape!

I accept Paypal, Billpoint & Money Orders. $12.00 for shipping-Continental US only. Insurance optional at buyers expense. Winner to pay within 7 Days of auction close. Email me with questions.

Thank You and Good Luck!!

# 2674. FA: Terk Advantage AM Antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-18 02:01:52 UTC
From: Daniel Simpson <dzan@qwest.net>
Message-ID: <1703200220015264 51%dzan@qwest.net>
Source record: 43502
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

FA: Terk Advantage AM Antenna

Finally an AM antenna that is truly beautiful!

When appearance is an issue you finally have a great choice! It has most of the power of a Select-A-Tenna plus it is a handsome addition to any decor. It comes with wires like the Select-A-Tenna Hardwire model for direct connection to your stereo or can be used like the regular model Select-A-Tenna. It certainly blows away any of the smaller antennas supplied with a stereo. Size: 9.5ï¿½ high.

The Terk AM Advantage AM antenna dramatically improves the AM reception from any receiver, tuner or portable radio. Its unique passive wireless technology eliminates the need for connectors, batteries and power cords ï¿½ simply place the AM Advantage near the receiver or radio.

The AM Advantage combines wireless convenience with advanced tuning technologies such as Terk's exclusive Pin-Dot Pre-Tuningï¿½ that zeroes in on even hard-to-get stations by tuning the antenna to the station's frequency.

Features:

* Pin-Dot Pre-Tuning dial adjusts antenna to a specific frequency for best reception of individual stations
* Compact design allows easy placement
* Non-skid base keeps antenna in place during adjustment
* Reception pattern: Omindirectional
* Dimensions: 9.5"H x 9.5" W x 2.5"D
* Wire For Direct connection

AM Advantage Q&A
Does this antenna need power for it to work? Also, how can I connect it to my radio?
The AM Advantage is designed for "wireless operation"--that is, it does not need AC or battery power and will actually provide signal to your radio or receiver without having to be connected with wires. However, if your radio or receiver has connections for an external AM antenna, we supply a wire with the AM Advantage to connect the antenna to the input, should you choose to do so. The solid black wire connects to the terminal on the radio or receiver labled "AM in," while the wire with the white stripe on it connects to the terminal labeled "ground."

Can I extend the wire on my AM Advantage to place it on a windowsill or somewhere away from my receiver?

You can extend the wire with by splicing it with insulated doorbell wire, which is available at any do-it-yourself electronics or hardware store. However, we do not suggest doing this, because the length of the wire is calibrated to correspond with the tuning dial on the AM Advantage. When you extend the wire on the AM Advantage, you also change the resistance of the antenna, which will cause the station indications on the dial to be inorrect.

Why does my antenna work better when I touch it?
When you touch the antenna with your feet on the ground, your body is actually acting as a giant antenna and affecting your AM Advantage's reception. You have to let go of the antenna and move away from it to determine its reception performance.

Can I make the wires on my antenna longer?
No. When you make an AM antenna lead longer, you make it more susceptible to interference. The longer the lead, the more interference you are likely to hear. Also, lengthening the cable will change the impedance of the antenna and degrade reception performance.

Why does the antenna work better when my radio and antenna are next to a window?
Many building materials can affect AM and FM signal reception. Metal, brick and stone between the radio station and the antenna will decrease the strength of the signal. to the antenna. However, glass does not block radio signals, and locating your antenna next to a window allows the antenna to receive a cleaner, stronger signal.

This unit is in good to great shape. It shows some scuffs in the rubber base. and that is all.

I accept Paypal, Billpoint & Money Orders. $9.00 for shipping-Continental US only. Insurance optional at buyers expense. Winner to pay within 7 Days of auctions close. Email me with questions.

Thank You and Good Luck!!

I recently obtained (15) really nice GE 6LF6. These tubes may
not be brand new although they test new. I'm told they saw a
few hours service as spares in a Counterpoint audio amp. The
tubes look great, they test brand new, and they are not real easy
to find. Here's a chance to get a real bargain - these are only
$36.50 ea.

Shipping is free to USA addresses with a >$75.00 order.
Drop a note if you can use these.

Many thanks.

Source record: 43511

After a short session on the bench, I got the S38E Mark I receiving SSB well.

The Sams information I found at the library recommended that the gimmick capacitor portion of the circuit be changed. As the schematic showed and the text described, I removed the gimmick capacitor from the plate of the 12BA6 IF amp and relocated that gimmick to the diode pins of the 12AV6 detector. I made a second gimmick for pin one, the grid lead of the 12BA6. there's now plenty of injection.

Several years ago, my older son put together a Ramsey "SW Radio Kit"
for which I designed and built a little one-transistor outboard BFO
(it worked like a charm, if I do have to say so myself!-).

I submitted the design to a couple of the "do it yourself" electronics-
oriented magazines, but it was never published. I still have it (in a
pure text/ASCII file--with "ASCII schematics", even, which may be why no
one published it!-); if anyone asks, I'll email a copy.

Maybe one of the tubes is weak. Look at BFO first. I've had 'em fade out
when in standby and take some secs to re-heat a weakened cathode.
Jack

Well, there was Dipolonius, the Roman senator. And there was Petroleum Blownaparte, the former King of France who had a very bad experience with a Cantenna dummy load.

Even the youngest of schoolchildren has been taught that Vikings appeared on the American continent as early as the eighth century AD, although of course AM modulation was okay back then.

And even Tennessee Williams was an amateur radio operator. His long-lost play "Morning Becomes Electric" about an all-night DXing session, is another fine example of this hobby influencing the arts.

It is in the 2 to 30MHz range. I had some sort of test unit for this rig
years ago, and sold it at one of the local hamfests. The folks at the
Collins Service Center were clearing it out, along with a bunch of HF80
"boneyard specials".
As far as performance, I think that it was pretty similar to the HF380.
Good luck on your new unit!

Hi,

I'm renovating a Swan 350 that has had the front panel hacked about and I'd like to find a replacement panel. Any 350 that has the "Dial Set" controlled installed and with a serial number beginning with C85 or lower will do the job. I'm also on the look out for two of the PA and grid tuning knobs too.

Please contact by direct e-mail.

TIA,

--

Andy Griffith the actor is NOT this person. If any of the
callsign servers still gave the birth date, this would be
painfully obvious. The ages are off by at least 20 years.
The actor would had to have been 17 years old when he was
doing the Mayberry stint. He wasn't.

> doing the Mayberry stint. He wasn't.

I can't think of another name at the moment, but I'm sure this sort
of mistaken identity has come up before. Someone sees a famous
name in the callbook, and assumes it's the famous person, when
in reality, it's just someone with the same name. When this
sort of thread has come up before, I'm sure there have been
debates on other names about whether the famous really were hams
or not.

It's not totally unexpected. People want the recognition of
the hobby that a famous name would seem to provide, so if
they see a famous name, then they accept it as the famous
person without any further consideration.

I've got three of these in my collection. I removed all three from
their original Navy packaging. One had the plastic cover and the
other two did not. So, it would appear that some were supplied
without the cover. Maybe they decided there would be no flames flying
off of the terminals!

# 2740. FS: Hammarlund keyers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-20 20:13:40 UTC
From: k9sqg@aol.com
Message-ID: <20020320151340.04709.00002276@mb-fk.aol.com>
Source record: 43468

Have two Hammarlund keyers I'd like to sell as a pair. One has a problem. It keys fine but after the first dot or dash the sidetone stays on. If you turn the keyer off, the tone is off when you turn it back on. With discrete components, and the other keyer that works fine, it should be easy to fault isolate if one has a little free time, which I don't, hi. I can send a jpeg image if you're interested.

Thanks for reading the post.

73s,

Evan

# 2743. KWM-2A,516F-2

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-20 21:43:10 UTC
From: Allan <ae2j@bellatlantic.net>
Message-ID: <On7m8.27178$e33.1454@nwrddc01.gnilink.net>
Source record: 43471

FS: KWM2-A and 516F-2 $750 plus packing and shipping.

I acquired these units last year with the idea of rehabilitating them. The project no longer seems attractive to me as I don't really have the workshop, tools or junkbox that I need.

The units are now functioning electronically. Full power output on all bands after servicing at LandAir. I have used it on the air with satisfactory results and reports. Cosmetic and mechanical work remain to be done. The dial mechanism (it was inoperative) binds at the 93 kHz position,(needs a new dial plate) altho the PTO tracks accurately. Upper and Lower sidebands function (I replaced the lsb xtal). Cosmetically (based on CCA standards) it is good to fair, with some minor discoloration on the front panel, and some erosion of the paint markings on the P.A. Tuning control. The chassis male power socket octal key was broken and has a temporary 'fix', it should be replaced.

The power supply needed to have some of the electrolytics replaced. I replaced the fuse holder as well. The cases is in need of a paint job and the feet are missing.

The KWM2-A is wing emblem, but the serial number was removed. The power supply case is round emblem. I don't know the provenance of these units , they do have 3 extra xtals installed for 4.0,4.4 and 7.8 MHz.

I am selling these for what I have invested in them. I will include a photocopy of the complete Collins Instruction Manual.

The system works, and I am willing to demonstrate on the air.

Allan, AE2J ae2j@arrl.net

As a resident of Canada's most easterly province thank you for the mention of the oldest yet discovered Viking settlement in North America. It is/was at Lanse Aux Meadows on the tip of the Great Northern Peninsula of the island portion of this Canadian province, of Newfoundland and Labrador. Their leader was Leif Erikson sp? (Eric the Red?) Lanse Aux M ..... actually means "Bay of Jellyfishes", from the Spanish/Portuguese 'Meduse' for jellyfish which are still abundant today.

And the Portuguese and Spanish etc. were over here too! Including Basque whaling stations at Red Bay Labrador well before the mid 1400s! But that's another bit of history.

I guess Leif's call sign would have been V1KNG! Strictly manual operation though.

International recognition of the site excavations and discoveries have confirmed that 'Europeans', Norse Vikings from Greenland settled, lived there, forged metal and so on, for at least several years just before 900 AD. There is some indication too that from there they explored south along the North American coast, past what is now Nova Scotia Canada, possibly as far south as Boston, New England etc. In the Viking Sagas for example they describe grapes which do not grow, naturally, this far north; even if the climate was warmer back then.

And oh yes, they got into squabbles with the existing residents, whom they called 'Skraelings'; I guess today we would use the term 'First Nations People' or perhaps 'Original or Aboriginal Inhabitants' who had been here we gather for thousands of years!

I would imagine that the Vikings were using 'Muscle Power' at the rate of about half a kilowatt per oar per hour; plus wind power. BTW the Viking voyages were commemorated some years ago by modern day adventurers who used satellite navigation, amateur radio and more comfortable living

conditions!

There is also some historical indication that the Irish monk, St. Brendan journeyed to North America in an open leather boat made from sewn cattle skins, tallow etc. around the year 840 AD, before the Vikings! That was also re-enacted some years ago. Thus proving that those voyages were possible even if dangerous with the technology available back then. No coastguard watch on 2182 kilocycles or Transatlantic jets overhead monitoring 121.5 megacycles, daily skeds on 20 metres etc. back then, eh?

So the recent allegation that Chinese adventurers had journeyed around the world including visiting the Caribbean area, in the early 1400s, while maybe interesting didn't elicit much excitement here in view of the above history!

Terry.

A few miles from where, more recently, in December 1901, Marconi received the first transatlantic wireless telegraph signal at St. John's Newfoundland from Cornwall England.

## 2753. Marconi S.M.R.III

> Thanks Frank WF1U

I read all the other posts and it seems to me, unless I'm reading this wrong, the you are asking for AM to SSB, not SSB to AM. Everyone else seems to be describing a BFO. What I thing you are looking for is a SSB modulator.

I don't know of anything new that you can strap on to a old AM boat anchor to convert it to SSB, but there are still some old boat anchor converters out there. Heath made a SB-10 SSB Adapter that was intended for the DX-100. I have one connected to a DX-40 but the DX-40 doesn't have the necessary bias voltages and thus requires a outboard power supply. Connecting one of these to a boat anchor usually requires that you break the transmitter chain at the Driver stage, just in front of the Final. The adapter is inserted here and the Driver/Final bias voltages are adjusted to run Class AB2, as opposed to Class C in the DX-40. Most of the AM modulation chain would also be bypassed or disabled because you would only need the low lever audio stages.

There may be other SSB adapters out there, but I'm not familiar with them.

# 2761. TS-940S Info?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-21 21:03:03 UTC
From: David Cook <nospam.davepc2@oz.net>
Message-ID: <bUrm8.84628$Yv2.29608@rwcrnsc54>
Source record: 43489
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a buddy who has a TS-940S and hasn't been able to use it for about 3 years. He claims to have the user's manual, but it's buried under years of debris in his shack. I'm wondering if someone out there might be able to give me some advice.

The first symptom was the power wouldn't come on when the Power switch was pushed. I tinkered around and found that by clicking the Timer switch right next to it, the power switch then worked. What is the purpose of the Timer switch, and is this normal behavior?

The second symptom is that, once power is on, it doesn't receive or transmit. There's a roar of white noise from the receiver, but nothing from the ether. I checked the band with an HW-16 sitting next to it (yeah, it's a real museum), hear signals, tune the TS-940 to the same frequency, but hear nothing. By the same token, there's not a peep of power when I try to tune it for transmit. I'm wondering if it might be something like a blown T/R relay, but without the manual/schematics I can't go beyond a guess. Is this a problem someone out there may have experienced before?

Thanks in advance for any info and 73 to all,

-- Dave, WA0TTN in Seattle

From: James <jamesf@xxxnec.com.au>
Message-ID: <1016752178.538531@busy.neca.nec.com.au>
Source record: 43492

Hello,

I'm the lucky owner of an old oscilloscope made by Magneti Marelli, model number ASM703B. Its made in Italy, big (19" x 9.5" x 20") and heavy, and is rack mountable. Its basically original and contains approx 21 valves. It works OK and has a bandwidth of a whopping 500kHz.

Can anyone supply some information on this CRO, maybe even a schematic? Is it collectable? It has been superceded by a much later model HP cro (only 25 years old) and I'm trying to figure out if it is worth keeping.

I've tried searching the net, but found nothing.

Thanks,
James.

Howdy Ralph.....I restored one of those a few years back (used it for general listening and later sold it to a fellow in Quebec). The K4XL BAMA has a schematic for it (from myself). Link is ftp://bama.sbc.edu/downloads/marconi/smr3/

My SMR-3 had a badly deteriorated sliderule dial and perspex type window and I have available, measured and redrawn, a scale file so that you can print off your own reproduction (I double laminated mine and installed it better than ever). There's some interesting interactions associated with the 2 toggle switches lablelled MVC and AVC as I recall...you'll get the hang of it though. I also made a slight mod to add an audio output transformer to the receiver so as to allow speaker operation. Hope you get as much enjoyment out of yours as I did from mine (a lot).

I would like to operate my old SB-102 but I have not turned in on in several years because I have no idea where I would get replacement tubes when the tubes go out -- as they will eventually.

Where to get replacement tubes?

I guess the idea is to buy a couple of replacement sets and keep them around against the day when there will be no more tubes anywhere at any price.

JP,

You are going to have to check with used and NOS tube dealers. I don't believe that 6JS6s are made anymore. You will have to pay up for them, too. Probably between $25 and $50 each. If the tubes are different brands, you may have some trouble neutralizing them. If the tubes are good, you should see around 85 watts on tune up, give or take a few, and 120 to 150 PEP on SSB.

There are still zillions of tubes available, most costing only a few bucks a pop. The page at http://antiqueradio.org/parts.htm lists some well known parts suppliers.

I would not waste money buying spare tubes for a rainy day. Tubes are among the more reliable parts of a radio. Bad capacitors and dirty/corroded controls are much more likely to cause trouble. The article at http://antiqueradio.org/recap.htm explains about replacing capacitors.

When I bought my first Hallicrafters SX-28 a few years ago, the seller threw in a box of more than 50 spare tubes. He had been using the rig since the late 1960s and had inherited the tube stash from the original owner. I don't think he had dipped into the box at all. I replaced a couple of tubes that tested weak on my tester, but I bet the radio would perform just as well if I put the weak ones back in.

Phil

Some manuals really make it seem complicated. Basically you adjust the neutralizing cap so that the current dip coincides with max out. You don't need to lay on the key to do this. Repeat tweak and retune till you hit the right spot. Dummy load required :-) If it takes more than a few minutes, something else is wrong.

You will need to consult the manual on how to properly neutralize the finals. Its been more than 20 years since I've done it and I can't remember that far back. Neutralizing neutralizes the interelectrode capacitance in the tubes thereby minimizing the RF feedback from the plate to the grid. This feedback will cause the tube to self oscillate if not neutralized. My recollection is that you neutralize by minimizing the plate current while maximizing the screen and control grid current. But refer back to my first statement.

If your bank says "no," it means NO.
Send it back to him and ask for a USPS money order.
If he won't do that, tell him "so sorry."
After all, you did ask him nicely the first time.

Personally, I don't do money orders at all.
They're a pain in the neck. If the seller
won't take a personal check or PayPal,
I just move on.

I work with a check cashing company and we don't take money orders at all. If the person keeps the duplicate copy of the money order, he can always go back and have it revoked. Since he didn't even send you the type of money order you asked for, I'd send it back and ask for a bank cashier's check.

OK, the great thing about PO Money orders is that if you receive one, you can cash it right at the Post Office counter, as long as they know you and have ID. No need to run it through your bank.

The Western Union money orders, and all other money orders are treated as checks, since (with a waiting period to clear) your bank doesn't know if they're any good or not.
A few years back, a MOney Order Company went out of business, leaving a lot of low-income people out on the street (they paid their rent and utility bills with these things, and they bounced). Our government DID NOTHING about this, because legally speaking a money order EVEN FROM A BANK is a "draft", which is another word for "check", which is nothing but a promise to pay when it's presented at the drawing bank.

My local bank even refused to credit my account for five days on MOney Orders from other banks! And once, when I sold stock, I got a check drawn on Chase Bank, which they refused to cash at a Chase branch. I had to deposit it and wait 3 days!

Part of this is government (IRS) regulations designed to capture transactions that might be taxable, like the rule they are required to report deposits of over $10K a month to the IRS, unless these are normal for the business or individual.

Postal money orders are best, as they become currency at your local PO, and at less than a buck, they're a bargain....Chase charges $3 or $4 for a money order....err, draft.

If you need cash rapidly, the POMO is best, and if your buyer wants to pay an extra $13 he can go to a Western Union (WU) money transfer place (Waldbaum's groceries do this at the Service Desks) and send and receive $.
But there are restrictions--sometimes they give YOU a check!

Bob...

I don't believe your statement is true for Postal MO's. I sent one and it was lost. The PO said my ONLY recourse was to wait two months. If by that time it had not been cashed, they would refund my money. (I did and they did.) The PO here in New Mexico specifically told me there is no way to "stop payment" on a Postal MO. Other institutions issuing them might handle theirs differently.

In this specific case the resolution seems obvious... email the guy and give him a choice... wait for it to clear or resend the requested form of payment. He's probably going to be delayed about the same amount of time either way.

What tubes are in there? In general, receiver tubes are pretty cheap and easy to get unless they are popular with the guitar amp crowd, TV and radio tubes (except for sweep tubes) are a glut on the market, most standard transmitter tubes are expensive but available and in current production, guitar amp and audio tubes are very expensive and sweep tubes are impossible to get at any price.

>I guess the idea is to buy a couple of replacement sets and keep them around
>against the day when there will be no more tubes anywhere at any price.

Well, try Ned at Triode Electronics in Chicago, or Antique Electronics Supply in Arizona. Both have decent prices and good selection.

12BY7 is a video pentode. It's available, but they are probably fine.
The 6SJ6 is a sweep tube. Good luck finding any, but try the usual
tube dealers (ESRC, Triode Electronics, Antique Electronics Supply).

>After replacing them what will be the output wattage of this unit?

About half of what it's rated if you want those finals to last.

In my business, buying or selling from news groups or e-bay, I stick to Postal MO only. IF dealing with a large company then I do business with checks. But they usually have already done business with me to allow for quick shipment and no question.

Being also an Examiner for FCC Amateur and Commercial exams, I had a gentleman from a neighboring state present me with a Money Order from a Convenience Store at an exam session. I had trouble getting it cashed. So, before I processed his paperwork, I called him and told him to get me a USPS MO in the mail ASAP. I returned the "bad" MO to him, to deal with. So that too, kind of taught me to not accept out of state MOs.

Postal Money Orders get immediate shipment in most cases from me. Checks, while I hesitate to take them, will wait until they are cleared. MOST customers comply with my request for a Postal MO. But on occasion I have had a check sent to me instead (not by my choice).

COD isn't in my vocabulary, unless a company I'm dealing with uses that as an only option for ME (as a customer) to use, and I have run into at least one occasion of that.

Just my two cents.....

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

The timer button is a common operating error with the TS940SAT. (A friend of mine missed an
entire contest weekend because of it once).
As for the lack of receive sensitivity, here are a few things to try:
1) Check the ATT is set to 0
2) Check the RF is completely CCW.
3) Check the SSB Slop TUNE is : outer knob CCW, inner knob CW.
4) Check that the NAR button is deselected. (CW filter may have been removed)
5) (rear of radio) Check the RX ANT SWITCH (I can't remember which way it goes, just switch it and see)
good luck

Your just looking for some of the standard communications knobs often
found at radio shack. The silver "spinner knobs" can be purchased from MFJ
as they use the same type on current equipment.

cheers
skipp

As you say, it should be quick and easy.
I had a 101B and although I used what ever was handy for tubes, I never had
to reneutralize the finals.

That rig damn near electrocuted me though.

Watch out for the AC power connector on the back of the chassis.
Mine had an extra bit of solder on the one lug (from the factory).
Even though the rig was grounded, there was enough resistance in the ground
that the coax shield out at the 1/4 wave vertical was hot. That braid also
tied directly to an 8' ground rod at the base of the vertical.

Several of the radials (bare #12 copper) had come loose during the winter,
or spring. I picked one up and pulled it tight and bent downt to stick the
end back into the ground. As soon as my knees touched the wet ground that
wire grabbed me but good. I rolled backward and as soon as my knees broke
contact, I threw that ground wire.

I took my Simpson, stuck one lead in the ground at the ground rod and the
other into the ground as far out as the length of the leads would allow. I
measured 90 volts AC.

I wouldn't take a personal check when using e-bay on a bet.
Too many complaints about pay-pal...USPS money orders work fine.

Source record: 43428

VERY clean HT-44. I do not have the P.S. so cannot check it out, but I have inspected the underside of the chassis (which appears as new) and can see no signs of repair or mods. Front panel is very good ( 2 short scratches in the white trim), all original knobs. The cabinet has rub marks, but the overall texture finish is quite nice and could be top coated with original HT-44 paint and retain the texture finish. No manual.

$175 + S/H from western NC

From: la8ak.xnd@online.no
Message-ID: <3c9bc8a3.56901085@news.online.no>
Source record: 43437

Bought a wreck of Philips H2L/7 receiver - three tube sockets were
removed. Have the handbook, but miss information for how the RF tubes
are mounted, a photo would be great

Could somebody pse help me?

Gerhard B. Salzmann DL2IE's book on "Commercial German communication
receivers 1914-1945 (German language) - issue 1993 and 2000/2001"
mention only one version, but the handbook indicates that it is a
second conversion using H410D, 2x RE084k for the first 3 tubes
however mine seem to be the first version

I was wrong. He's not a freebander, just a CB outlaw.

---
Thursday, January 24, 2002 11:07 PM

I hooked up my cousins set up and am having a bad problem.
We hooked up the radio which is a old realistic 40 channel a boomer
125 amp and a 102 inch whip on a 1984 chevy van.

Got it all hooked up and didnt like the swr but couldnt seem to get
swr below 2.0. The radio worked fine without the amp on but as soon as
the amp is turned on and radio keyed nothing would happen. I could
hear the relay in amp click but no power output.

This same set up use to be hooked up in his 1969 Ford pickup without
any problems but the swr was like 1.4.

Anyway after all this I just took the boomer 125 out of his van and
hooked it up to a battery connected to the base station to see if it
would work in the garage. Well everything works fine. When in the
garage it deadkeys good and swings forward.

Then I took my palomar 250 out of the garage and hooked it up in van
just to see what would happen and it worked fine. So what is going on
here?
One amp will work good but the other wont key up at all.

Just to let you know there is 10 gauge wire coming from the battery to
amp which is about 6 or 7 feet long. From radio to amp is a 2 foot
jumper then from amp to antenna is a 20 foot piece of coax.

The antenna is mounted on the top center of van. It has the mount
where you have to drill thru the roof.

Well hope someone can help. Thanks in advance,
John Phelps

Source record: 43344

>Can you say anything about the relationship
>between a "check" and a "cashier's check"?

well, I;m not a banker, but this is what I understand.

A Cashier's check is issued by the bank with cleared funds withdrawn from your account. I believe it's signed by an officer and is virtually bounce proof. My bank will process these in some expedited manner so the funds clear the next biz day after deposit.

A "Teller's Check" is almost as good (I don't know the distinction), but it seems to take longer to clear.

An interesting point about CERTIFIED CHECKS. Payment can be stopped on them by the issuer by placing 100% matching funds in a special account and then order a stop pay.
So they're not perfect.

So what is? Wire transfers for one. Whenever I need a travel allowance for business they issue a SAMEDAY INSTANT FUNDS TRANSFER to my account, and it shows up in 10 minutes or less (NJ to NY).
But, I had to be pre-registered (that is, a letter was on file at the sending bank).

If a wire goes to a person not previously dealt with, it seems to take overnight. Costs are high: $10 to send, and for me $12.50 to receive. They add my fee into the payment so I net out OK.

Of all the methods, I'm leaning to the POMO
(Post Office Money Order) sent by Priority Mail ($3.50 and gets it there in 2 days). The recipient cashes it at the PO. If you figure that some banks charge $4.00 for an MO which has to clear, plus 34 cents for a stamp(soon 37), your cost is $4.34.

If you buy a POMO for 85 cents, plus $3.40 for priority mail, you're at $4.25, which is 91 cents more, but you have an irreversible rapid transaction in two or three days.

Oh, and PayPal and Bid Pay?
Well, PayPal's contract allows them to withdraw money from your bank account at ANY time...even a year later...if the buyer says you heated him. There are lawsuits in progress over this, according to several highly critical websites.

You sell a radio for $300, you get the money put into your checking account; six months later the buyer says you cheated him. They take the $300 from your account without notice. You could bounce checks incurring even more fees. Your ONLY protection with PayPal? Never withdraw the funds at all!

This is a risk (I've taken it), but you should read the fine print.
And remember PayPal is not a bank...nobody regulates its quasi-banking
operations.

POMO wins!

news:a7ggle$nvg@unix1.cc.ksu.edu...

> Can you say anything about the relationship
> between a "check" and a "cashier's check"?

A bank issues you a "cashier's" or "bank" check AFTER the bank has
transfered your funds into theirs. When you present a cashier's check,
the recepient knows you had to ante up the money before the check was
issued.

With a personal check, the recepient has no idea if you have funds to cover
it, thus the typical wait period until it clears.

I don't use "cashier's" checks very often, but as I recall my credit union
charges something like 50 cents for them.

On a related note, my credit union issues Travelers money orders -- I've
had no problems with them for ebay transactions. However, if the seller
wants a postal MO that's fine by me also.

suppose "Old Receivers" means tube type.
Often it is question about adjustments of levels, replacement of
resistors, or just a plug-in which goes into the BFO tube socket

just too many modifications are bad - made without any understanding
of what is optimum for the kind of equipment they are used with

I've designed such unit for AR-88 and similar receivers

Message-ID: <qr2n8.100283$702.21831@sccrnsc02>
Source record: 43369

Running three 6146 for RF should provide about 50 watts of carrier output depending on the efficiency of the rig. The normal tune up for AM is specified at 200 watts plate input.

I run a TS-830 with two 6146 and get about 35 watts of carrier with it on AM.

Someone actually operating a Valiant can probably provide confirmation of the output power...

Source record: 43378

SAVE your time in troubleshooting!

The notorious problem with Valiants lies in the nichrome wire they use for meter shunts in the final
and plate modulator circuits - these are frequently FAR out of tolerance - as can be easily displayed by connecting a decent external multi-meter in series with the respective plate leads and
directly monitoring final an modulator plate current, separately from the internal meter in the
Valiant. Best place to measure final plate current, is to place the external meter in series with
the plate lead down at the BOTTOM of the plate RF choke in order to keep RF outta the external
meter. You will undoubtedly find that the internal meter is indicating a good 100 milliamps MORE
than is actually flowing in the circuit - causing you to THINK you are loaded to maximum, when you
really aren't... The "fix" is to carefully trim the wire shunts for greater accuracy, or substitute
better ones... Be sure to do the sams in the modulator - they have the SAME problem, and might cause
incorrect modulator operation as well due to incorrect gain settings when relying upon the (usually)
faulty internal meter circuit...

This is a nifty-looking old receiver with that classic space age blue
finish.
Front panel looks very nice, but some of the knobs look crusty and
need
cleaning. Appears to be all original with no modifications.
Receiver is non working but it is all there, and will clean up nicely.
Picture available on request.
Will sell for $125.00 plus shipping

Knight TR-106 6 meter AM transceiver with V-17 VFO
Excellent looking Allied-Knight 6m AM rig with the matching VFO.
Comes with the microphone and has built-in speaker. Hook up 120V AC
and an antenna and you are on the air. Needs one cable. Otherwise
complete and has very nice appearance. Picture available on request.
Will sell for $125.00 plus shipping

Hammarlund Speaker. I believe this one matches the HQ-110 and other
similar radios. Extra nice condition. Picture available on request.
Will sell for $50.00

Atlas 210 HF transceiver. Includes DC power cable. Needs work.
Cosmetically very good. A couple of extra side holes where a genius
mobile-mounted it. Picture available on request.
Will sell for $115.00 plus shipping

R-268/ARN-5B Command series rare VHF Receiver - Black case, similar
to BC- 733F, but marked for 24V DC and no dynamotor. It's all there
including the shock mounts and special bayonet connectors. Looks to be
in very good condition. Unmodified. Picture available on request.
Will sell for $30.00

Command Set transmitters:

BC-459A complete - have two available. One is black crinkle paint
finish. The other is the silver case. Both are made by Western
Electric and are complete, unmodified, missing one very small cover on
top. Will sell for $40.00 each plus shipping

Boonton Crystal Calibrator Model 111
Excellent condition
Will sell for $25.00

Boonton Crystal Calibrator Model 111-B
Excellent condition
Will sell for $25.00

Shipping is additional on all items.

Hi Skipp,

We don't have Radio Shack in England, it used to be the Tandy chain of
electronics stores but nowadays they just sell cellphones! I'll take a
look at the Web page, thanks.

Amateur Radio Newsline™ Report 1284 - March 22 2002

Amateur Radio Newsline report number 1284 with a release date of
Friday, March 22nd, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio and the FCC join forced to find a wayward transmitter jamming a fire department radio. This story is first on Amateur Radio Newsline report number 1284 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS ASSIST IN TRACKING DOWN WAYWARD TRANSMITTER

Ham radio operators teamed up with the FCC to track down a wayward transmitter. One that was making communications very difficult for the Fallbrook California fire department. It took place the weekend of March 10th. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the rest of the story:

--

Milt Davies, KD6UBA, is Division Chief of the North County Fire Protection District. He was the first to identify the problem as radio frequency interference.

Davis described the annoying signal as being an unmodulated carrier pock-marked with strange data-like bursts. Sometimes the jamming transmitter was on-the-air all the time. Sometimes it was on and off. And at still other times the signal almost disappeared - transmitting only a few seconds in a 10 or 20 minute span.

Davies recognized the problem as on-channel jamming. He also knew that he needed outside help. That's when the FCC and the local ham radio community were notified.

First to try was the FCC. As you know, the agency has a series of permanent direction finding stations on the West Coast. These can be operated by remote control from Washington, D.C..

The FCC's weekend duty officer attempted to pinpoint the source of the interference using them, but with only partial success. Some of the locations were down for servicing. The result was a single line-of-bearing. This meant that the interfering transmitter could be anywhere along a 45 mile path.

To help home-in on the transmitter's location, members of the Palomar Amateur Radio Club were called out. They were asked to listen to the fire dispatch frequency and give signal strength reports on the unmodulated carrier. These

reports, coupled with the FCC's own line-of-bearing, pointed to the City of Vista, or vicinity.

Now the hunt again became the domain of the FCC. Bill Zears, the District Director in charge of the FCC's San Diego Field Office, arrived with a sophisticated direction finding vehicle. Zears drove to Fallbrook for his first good bearing. That sent him off toward the rugged eastern portion of Vista.

At about the same time, a fire broke out in the Camp Pendleton military complex which borders Fallbrook. The jamming signal was preventing firefighters working the Pendleton fire from communicating directly with their Dispatch Center.

Zears stayed on the job as Sunday afternoon turned into evening. Finally, enough direction finding bearings were available to pinpoint the wayward transmitter to a 30' tower atop a hill in east Vista.

The Vista Fire Department was called. The Battalion Chief on duty offered immediate help. It turns out that a local ham had brought him up-to-speed on the interference case earlier in the day.

Then another ham recalled that the City of Vista once had a transmitter up on the suspect peak. That old VHF transmitter dated back to the days before most communications had moved to the 800 MHz band. He also knew that the old box just happened to be tuned to Fallbrook's current VHF dispatch frequency - because that was Vista Fire's old frequency!

The crew lost no time in getting up the hill and confirming the location of the offending transmitter. Nobody knows why power was still connected. Probably an oversight by some long forgotten radio installer. None the less, it caused the Vista's Fire Department to unintentionally jam Fallbrook, but pulling the power plug made the interference go away.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Thanks to the cooperation of everyone involved and the tenacity of FCC District Director Bill Zears, the situation had a happy ending. (W6VR)

**

OLYMPICS FOLLOW-UP: HANDI-HAM CARRIES OLYMPIC FLAME

The 2002 Winter Olympics may be over, but now comes word that a visually impaired ham radio operator was among those who had the honor of carrying the Olympic Torch.

Kitty Hevener, WB8TDA, and her trusty guide dog SunStar, carried the Olympic Flame on Saturday January 19th. This, as it made its way to Salt Lake City Uath. Kitty’s segment took the flame up to the gates of Fort Point, in the shadow of San Francisco California’s Golden Gate Bridge.

According to the Handi Hams, Kitty Hevener, WB8TDA, is active with that group as well. Handi Hams says that she is a regular volunteer at the annual California Radio Camp held at Camp Joan Mier in Malibu California every March.

You can see photos of WB8TDA carrying the Olympic Torch at www.graystuff.com/gallery/kitty. (HandiHams)

**

ECONOMICS: JAPANS ECONOMIC RECESSION MAY AFFECT RADIO PRICES

The price of ham radio gear and other goods manufactured in Japan may soon change, but its unclear if it will be up or down. This on word that Japan's economy has fallen into the worst recession in at least two decades. The last time the Japanese economy contracted for three quarters straight was in 1993, when it shrank at around 0.1 percent each quarter. Before that, Japan had never seen even two back-to-back quarters of contraction - the usual definition of a recession - since the government began keeping such records in 1980. (ARNewsline(tm) from published news reports and ARNewsline(tm)interviews.)

**

EMERGING TECHNOLOGY: WSJT TAKING ON THE WORLD

Meantime, a new mode of operation seems to be taking Amateur Radio by storm. We have reported on it before: WSJT. And it lets everyone get in on what used to be the esoteric operation called meteor scatter. Q-News Graham Kemp, VK4BB, looks at the way WSJT is taking on the world:

--

WSJT is a digital mode, designed specifically for meteor scatter communications. It stands for Weak Signal communications by Joe Taylor K1JT. Its advantage for is that it sends extremely fast in a standard SSB bandwidth at 147 characters per second or about 1700 words per minute. By virtue of this speed it is possible to send two call signs and a signal report in a tenth of a second meteor ping.

The equipment to make WSJT contacts is fairly modest. A two meter SSB transceiver and a computer -- a Pentium, at least 75 MHz is the main hardware required. Then you need a simple PSK-31 interface box, as described in March 2000 AR magazine and some WSJT software.

An RF power output of 50 is the practical minimum, with 100 watts providing a worthwhile improvement. A major advantage with WSJT is the small antenna system required. A five element Yagi will do as well as a 10 element Yagi.

From Q-News Australia, I'm Graham Kemp, VK4BB for the Amateur Radio Newsline.

--

More information and the necessary software is at the official WSJT website. Its in cyberspace at pulsar.princeton.edu/~joe/K1JT. (Q-News)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the CARES repeater on 146.73 MHz and serving Gulfport Mississippi.

(5 sec pause here)

**

ENFORCEMENT: THAT CHARGE SHOULD NEVER HAVE BEEN FILED

The FCC has told a Midway, Tennessee ham that his complaint about a club repeater has no basis in fact:

--

Hollingsworth: “We dismissed a complaint filed by Jeffrey Bible, K4MFD, of Midway Tenneseee. His complaint was against the Andrew Johnson Radio Club repeater W4WC which is located on an adjacent tower.”

“We found that despite allegations, the W4WC repeater had not lost coordination just because of a move. The move was within the coordinators limits. In fact, the repeaters have been operating for years with no problems.”

--

That was the FCC’s Riley Hollingsworth, K4ZDH who also says that both parties are coordinated, so both will have to work together to solve any interference that might arise. (FCC, RAIN)

**

ENFORCEMENT: FCC REFUSES TO INTERVENE IN ATV REPEATER DISPUTE

The FCC has also declined to intervene in a dispute involving two Mid-West Amateur Television repeaters. One owned by a major radio club and the other by an individual. The main reason. There is no coordination for ATV in the area. The FCC’s Riley Hollingsworth explains:

--

Hollingsworth: We notified Adrian Oaks, KB8GRJ, of Xenia Ohio that we would not get involved in a dispute that he has with the Dayton amateur Radio Association over the operation of an ATV repeater. Dayton’s repeater, W8BI, has started occasionally operating on frequencies registered to Oaks. I emphasize registered nor coordinated. There is no coordination program there for ATV repeaters. But there’s no showing of actual interference.”

“DARA uses it for 20 to 45 minutes a week. It makes the repeater codes available to all so that anyone receiving interference can shut off the repeater. It is (also) willing to adjust operating times to accommodate other ATV users.”
--

Hollingswoth says that there is no real conflict and therefore the situation does not warrant any FCC enforcement action. (FCC, RAIN)

**

ENFORCEMENT: PRE OPERATION LEADS TO LICENSE SETASIDE

The FCC has told a newly licensed ham that his license grant has been set aside. In a letter to John A Green, KG4RFI, of Mobile Alabama, the commission says that it has information which indicates that he operated on the W4IAX repeater and was also heard at various times on repeaters on 146.685 and 147.090 MHz in the Baldwin County area. The FCC says that all of these transmissions were made during a time that Green did not hold am Amateur service license.

Green was given twenty days from the date of the FCC letter to him to write back and explain certain issues. This includes any instances between the cancellation of his General Class license on September 14, 2001 and the grant of his Technician Class license on January 24, 2002 in which he operated any Amateur Radio transmitting equipment. (FCC)

**

BAMES IN THE NEWS: KD7DDG LOOSES AZ MAYORAL RACE

A follow-up to the story of Tim Weaver, KD7DDG, who was running for the office of Mayor of Glendale Arizona. Well, the votes have been counted and Weaver was not successful in his bid to oust the eight year incumbent Mayor who had the backing of the firefighters union.

The count showed that Weaver had polled only about 24% of the votes needed. Weaver says that the results were disappointing, but respectable for someone outspent and out-volunteered. (RAIN)

**

NAMES IN THE NEWS: RAIN CONTINUES CLEGG RETROSPECTIVE

Hap Holly, KC9RP tells ius that this weeks RAIN Report is part two of a retrospective look at famed ham radio pioneer Edward T. Clegg, W8LOY. This as seen through the eyes of his son-in-law Rob Mc Guffie, K2HZN. Its on line right now in digital streaming audio at www.rainreport.com or analog telephone audio at 827-847-7246. (RAIN)

**

NAMES IN THE NEWS: N9RLA FIRST CENTRAL DIVISION ROVER CERTIFICATE

Some names in the news. First is Dan Evans, N9RLA, who has taken first place as a rover station in the ARRL Central Division. This in the June 2001 VHF contest. Dan is from Scottsburg Indiana. (VHF Reflector)

**

NAMES IN THE NEWS: K8JAC NAMED KANAWHA HAM OF THE YEAR

Also, congratulations to Amateur Radio Newsline's own Jeff Clark, K8JAC. This, after being named Kanawha Valley Amateur Radio Operator of the Year 2002.

A ham since 1981, Clark's Amateur Radio volunteer activities include the post of Emergency Coordinator of Kanawha County, West Virginia. He is also Publicity Director of the Kanawha Amateur Radio Club, editor of the clubs newsletter and technical coordinator of the W8GK repeater. But thats not all. The local ARES group, which Clark coordinates receives high marks from county officials and is often called on to provide communications during civic events and emergencies.

Clark received his award on Saturday, March 16th at Charleston Hamfest. Another Amateur Radio Newsline anchor, Jim Damron, N8TMW, had the honor of making the presentation to K8JAC. (ARNewsline(tm))

**

NAMES IN THE NEWS: WA6ITF TO SPEAK IN JOPLIN MO

Amateur Radio Newsline producer Bill Pasternak, WA6ITF, will be the featured banquet speaker on Saturday April 13th at the Joplin Hamfest. The venue is the John Q. Hammon Trade Center in Joplin Missouri.

Situated about halfway between Tulsa Oklahoma and Kansas City, the Joplin Hamfest is a 200+ table event. It also features spacious parking with easy access, wide aisles, forums, ham radio testing and prizes.

Interested? More information is on the web at www.joplin-arc.org. (ARNewsline(tm))

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

ANNIVERSARY: HAPPY 20TH ANNIVERSARY HEIL SOUND

This week marks the 20th anniversary of a very special company. We are talking about Heil Sound Limited. And when you talk about Heil Sound, you are really talking about its founder Bob Heil, K9EID.

Over the years, Bob Heil has been an audio consultant, an inventor, a musician and lots more. Looking back, He says that everything harkens back to his first love. His hobby. Amateur Radio:

--

Heil: "It's been an incredible ride from a little kid playing pipe organ in the Fox (theater)n through playing with my Harvey-Wells and SX-99 which I still have, and understanding what it took to make all of these things.

“Then I started building different transmitters and then started building sound equipment.”

“We actually changed the world. We are the guys that figured out how you stack and hang speakers. Why? Because I could set up a Rohn 25G (tower) and hang speakers higher than anybody else because of my ham radio.”

--

After years of touring with such number one acts as the Eagles, Bob decided to give something back to the hobby that had lead to his success. Thats how Heil Sound Limited was born.

--
Heil: My life has evolved around 45 years of being K9EID, and I will always be so grateful to everybody in this hobby for allowing me to do my thing and along the way to help someone. Thats the bottom line that we are able to help somebody and it makes me real happy to be able to do that.”
--

Bob is now celebrating the beginning of the company’s third decade with a number of new and innovative products for every aspect of ham radio voice operations. You will get to see all of them in a few weeks and meet Bob in person at Hamvention 2002. (ARNewsline(tm))

**

HANDI HAMS: E-NEWSLETTER MAILING CHANGE

The Handi Hams says that it is changing the way in which the groups weekly e-letter is being distributed in HTML format. According to Handi Hams Pat Tice, WAZ0TDA, constant barrages of virus threats to Microsoft Outlook makes it risky to continue maintaining the HTML list in Microsoft Outlook. So the group is moving its list to a mailer called Group Mail. This says Tice will be bring with it minimal risk of sending a virus to the group of HTML subscribers. The text subscribers continue to receive the e-letter through Yahoo Groups. (HandiHams)

**

EVENTS: 2002 WEAK SIGNAL BANQUET

Tom Whitted, WA8WZG, reports over the VHF Reflector that tickets are now on sale for the 10th annual Weak Signal Banquet. This year the gathering will again be held in Dayton Ohio on Hamvention weekend. If you are interested in attending, more information is in cyberspace at www.wa8wzg.com. (VHF Reflector)

**

INTERNATIONAL - CANADA: RAC SM ELECTION RESULTS

From our neighbors to the North comes word that Tom Caithness, VE1GT is the interim Section Manager for Canada’s Maritime Provences. He was elected for a two-year term, which began March 1st.

Also, Derek Hay, VE4HAY was recently re-elected Section Manager in the Manitoba for a two-year term snd Joe Craig, VO1NA has been re-elected Section Manager for the Newfoundland and Labrador Section for a two-year term. Both take office on July 1st.

All three ran unopposed in their respective Radio Amateurs of Canada sections. This eliminated the need for a balloted election. (RAC)

**

DX

In D-X, the big story is of coarse Ducie Island. The VP6DI team came on the air on March 17th and its was bedlam. Take a listen.

--
audio here
--

Ducie Island is a small, uninhabited atoll in the South Pacific and is part of the Pitcarin Island chain. It is also among the rarest DXCC entities in the world as proven by the recording you just heard. It was made in Australia by VK4DX using a Kenwood TS-570D transceiver and posted to his contest website. (Audio courtesy VK4DX)

**

THAT FINAL ITEM: ARDF CHAMPIONSHIPS IN ATLANTA

And finally this week, the calendar says that its spring and hams around the country are turning to outdoor activities such as new antennas and hidden transmitter hunting. Here's your chance to prove you're the best at the latter activity, as Newsline's Joe Moell K0OV explains:

--

The biggest annual event in on-foot hidden transmitter hunting is early this year, so time is getting short if you want to take part.

The Second USA ARDF Championships will be April 19-21 at Franklin Roosevelt State Park near Pine Mountain, Georgia. That's about 70 miles southwest of the Atlanta airport. No matter what your level of skill or experience at radio-orienteering, you'll be welcome. Experts will be vying for positions on Team USA as it travels to Slovakia for the World Championships later this year. Beginners will be picking up the best RDF techniques from these experts, and learning how to put on similar events in their home towns.

The official deadline to register for the national championships is April 6, but Georgia Orienteering Club urges you to let them know you're coming by March 29, so they can plan food for the picnic supper on Friday and the spaghetti dinner on Saturday.

Learn more about what it's like to be in the ARDF Championships by reading about last year's event in the March issue of QST, and in December and January's issues of 73 Magazine. There's lots more on the subject at my Web site -- www.homingin.com -- plus a link to the registration site for the Pine

Mountain events. That's homingin -- one word -- homingin.com

From sunny southern California, where we're soon having our third practice session of the year to get ready for the championships, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

I've had about a dozen or more Valiants thru the years - a Valiant was my very FIRST rig back in the
late 50's... Properly tuned and operated - and with ACCURATE meter shunts/readings, they will easily
put out around 175 watts of AM carrier on the lower HF bands, slightly less on the higher frequencies...

Wish I had KEPT one of the last ones I restored and moved on to a new owner... (sigh!)

I have a old Laser portable XT, with Mono monitor, Packet Software, MSDOS 3.1, and a word processor.

This setup is in MINT condition. The computer looks new.

Only true lagacy computer collectors should answer this AD.

This computer is completely setup for packet, and would fit nicely in the shack...

I've added a few pics of some of my boat anchors to my website. Nothing anyone hasn't seen before but everyone takes different pictures so there might be something new to see - who knows ?

http://www.vaxxine.com/phil/radio/radio.htm

Suggestions & comments always welcome.

Phil

# 2882. decent mods for Yaesu FT-101ee?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-24 14:40:24 UTC
From: AB Brown <abbrown@nospammail.com>
Message-ID: <a7kofa$cqi$1@nntp9.atl.mindspring.net>
Source record: 43310

Interested in any decent general modifications for a Yaesu FT-101ee. I just obtained this unit and it appears as stock as when it was bought. I'm wondering if there are ways to improve the radio in general, now that 20+ years have passed since it was last sold new. Are there mods to improve the receive audio? How about mods for improving the noise blanker? This is a priority since I can't discern any difference in noise whether the blanker is activated or not. Any transmitter audio mods available? Any known problems? I understand it is best to convert the final tubes since they have become hard to obtain. Suggestions? Any mods to convert to high level modulation for AM portions of amateur bands, like 75 meters?

Any URL's with mods or any personal mods welcome. Just trying to improve the unit a bit. Thanks, in advance, for any useful info.

AB

# 2890. Re: Valiant AM Power Output?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-24 18:04:13 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <xyon8.4599$ov6.3962@nwrddc04.gnilink.net>
Source record: 43318

An easy, efficient method to properly trim and salvage the nichrome wire shunts Johnson used in the
plate and modulator circuits on the Valiant is, once you determine they ARE the problem, to carefully remove the shunts, and crimp regular wire terminal ends to each end of the nichrome wire -
using simple math or an "educated guess" for placement of ONE end to reach proper adjustment for
accurate internal meter readings. THEN, apply power, with the EXTERNAL meter still in the circuit,
and see how close you are to accurate matching readings. You may have to carefully move ONE end
connector up or down the wire to reach an accurate adjustment - at which point, you solidly crimp
that end, and attempt to solder the wire permanently to the connectors - I say "attempt", because
the nichrome is difficult to solder properly - and have had best results with silver solder - but if
crimped solidly, that will USUALLY do the trick on its own...

# 2891. Ten Tec Triton IV Model 540 with options

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-24 18:10:02 UTC
From: David McCombs <dmccombs@houston.rr.com>
Message-ID: <_Don8.54498$Dv6.2316207@typhoon.austin.rr.com>
Source record: 43319

Ten Tec Triton IV model 540 (analog) and 262G matching AC supply with internal speaker and Vox Unit. The 540 has the model 245 cw filter and the model 249 Noise Blanker installed. PTO is silky smooth. Vox unit on the 262G works fine. . Units are a good 7+ cosmetics with typical wear on some of the front panel lettering and some scratches on the cabinet from portable use over the years...and most importantly, a good solid 10+ in performance. Email me for details.

Would like to get $275.00 - shipped

k5fng@arrl.net

Dave

Ten Tec Triton IV model 540 (analog) and 262G matching AC supply with internal speaker and Vox Unit. The 540 has the model 245 cw filter and the model 249 Noise Blanker installed. PTO is silky smooth. Vox unit on the 262G works fine. . Units are a good 7+ cosmetics with typical wear on some of the front panel lettering and some scratches on the cabinet from portable use over the years...and most importantly, a good solid 10+ in performance. Email me for details.

Would like to get $275.00 - shipped ...Paypal ok.

k5fng@arrl.net

My first "big" xmtr was a valiant. Built like a 55 chevy. Mine did an easy 175 watts plus. Maybe closer to 190w or so on 40m. But I used mine only for cw. Never tried it on AM. I remember the first time I fired it up. The 866's lit up bright blue, and I thought they were gassy and bad. I'd never seen a tube rectifier at that point. So I went and bought a new pair and they did the same thing. I finally found out that was normal. I was pretty dumb as a novice about such things. I ended up having to change the 6146's which really were shot. I can't remember what I did with it. Traded it off, but forgot where. It may be running on an AM net these days somewhere in the world...My first transmitter was a single 6v6 setup for 40m I built when I was in the 8th grade."from the 1949 handbook" I learned everything to get my novice then, but got sidetracked with school etc.When I finally got a license when I was 20, I built another one just like it on the same chassis but with a bit bigger transformer. I bought the valiant because it had a VFO. That was a big deal back in those days for a novice. They had changed the rules allowing novices to use VFO's and higher power right before I got my ticket in 77. I only had two xtals on the homebrew. 7.106 and 7.119. The valiant let me try 80 and 15 meters also. MK

Yep, thats the one. But I did mine a little different. I built it on
an old metal surplus radio chassis. My coil I wound and just held the
windings in place with scotch tape. Worked fine. I still have a
picture of the first one I built somewhere. My receiver was a cheap
portable AM only SW radio. I had to use an old tube AM-BC radio next
to it for a BFO. Pretty primitive..My second version I used with an
old HQ-110 receiver. That was my first "ham" receiver. I then later
paired the HQ-110 with the valiant. MK

# 2907. Re: Yaesu FT-101 Tube Question.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-25 01:37:33 UTC
From: Lionel Sharp <vk4ns599@ozemail.com.au>
Message-ID: <3C9E7F5D.67FC88BF@ozemail.com.au>
Source record: 43335

When my FT101E was last checked the power output on the various bands was as follows:

160 125 Watts
80 190 Watts
40 170 Watts
20 150 Watts
15 125 Watts
10A 100 Watts
10B 100 Watts
10C 80 Watts

Perhaps you can get more power with new tubes but you would not notice any difference at the receiving.

Best of luck in obtaining Toshiba 6JS6 tubes for the final, they would be very hard to locate and of course expensive. Some other brands (not all), I believe, are a little taller which means you may not be able to put the top back on the P.A. enclosure so check out the size before you buy. Remember size does count.

Ideally the 12BY7 should be made by Toshiba. They were made to pretty tight specifications and the driver stage is neutralized with a fixed value capacitor. You may or may not have problems with other brands.

And remember to find where to get a new power tranny when it bites the dust.
I am repairing one now with that trouble. Tranny's are made with wire coated
with melted plastic, and runs off hot wires. I have some old tranny'a with
enamel coating still working after 70 years. I doubt any of the modern ones
will last very long. The set was designed with a certain power o/p in mind.
To exceed this is looking for trouble
Jack

You need a 600-8 ohm transformer.
You can get away with a small 110-12V or Junk Shack 70 volt line transformer
for now,
I wound my own high efficiency torroid for mine, "Im real picky about my
audio"
I have small 800-8 ohm transformers that work well at $10 if you need.

Source record: 43343

Have a look in some of the late 1950s/early 1960s ARRL Handbooks. Similar T-R switches can be found in there. Basically, during transmit, RF from the transmitter swamps the tube, preventing RF from reaching the receiver. In receive, the tube acts as an untuned RF amp (unity gain, or sometimes slightly more) for the receiver. Hope this helps. Cheers es 73. Harry, VE3GRO

## 2917. Elmac A-54

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-25 03:22:07 UTC
From: iron3@charter.net
Message-ID: <u9t7qtqddkc41a@corp.supernews.com>
Source record: 43246

Hi,
I have an Elmac A-54 (Not the A-54H)

The book says this model needs a carbon microphone.
Anybody know where I can get one or:

Any mods to allow the use of standard mics as the D-104.

Respond to iron@skyride.net
Thanks Jim

## 2918. Galaxy V schematic

I need a Drake AC-4 power supply so I can put my
C-Line on the air:
- Prefer working, will consider a fixer-upper.
- Not interested in hacked up or modified units.
- Not willing to pay ridiculous eBay prices.
- I'd rather not have to buy a whole station just
to get the power supply.

Anyone who would pay more than $600.00
for ANY jap radio junk should have their head
examined. Next time, remove the screws and
look under the covers of that Icom, Kenwood
or Yaesu. (Ham or SWL radio) They all look like
the inside of a cheap Korean or China made VCR.
Complete with el-cheapo thin-walled plastic blow-mold
polycarbonate panels and non-plated recycled scrap
steel chassis frames and uncoated PC boards that
sap moisture from the air like a kitchen sponge in New Mexico .

There ain't been any good SOLID radios produced since Collins
stopped making the KWM-2 and the days of National, Hammerlund, Gonset and SBE.
I go to Dayton every year and see grown men slobbering over
some jap-made radiotoy that's not much more that a bells and
whistles gimick loaded gadget box. To think some of em
are actually proud to say on the air they paid 3 Grand for a Yaesu!
What fools. No wonder the japs laugh all the way to the bank.

(thank you Sid, K5BLB - you wised me up to this utter junk they call "radios" today!)

# 2934. QUES: RME-69 Various Paint Colors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-25 14:38:50 UTC
From: rs66@webtv.net
Message-ID: <22441-3C9F367A-271@storefull-2333.public.lawson.webtv.net>
Source record: 43262

I recently bought an old, beat-up RME-69. It was apparent that black paint had been slopped on over the original wrinkle finish. When cleaning off the slopped on paint I discovered that the wrinkle finish underneath was light blue in color. I checked various places on the cabinet to verify that the blue was indeed everywhere (even under the dial bezel) and that it was virtually indestructable (lacquer thinner didn't affect it.) Looking at some old QSTs, I noticed that RME mentioned in some of their late RME-69 advertising (1939) that "new colors" were available. I have heard of black and gray but never blue. Has anyone seen of colors on RME-69 receivers other than black or gray? I also heard of a tan-brown color. Has anyone seen that variation? Thanks for any information.

this is considerable better that the FT-901 or FT-902 using 2x 6146B's
(according to my handbook and according to my measurements), so 6JS6
seems to be a much better tube

on 80m I get hardly more than 120W with FT-902, and lower than 100W on
all other bands

While 6JS6 may last 20 years with careful operation, 6146 will sicken
long before this, heard about an owner of Galaxy V mk2 transceiver who
still used the original 6HF5 tubes and they were still at least 90%
good

>will last very long.

The older transformers used to be derated a lot more than modern ones, but the modern plastics are a lot longer lived than the old varnish-dipped stuff. Unfortunately, it means that manufacturers can now overrate their products because they can run hotter without damage.

There are a lot of crappy modern transformers out there, but good quality modern stuff will outlast the good quality stuff of 50 years ago.

>The set was designed with a certain power o/p in mind.
>To exceed this is looking for trouble

The set was designed to be inexpensive disposable gear with cheap sweep tube outputs. It was not intended to last like high grade military stuff is, and was built with cheap components. If you run it at the rated power, you are looking for trouble as it is.

sap moisture from the air like a kitchen sponge in New Mexico .

There ain't been any good SOLID radios produced since Collins
stopped making the KWM-2 and the days of National, Hammerlund, Gonset and
SBE.
I go to Dayton every year and see grown men slobbering over
some jap-made radiotoy that's not much more that a bells and
whistles gimick loaded gadget box. To think some of em
are actually proud to say on the air they paid 3 Grand for a Yaesu!
What fools. No wonder the japs laugh all the way to the bank.

(thank you Sid, K5BLB - you wised me up to this utter junk they call
"radios" today!)

# 2945. FS Old Tymeter GMT Clock

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-25 18:47:42 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <ihKn8.4867$xa5.272655@newsread1.prod.itd.earthlink.net>
Source record: 43272

I have for sale a Tymeter Model 100 GMT 24 hour Clock. It is old, dated Oct. 1958 on the bottom.
It does not work, but makes a humming noise like it trying. The case is good, not cracked. The seconds wheel has the numbers rubbed off, but everything else is there and in good shape. It would make a good parts source. I am asking $10 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

## 2946. HELP!!!

I am looking for the Accessory Cable #2 that connects the YO901 Scope
to the FT901/902DM transceiver, or a pair of male & female connector
to build my own cable.

Does anyone have this cable lying around in their shacks?

Mark

Hi Joe, Thank you for the reply. I'm a 50 year old shortwave listener
that enjoys vintage
equipment.
I'm scrapping the poor paint job off this radio and am trying to get
it to the point to see if I can
get it operational, I will most likly sent it over to someone who knows
alot mor about them then
I do. I will take you up on your of a transformer, but for now I do have
a 110/12.6 ttansformer
the primary side resistance is 150 ohms and the secondary side is about
2 ohms which side do I hook to the speaker?
Thanks for your help
Dan Weston

Primary to 600 ohm output of radio and secondary to speaker which gives
roughly 76X impedance transformation.

I wouldn't leave them there. 6L6s will increase the secondary load on the completely irreplaceable power transformer putting it risk of overheating and relasing its smoke. They may also exceed the current rating of the 5Z3. The original output transformer if present will not be a proper match for 6L6s either and wouldn't like the extra plate current, leading to more smoke release.

As the old saying goes: If it's not f***d, don't f*** with it.

Morris

# 2967. Heathkit T-4 signal tracer, strange serendipity

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-26 12:54:41 UTC
From: George Gonzalez <grg2@attbi.net>
Message-ID: <lc_n8.3133$K13.736430@typhoon.mn.ipsvc.net>
Source record: 43198

I've had this one Heathkit T-4 signal tracer for years, never thought about
it much,
just used it as needed.

I've been working on this one dog of a signal generator for weeks.
It's hollow-state, but never mind, tubes do enter into this story:

It would go into a random noisy oscillation (squegging) at some points on
the dial. Nothing seemed to help.

Then I got the idea to use my old Heathkit signal tracer on it.
But ^&%*&%&(!! tracer must be broken, I don't hear any funny
squegging when I touch the signal tracer to this one test point.

No, that's not it, the oscillator is behaving itself now.

I lift off the test probe, and the oscillator messes up again.

Somehow, just holding the signal tracer probe on this test point
FIXES the problem!

Now this is mighty unusual, as the signal tracer probe goes into the grid of
a 6AV6 I think. Not much of a load there, and this test point is a low
impedance point in the circuit.

I figure, Aha, this test point needs a few pf of capacitance, or maybe 470K
of resistance to ground. Not the optimum fix, but will do in a pinch, until
I find the real problem.

So I try putting 50pf on the test point. No good, still squeggs.

So I try putting 470K on the test point. No good, still squeggs.

I try putting both, no good, still squeggs.

What the ****?? I can't leave this signal tracer hanging on here,
that would be a tad unprofessional!

After thinking for a minute, I decide maybe the only explanation
is that the signal tracer is somehow feeding back a few microamps into the
test point. I put the meter on there--- the signal tracer is feeding 1.4
milliamps back into the test point!

It turns out the signal generator just happened to need about 1.4 milliamps
there to stop the squegging. I hooked up a power supply
thru a 10K resistor to that point. One milliamp wasnt enough.
One point two was almost enough.
One point four stopped it!

Whhat are the odds that I'd have a sick signal tracer that just
HAPPENENS to put out a leakage that is JUST the right amount,
the right polarity, just what the
doctor would have ordered?

---

I open up the T-4 tracer, wondering what the problem is. Turns out
there's this little slide switch on the fron labeled "noise".
I never figured out what that was for. It didnt seem to do anything,
and it was set to"ON" by chance. Turns out when the switch is ON,
it feeds 150 volts of B+ thru a 68k resitor RIGHT OUT THE PROBE!

I can't begin to guess what this is useful for. Sure, it injects a loud
CLICK into most any circuit, but that's not exactly "noise",
and it's not a common signal-tracer function.

Any ideas what this was supposed to do?

Regards,

George

Hi, George.

Saw your interesting tale of the signal tracer fixing the signal generator. I'm not familiar with the Heathkit T4 specifically, but maybe can offer an opinion about the "noise" switch.

I used to have a signal tracer (all-in-one probe type) whose output was sort of tone modulated, kind of harsh sounding like a triangle wave. I think this was done so an AM receiver would produce a tone from the speaker when the signal tracer was applied to any RF, IF, or AF signal point in the receiver.

I *think* this sort of test signal doesn't work well in an FM receiver because the FM demodulator won't detect a tone-modulated AM signal from the tracer. For FM work, a broadband noise source is more useful for signal tracing in the RF and IF stages. (In the audio stage, the AM modulated tone would again be useful.)

SO, I am guessing that the "noise" switch position is intended for FM receiver work and the other switch position (whatever its name) is for AM receiver and audio amplifier work.

Even so, I am very surprised if DC is reaching the output of the probe. Is there perhaps a DC blocking cap which has gone leaky in the noise generator path?

Other folks who are better informed than me about the T-4 may be able to shed more light on this.

Anyway, sounds like you're having a good learning experience which is part of the fun of servicing this old electronic gear.

Best regards,
Joe

Partial Manifest of Auction in Houston, Texas April 6

http://www.hvra.org/2002-04-06_manifest.htm

Map at: http://www.hvra.org/events.htm

One of the senior member of Houston Vintage Radio Assn.
Bob Wood is thinning his collection. Over 100 working Radios.
plus some fixer- uppers of Mr. Wood's will be Sold on the 6th.
Mr. Wood will be at the auction for ? on the radios.

Many Nice Radio
Cathedrals, Tombstones, Table Sets and early Phonographs.
Also Radios from Bill Moore and Bill Werzner collections.
Location
American Legion Hall Post 560
3720 Alba,
Houston, Texas 77018

Saturday, April 6, 2002
Check-in: 9:00 AM
Auction: 10.00 AM

> 6V6's should provide enough sound for both me and my neighbors.

They will. The 6v6/6l6 swap is fairly common on geetar amps, but you
would need the power supply capabilty, and would need to be rebiased,
etc. I would stick with the 6v6's. In a geetar amp, two 6v6's might
give you up to 20-25 watts max.
Most don't push them that hard. Two 6l6's are good for 35-40 watts
easy. One reason they may have swapped them is just because the pinout
is the same and they had the 6l6's laying around. But I don't think
it's a good idea in your case to use them. The power supply is not up
to the abuse, and the tubes would need to be rebiased I think to run
properly. Two 6v6's will make a pretty loud amp. IE: fender champ,
princetons, etc..Average 12-18 watts output usually. Ands thats a LOUD
15 watts!!! The fender deluxes, etc use the twin 6l6's to get appx 40
watts. And that 40 watts is REAL LOUD!!!! I'm presently using a fender
blues deluxe with twin 6l6's for 40 watts and the sucker is so loud
it's almost unusable in a house setting. I can barely crank it up, and
thats bad for my tone. I need to really crank to the gills to get the
tone and sustain I like, so I actually prefer a smaller amp with the
6v6's. MK

## 2977. Where's the FAQ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-26 19:36:34 UTC

Source record: 43205

I was wondering about the appropriateness of posting FA notices.

Meantime, I've already killfiled a couple of the worst offenders -- so they can be assured that their time constitutes an even greater waste of bandwidth. At some point in the future, all those backed-up bits are gonna spill back through the modem and inundate their basement.

A lot of old radios will be ruined forever.

Think about it ....

Yep, I will second all that!
The 6V6's will also sound better in the SX-28, someone likely dumped Chinese
or Sovtek 6L6 in it as a cheap replacement.
The original old 6V6's play a major MAJOR part of the SX-28's much loved
audio
NOS 6V6's are more $$ but sure sound great on 8 in my old Fender Deluxe
geetar amp.
Cheap eastern block tubes these days just look great shorting out in my red
Marshall JTM turned down to 11,
blue flashes, sparks, smoking bases, pops.....like a KISS concert.

Ugh! I went to look at my beater NC-57B, to see if I could pull off the emblem
and sell it to you at a fair price. Well, it's a "beater" only cuz someone cut
a hole in the front panel for an S-meter (a modern edgewise type, not the right
style for the radio). And guess where they put it -- top center, right above
the BS dial, where the emblem *used to* be!

So I don't have one either -- and have no place to put one if I did.
Well, you can't blame some budget-minded Ham for making a decent radio a little
better 30 years ago. He even added a 7-pin tube sub-chassis as a meter amp.

Actually, my '57 is otherwise not bad looking, and plays great.

There's a good military band march called "National Emblem" -- wonder if it was
played at National company picnics :-) 73 es gud luck, Mike K. AA1UK

I've heard that the DC voltage applied in the "Noise" test is deliberate. You use it to check for leaky caps that are breaking down intermittently -- the infamous "thunderstorm" effect. Since such caps do this only under operating voltages, the signal tracer applies some reasonable amount of B+, thru a safety resistor, and "listens" (on the other side of its own, better-be-good blocking cap) for any resulting breakdown noise in your cap under test.

You should be able to use this test on screen bypass caps, and coupling caps. Of course, with those you could just turn on the set, and listen passively with the probe.

I think the B+ noise test was intended for caps ou tof the circuit, as with the screen dropping resistor temporarily desoldered. Hope this helps, Mike K. AA1UK

Actually they're Tung-sol, this radio sat in an attic for at least 25 years, and probably hadn't been used for many more. Maybe I'll find somebody who wants to swap. I haven't tested them yet so can't say how well matched they are. I do know they're quite capable of making a very loud 120 cycle hum.

Discovered another oddity on this radio today; there's a small black pencil-eraser sized plastic cap mounted near the headphone jack; it has a very small hole in it, with one wire going to the AF gain control. It looks almost original, but I've never seen any others with it. Is it a temperature sensor of some sort perhaps?

The EICO 147A signal tracer, a common and popular unit, also has a "noise locator" function. The fifth page of the manual says this function will show up noisy and intermitant resistors, pots, caps, and cold solder joints. You might want to download part of the manual (BAMA?, Nostalgia Air?, or try a Google search) for a full description, cautions, and use.

Greg

<< I'll definitely be going back to 6V6. I'd like to keep it as original as possible.>>

Check R42, the bias resistor on the 6L6/6V6's, to see if it's to spec or if it has been changed.

<<a small black pencil-
eraser sized plastic cap mounted near the headphone jack>>

Never heard of that. Check the AF circuit against the schematic to see someone hasn't messed around with it.

>

Just realized that was a poor choice of words. Not cap as in capacitor, but cap as in a small, button-like object, mounted on the faceplate, with a small hole as if to let in air. The backside (inside the radio), it's mounted with an insulating disk and lock washer, and it looks like the tip of a bullet, with a wire soldered to the tip, going to the AF control.

I haven't found R42 yet, I assume it's buried in the rats nest by the V13 & V14 sockets; The power supply filter, CH1, is definitely not original, although the specs are close, not sure if that's something that would fry from overloading. One of the electrolytics is also not original, but is presumed bad (passed dim bulb test with no tubes, failed with rectifier tube in). They're all getting replaced obviously.

I will say this radio is quite a challenge for somebody with limited skills, but I'm planning on taking my time to do it right. And the help I get here is definitely appreciated!

# 2996. Early Drake TR4 Schematic

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-27 16:02:55 UTC
From: Carl Strode <crstrode@webbworks.com>
Message-ID: <3CA1ED2F.A16CB45B@webbworks.com>
Source record: 43223
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I need a schematic for an early TR4. Serial number 16000 series. This unit has the original
factory inspection tag still
attached with a 1965 date.

I Currently have three (count 'em -three) schematics for the TR4, none of which match mine.

I downloaded the one from BAMA (19500), and have one in an original Drake manual. The one in
the manual does not have a
date code at the bottom, but at least it has the 6HS6 at V4, so it is probably close. I also
have an original schematic
with a code for the 27000 series TR4.

Those guys at the Drake factory must really have been earning their keep! It seems like they
were cooking up a new TR4
design each month!

Please help - next stop is the looney bin.

Hi All,
I just found a Stromberg-Carlson Model 601 in very good condition at a local store. It appears to be intact with the original cards still inside the cabinet. The wood cabinet is beautiful and the chassis appears to be intact with no mods that I can see. It looks like a battery operated set.
Does anyone have experience with this set and/or know what it should be worth in very good condition?
Thanks...
Mark S.

The backside (inside the radio), it's mounted with an insulating disk and lock washer, and it looks like the tip of a bullet, with a wire soldered to the tip, going to the AF control. >>

Bet it's a probe jack for a scope input.

<< I haven't found R42 yet, I assume it's buried in the rats nest by the V13 & V14 sockets; The power supply filter, CH1, is definitely not original, although the specs are close, not sure if that's something that would fry from overloading. One of the electrolytics is also not original, but is presumed bad (passed dim bulb test with no tubes, failed with rectifier tube in). They're all getting replaced obviously. >>

R42 is the big fat 2 watt resistor - one end soldered to a ground in the upper corner and the other end soldered to the 6V6 grids.

<< I will say this radio is quite a challenge for somebody with limited skills, but I'm planning on taking my time to do it right. And the help I get here is definitely appreciated! >>

This was the first and ONLY receiver I EVER restored. It took a year, and a lot of reading, but if I can do it, anyone can! Good luck. - Joe, W1GFH

> release.

FWIW (we know you are pulling them now), the main consideration is the amp of extra filament current the pair is drawing. Practically speaking, there won't be meaningful operational plate current & output impedance differences used in the 6V6 ckt, and many of us have subbed with them in a pinch. They won't sound as good as 6V6's, which were designed for low-current filament and good low plate current performance, will generate a lot of heat, and may overstress the filament winding of the pwr xfmr.

# 3008. Re: Stromberg-Carlson model 601 questions.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-28 00:44:24 UTC
From: Chas <shortcircuit@attbi.com>
Message-ID: <3CA267B3.9E7CAF6B@attbi.com>
Source record: 43076

Your S-C 601 is worth between $125-175. less tubes. You should check the dial drive gears and the audio transformers, if these are in good condition and you have a set of functional tubes $225. on the East coast, YMMV.

Gear replacements that have to be machined to fit, are available from Boston Gear. If these gears, they are bronze, have been installed add at least $50.

It is a Neutrodyne TRF type receiver, what is impressive is it's Battleship construction.

Regards,

Charles

6L6's might probably last longer than 6V6, and since you already have
them and no harm has been made with the larger heater current, I would
check if 6L6 could give similar performance to 6V6

It would be a good idea to study and compare the types to see if you
can operate 6L6 with same impedance and currents compared to 6V6, why
not check the data at http://frank.nostalgiaair.org/sheets6.html

Be sure to check out Phil's page on restoring the SX-28:
http://antiqueradio.org/halli12.htm - this was one of the greatest
helps I had in doing mine. With what's on this page, and some great
advice from folks here, I was able to work on all parts of my 28,
including taking out each divider in the RF section (even though I was
absolutely *sure* I couldn't do that!! ha).

This radio is indeed something of a bear to work on, but the rewards
are absolutely worth it!

# 3030. FS: RS 242 WW2 German power triode

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-28 10:47:31 UTC
From: arnoldg@c2i.net
Message-ID: <3ca2f509.9000895@news1.c2i.net>
Source record: 43157

Hello,

I have several of this antique globe shape German triode in stock. It is directly heated, an European 4-pin base and about 12W anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max. anode voltage is 400V.The valves are NOS, but the boxes are mostly in bad shape. Pictures are available by e-mail.
Please contact me if you are interested.

Regards,

Arnold Goksyr

DEMOSTENES - N6899 Balestrand, Norway

Carl

It is always worth checking Drake's web site for availability of
manuals. I managed to get an original manual for an early 1970s
receiver from them a few weeks ago (and cheaper than photocopies
offered on the net). In your case I had a quick look but they are out
of stock of the TR4 stuff.

# 3033. FS: Original Drake TR-4 Transceiver Instruction Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-28 14:20:14 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3CA31EE8.E233FABE@teleport.com>
Source record: 43160
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: Original (not a "copy") Drake TR-4 HF SSB Transceiver Instruction Manual. There's a note on the first inside page of "#26281", which I'm assuming is the serial number of the radio that originally came with this manual.
The manual has alignment info, schematics, voltage and resistance charts, installation and interconnect info, tuneup info, info on the AC-4 and DC-3 power supplies and RV-4 Remote VFO. $15 plus postage.

# 3034. FA Cabinet for SX-73, SP-600, RA-17, R-390A Receivers

Newsgroup: rec.radio.amateur.boatanchors

Source record: 43161

Please see my auction for a very nice Rack Mount Type Cabinet that is perfect for those long receivers such as the Hallicrafters SX-73, the Hammarlund SP-600, and the Racal RA-17. The Cabinet will also work fine for the Collins R-390s and R-390As. This one is a gray heavy duty steel cabinet and it looks great.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1342066710&ssPageName=ADME:B:LC:US:1
Also, please see my other auctions for a Rare Drake RCS-4 Remote Antenna Switch including Console and Remote Unit.Thanks, Charlie Hugg, K5MBX

# 3035. RME converter

Newsgroup: rec.radio.amateur.boatanchors

From: Carl Hoffmeyer <c.hoffmeyer@worldnet.att.net>
Message-ID: <eVHo8.10266$se.996298@bgtnsc04-news.ops.worldnet.att.net>
Source record: 43162

Hello. I'm looking for info on a piece of RME
mystery gear. The front panel dial face says
VHF-152A and the metal label inside reads VH 76A.

Lord's knows where I got this (after 40 years
of acquiring stuff you start to lose track ;-)

My guess is that it's a VHF receiving converter.
It has three switchable bands for 10, 6, and 2
meters, and is likely intended to deliver RF to an
intermediate frequency that a HF communications
receiver can get at.

I would appreciate any leads on manuals, schematics,
and tuneup procedures.

Thank you,
Carl (formerly WB2YHE)

Take a look at the manual at:
ftp://bama.sbc.edu/downloads/rme/vhf152/

Yup, it's a converter. I have one that I started cleaning
up but haven't finished it.

FS: URM26 military signal generator 50 to 400 mhz in good shape- $75 +ship

Ten Tec Omni V option FM Board like new with the cables -$90 shipped

38 Special (s) 30 meter qrp rigs. I in a case needs minor repair and one new one on the board built and tested. Includes manual-$55 for both!

Wanted: Ten Tec 221 filter, paddle -iambic -no bencher or vibro please, Eddystone dial for hb receiver project, and clean 2NT. Thanks for the read and 73s Lew KlNDV

# 3042. Fs: WWII BC-1206 Beacon/Lowfer Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-29 00:23:44 UTC
From: Bruce Stock <ab7yd@earthlink.net>
Message-ID: <kuOo8.2554$BT6.214903@newsread1.prod.itd.earthlink.net>
Source record: 43169

These are perhaps the cutest and smallest Beacon/Lowfer receivers made. The BC-1206 covers 195 to 420 kc, using 5 tubes, in a package only 4" x 4" x 6 5/8". It runs on 20-28 Vdc for both filaments and plate voltage.

This unit is in excellent cosmetic condition, and comes complete with the original packing box and original manual. See a photo of the unit at:

http://home.earthlink.net/~ab7yd/radios/bc1206.jpg

Use it to surf your local NAVAIDS beacons, or whatever. Price is $30 plus shipping from Seattle.

Regards, Bruce AB7YD

Anyone who would pay more than $600.00
for ANY jap radio junk should have their head
examined. Next time, remove the screws and
look under the covers of that Icom, Kenwood
or Yaesu. (Ham or SWL radio) They all look like
the inside of a cheap Korean or China made VCR.
Complete with el-cheapo thin-walled plastic blow-mold
polycarbonate panels and non-plated recycled scrap
steel chassis frames and uncoated PC boards that
sap moisture from the air like a kitchen sponge in New Mexico .

There ain't been any good SOLID radios produced since Collins
stopped making the KWM-2 and the days of National, Hammerlund, Gonset and
SBE.
I go to Dayton every year and see grown men slobbering over
some jap-made radiotoy that's not much more that a bells and
whistles gimick loaded gadget box. To think some of em
are actually proud to say on the air they paid 3 Grand for a Yaesu!
What fools. No wonder the japs laugh all the way to the bank.

(thank you Sid, K5BLB - you wised me up to this utter junk they call
"radios" today!)

I wonder what he looked inside of that got him all crazy like this. Has he ever looked inside, or used one of the JRC commercial receivers, or a 505/515? I doubt it.
Has he ever used a Yaesu FT-1000D (THE best performing reciever, Collins, Racal, and Harris, and others included, I have ever used!)?? He probably looked at a Kenwood R600, or maybe a Yaesu FRG7000, and he didn't like the "brown" PC boards he saw. Those (and others), WERE CHEAP, but they seem to be holding up well after all these years...
I would rather have a solid aluminum front panel, but polycarb is lots better than styrene, that's for sure. And for a handheld/portable, I wish just one of them older ones I dropped would have been polycarb.

My $.02 worth...

I LOVE Collins gear! I've owned several S-lines and a couple of KWM-2's. Sold the last of it only about a year ago. They have a sound all their own. HOWEVER... when the atmospheric noise moves in, shut down the Collins and go read a good book. With a ricebox, just engage the noise blanker and keep on talking.

I don't share "Lugnuts'" view of Icom, Kenwood and Yaesu. I think they're all outstanding performers... some a little more outstanding than others. You also won't need a supply of spare parts to keep 'em running. If he inherently doesn't want to send his bucks overseas, take a look at TenTec and Elecraft... both American made and both among the top performing radios in the industry.

The only JRC I've ever tried... a receiver +/- 10 years ago... impressed me as the worst piece of junk I've used since my S-38 in 1951. It was **HORRIBLE**. Of course it also belonged to an Electrical Engineer who is not a ham... no telling what he might have done to it before I used it.

Ed, W5EJ (or do I need an alias to participate in this thread?)

My JRC twins have been in daily use for over 20 years.. NRD and NSD
515 RX-TX twins. The receiver features are a bit dated, but certainly the
RF performance of the NRD-515 was among the top contenders when it
was made. As long as I can work what I want and when, I'll keep them.

Most of the new radios will be obsolete by design, or the fact that
replacement
parts will be no longer available when they start failing in the next
15 or so years.

Custom uProccessor ICs, ROMs, etc. all fail, and when they do the devil
will
get his due when replacements are not to be had. Ditto for many of
the custom LCD panel displays.

Oddly enough, the older technologies seem to be the most
repairable, even in this day and age tubes are still plentiful.

FS complete packet setup and all manuals and cables in great shape. $100 shipped. Thanks for the read.

# 3064. Re: Yaesu FT-101 Tube Question.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-29 19:33:33 UTC
From: Ron <bofars@ntlworld.com>
Message-ID: <nk3p8.9325$2b4.1353497@news11-gui.server.ntli.net>
Source record: 43191

there is a guy in the UK g3LL who wrote a series of articles on the Ft101 range in a mag called Ham Radio Today (now defunct) years ago .
His main statement on the FT101 is that the biggest cause of the power supply and or the tube s to go is capaictor C13 from the 12by7a anode to the screen grids. Its 80pF at 1KV. its not up to the job . he suggest replacing with a 80pF or 100 pF rated at 6KV.

Also the cap c131 1000pf at 1KV replace with 1000pF at about 6kv cos that also causes similar trouble. I think from memory that c131 is switched in on 160m and or 80m only.

He suggests that befor ereplacimg tube s check that this cap is not faulty cos if you put in brand new valves thate power suply will go and leave you with a irg that is useless , unless you make an exterb nal supply.

G3LLL also had a double balanced mixer board (made the rx superb) and an rf clipper (for those rigs without Specch processor)

I hope this is of help

You'll have a hard time finding a choke with 20 H capacitance (might find one with 20 H inductance though).

Ok, the big question is the LOADING of the pi-network. I received the rig with a 'repaired' bandswitch and have attempted to put it back to normal. I see that the third section of the loading cap is switched in on 20, 40 and 80, but that doesn't seem to be enough total capacitance on 40, much less 80. If I add about 400pf more I can get a good peak on 40, and it takes about 800pf on 80.
With the type of switch thats on there now, I can add the respective capacitance but I can't help but wonder if I'm doing something wrong/silly??? I can't imagine they would have made the rig to where it 'wouldn't work'. Anybody else notice this?
I'm tinkering with a known good dummy-load, btw. The rig tunes properly on all other bands.

Next...the sidetone osc. Supposed to use a 2N2646 UJT. I found a ECG123A subbed in. No, it doesn't work and I wonder if it ever did. I can't imagine why someone would sub a bipolar transistor in place of the unijunction unless this was a 'mod' that was purported to work. Any ideas? (I'm a little shocked to find a replacement 2N2646 is a $6 part these days!)

Tnx for ur time,
Bill WX4A

Spring has sprung and the seasons first FLEA at MIT
is just a month away.....

*** GREAT NEWS We again have full use of the garage and outdoor
lots for sellers !!!

**********
**********

Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 21st 2002
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

SEASON PASS + Advance Discounts

A sellers discount season pass is available untill
April 21st which offers a 33% discount. See the
registration form below for full seller info.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

********** $1 buyers discount with hard copy of this notice ************

To be a PrePaid Vendor for the April SWAPFEST, Mail the coupon below
by April 10th.

FLEA at MIT 2002 Rates

SELLERS

This year each vendor must have a Cambridge Vendor License.
We will do all the paperwork to get the one day Cambridge licenses.
To keep the spaces affordable we are discounting your first space.
To use your spaces the named vendor MUST be present.
Rates include one admission per space.

Season Pass $99 First Space - includes $70 for Cambridge Vendor Licenses
$70 Each additional space

Advance $17 First space - includes $10 Cambridge Vendor License
$12 Additional Spaces
Must be received by the 5th of the month.

Gate Admission $20 First Space - includes $10 Cambridge Vendor License
$15 Additional Spaces
Admission is after the prepaid vendors

Early Bird Buyer -Admission after the prepaid vendor line is admitted. ~ 7:15AM
** You may not sell. **
$15 per person at the gate.
$70 Season Early Bird Buyer

Hi Gang:

I have a clean copy of the 1958 ARRL Handbook that needs a new home. It is very clean and complete. At one time it may have been exposed to some humidity but the pages are all clean and do not stick together. There is SLIGHT water damage to the bottom of some of the pages but it is hardly noticable and does not detract from the book in any way. I am asking $15.00 shipped by Media Mail rate. If interested please reply by e-mail.

Source record: 43106

hello all,

I like to modulate a 400 watt pa (carrier).
I need a good and not to expensive way to do this.
A transformer from Zin=8 ohm to Z out = 800 ohm is hard to get or to build.
so I am looking around for the Heising way.

But is this the better way?
any experience?
what to do for best results? (100% mod)

please help me out.

grx hans

# 3088. help needed with Yaesu FT-101ee

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-30 23:27:18 UTC
From: AB Brown <abbrown@nospammail.com>
Message-ID: <a85hj6$olt$1@slb6.atl.mindspring.net>
Source record: 43115
Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I just burned out a final tube (6JS6C) in my Yaesu FT-101ee today. I wasn't sure of the cause and still am not, but when I placed the bandswitch in the 160 meter position, and with the heater activated, the radio lights went dim. By the time I switched bands, the one final tube was gone. This all happened without activating the PTT. I wanted to find out what happened, so I reinstalled the good and bad tube and duplicated the conditions: 160 meters, heater on, PTT not activated. Immediately, the lights dimmed once again and the IC soared to over 0.15 mA with the bad tube in place. None of the other bands cause this problem. With the tubes removed, the "short" doesn't occur on 160. What can be the problem? At first, I thought the tubes but why wouldn't the other bands cause the same results? I did recently rewire the transceiver to enable the CW position to be able to use the AM filter. Could a rewiring mistake cause the symptoms on 160? Note that I also get a strong CW sidetone when the bandswitch is in the 160 position and mode on CW. This is only when the tubes are in place. Heater on and PTT not activated.

Can anyone help me figure out what the heck is going on?

Thanks,
AB

I have obtained an interesting Antenna for which I am looking for some
Technical Information.
It is called a Cliff-Dweller and was Mfd by New-Tronics Corp probably in
1960-1970 era.
It is basically a rotatable dipole with a motor drive in the centre of the
dipole that moves the elements in & out until resonance or Low VSWR is
obtained. I have the two end coil assy & control box, but am looking to
resurect this Antenna by fabricating the centre/motordrive section, but need
Technical Info so I can try and ascertain just how it operated.
Any assistance would be appreciated.

<spud286@attbi.com> wrote:

>Running three 6146 for RF should provide about 50 watts of carrier output
>depending on the efficiency of the rig.

Don't confuse power output from a plate modulated Yaa Yam rig with a
PW little controlled carrier AM tx.
Th controlled carrier rigs have to run at about 25% of PEP. i.e. a
pair of 6146s that give 100 watts out run at 25 watts on AM. But the
REAL AM rigs that are plate modulated class C rigs smoke!
So the correct answer is.......... (ta-da !! drumroll please)
three 6146s should do about 90 watts input each or 270 watts and put
OUT in the neighborhood of 200 watts.

I have a rotatable dipole and all I have to do is vary the length of
the ladder-line at the transmitter. That's a lot easier than varying
the length of the elements at the antenna.

Mine did the same thing...the tubes went into self oscillation when
power was applied and they were executed in the proccess (well one was
anyway). Nothing was wrong with the radio...check the output PI
network for any damage caused and replace the finals..if you use
Sylvanias replace the 100pf cap in sreies with the neutralization
variable with a 10pf silver mica piece.

Thanks Art. I also noticed that, while unkeyed on 160 meter position, I get CW sidetone through the speaker, when switched to CW mode, with the good and bad tube still in place. The sidetone doesn't start until the tubes start warming up. Of course, none of these symptoms are present when I remove the tubes.

A strange, very isolated phenomenon to say the least! At first, I thought I rewired the switch incorrectly after installing the AM filter, but then the symptoms wouldn't occur once the tubes were removed.

I just received this radio by mail a few weeks ago and the tubes weren't removed during shipment. I wonder if this could have weakened them. Before I even modified the switch, I had to replace several components in the bias network because the current had soared.

Just looked over the manual, stared at it for a while, and not knowing exactly what you did to enable cw thru am filter, can suggest to check for obvious wiring mistakes. But further, with PA tubes pulled, can you get a wattmeter hooked to the "RF OUT" jack? This is the low level driver output for a transverter, etc. Should be on the rear next to the ground terminal. I suspect that for some reason you get the sidetone osc enabled with no key connection(which I recall trips the vox and keys the rig), and this is just blasting full drive to an untuned PA. Remember, the tuning is VERY broad on 160. You'll get drive no matter where the drive tuning is set, in my experience. It may not have done this on other bands simply because the setting of the driver tuning was not peaked for that spot on the band.

However, the only in 160 thing about sidetone really suggests a wiring mistake, that you'll need to trace.

Hope you find it. These are fine radios, I have three...

Cabinet condition and appearance in NOT important to me. What IS important is that it has the original Halli speaker (3.2ohm?) and that it is working perfectly electrically i.e. NO RE-CONEING NEEDED and developes full unmuffled audio. I am going to swap the speaker and x-former into a pristine cabinet. Actually, the cabinet is not needed at all. Thanks for your help. 73

Continuing my 2 year search for (the right) Johnson Courier that is a 10 electrically and an 8+ cosmetically. I will match this with a (new) Ranger II and use the combo daily ... so... if any of you collectors out there are willing to part with this unit that will be cared for and used on a regular basis, I would like to speak with you. Obviously need appropriate connecting cables. Thank you.

I have a very nice T4X. Got it on E-Bay, but it does not transmitt. There is a short somewhere in the unit, but do not have time to T/S. The chassis has bright copper, and there a very few scratches. This is a 9 radio in looks.

You can have for $100 bucks shipped, but if you want the P/S, (add $25 bucks). The shipping is quite high on those.

I have pics if interested....

Hi,

Are you trying to do it with tubes or with transistors?

The common methods with tubes are plate, grid, and screen modulation. If you are running transistors then you either run a linear amp or modulate the supply.

A lot depends on what you define as better. Some of the options depend on what's expensive and what you already have on hand. If you are starting from scratch without a bucket full of parts to get 0.1% THD on the output that's different than if you already have an amp and are trying to add AM to it.

Judging from what you have said I would guess that you are trying for a tube based solution and maybe 5% THD. If plate modulation is out then you are back to screen or grid modulation. The standard approach to each uses transformers. The audio drive level for grid modulation is the lowest, but it also produces fairly poor AM. The audio simply feeds in to the grid bias termination on a normal grounded cathode amp. As the audio signal goes positive you have more plate current and more output. As the audio goes negative the tube cuts off and you have no output. Since the characteristic is non-linear the output is non-linear as well.

One cute way to go might be to do grid modulation and pre-process the audio with a sound card. You might be able to pre-distort the modulation so that once it went through the amplifier the result could be fairly good AM.

Enjoy!

Bob

George,

Thanks for the tips. I'm relatively new to the Yaesu series, so any advice is helpful here.

After I installed the AM filter in place of the CW filter, I rewired the switch according to some instructions I received, which I believe are from the Fox-Tango group. However, I received 2 sets of instructions and both are different, unfortunately. The first time I rewired the switch, I had CW sidetone on all bands and both in receive and transmit. Going by the other instruction sheet, I eliminated the sidetone and everything seemed normal until I went to the 160 position and that's when my problems started. BTW, I will post a drawing of the switch rewiring arrangement if you wish.

I removed the 2 final tubes. I still get normal RF drive and modulation on all bands. However, everything on 160 is ok until I switch to CW. I then get sidetone on receive as soon as I switch the heater on. With the heater off, I don't get sidetone. I get transmit modulation on all mode settings, including CW! No sidetone present during modulation. Time to recheck the switch rewiring!

Source record: 43049

Actually, these rigs were rated based on DC input, and were 275 watts CW, 200 watts AM DC input. All rigs were rated less on phone because of the duty cycle. Carrier output for 200 watts carrier input is around 125-130 watts, but when you modulate, the pep goes higher, of course.

The 6146B tube had higher plate dissipation ratings, and therefore can take the abuse of "old buzzard" extended AM transmisions better than the standard 6146

The power ratings you suggest are far more typical of final amplifiers running in class "B" operation - the Valiant was operating its finals in class "C", and when PROPERLY tuned and operated
as outlined for the 6146's, easily resulted in output - steady UNmodulated carrier - well in excess
of 160 watts with good tubes - and as mentioned, modulation peaks would increase that power rating
CONSIDERABLY! If in doubt, check the ARRL handbook for typical power output ratings on 6146's
operated in class "C" operation...

The MAJOR reason for wildly varying power readings of Valiants again brings us back to a faulty
metering circuit that caused MANY owners to THINK they were properly tuned to maximum output, when
in fact, they were NOT...

Bought the PYE PCR a fortnight ago and it looks fb, very little
damaged although it seems to be some bad paper caps, thought it used
American valves, but mine has only read Philips types

wonder where I could find some data and circuit diagram for it?

Is there a site with a Schematic online?? Preferably a PDF file (they print well)...

I did a search a while back and came up empty.

I've got the one on the inside of the front cover, but that's not too good to use for daily use or marking up!

_-_-bear (WB2GCR)

PS. email me please if you have a solid URL for this!

Source record: 43062

There was a fellow who used to to this. I think his name is Jan (call sign N0ALO) and he has/had a website. He did my panel (both sides) and it turned out great. Problem is, though, he sold his silk screens and his entire BA painting business to another guy. If you come up empty, I can try to find out who the other guy is and if he still is doing the R390A panels. If he does as good a job as the first guy did for mine, you won't be disappointed.

Date: 2002-04-01 02:47:51 UTC
From: Dale Parfitt <parinc@gte.net>
Message-ID: <3CA7C910.1FF41997@gte.net>
Source record: 43064

Nice working 2-NT. Cabinet has been stripped, sanded, primed and painted- looks excellent. Top of chassis has typical corrosion spots- rear apron very good, and underside excellent. All original knobs. Front panel has some small "mole lines" and a small scratch above the power set control. All in all, a very nice transmitter. $90 shipped/ insured CONUS.

Another very good posibility since you mentioned the bias reworking is
that the radio was at one time used on CB and is "cooked"...a lot of
these radios saw cb service at the 100 watt level and payed the price
for it. Check out an EXCELLENT ft-101 site at:

www.qsl.net/nw2m/ft101.html

Best site on the web of info.

Dale, you post here regularly and should know better. Why not follow the convention of FS in the title instead of making people think you have something worthwhile to say about the 2-NT?

They also had weak components in the final amp output loading circuit,
in the form of very small fixed mica capacitors and a custom
multisection mica cap.(these were switched in parallel with the variable
load cap.) These things had a propensity to arc and short, really
screwing up the load and its indications. I had to replace all of them
in mine, with heftier parts.

Hey, folks-
A few days ago, I acquired a German-looking vintage multi-band tube radio, but have yet to find any meaningful information on the net to identify it. From the markings on the back, it's a Quelle Simonetta multiplex stereo super "N". It has blond veneer, measures about 1ft by 2ft, and receives Longwave, AM, SW and FM. Are there any sites that reference the company, manufacture info on this brand, etc? I'm guessing this radio is circa 1965-70. It looks/sounds pretty cool. Thanks for your help.

-Keith

# 3147. Re: Valiant AM Power Output?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-01 14:10:29 UTC
From: mccrk@aol.com
Message-ID: <20020401091029.19401.00001159@mb-fw.aol.com>
Source record: 43074

Actually, that's close, but I think 200 watts out woud be stretching it on AM. My B&W 5100-B, with 2 6146s in the final, runs about 135 watts input on AM (180 watts on cw) and the measured output opn AM runs about 90 watts on most bands, but somewhat less on 10 meters. On CW, with 180 watts input, the output is about 120 watts

ON SSB, when the amplifier is switched to AB (from class C on CW and AM), the loading is again180 watts input. The output during tuneup seems to be about 100 watts. (SSB transmitters average about 20 percent output during normal operation, so during normal ssb, the average output is about 20 watts.)

But this is probably more than you wanted to know.

At any rate, if you check the ARRL handbook or other sources, you will find that class C operation offers the greatest output for each watt of input. In fact, the handbook will give you the percentage efficiency figure for each type of amplifier.

Steve, W3DEF

A simple search on "Quelle Simonetta" immediately produces this web page:

http://www.geocities.com/Paris/6483/

You can then search that page for the same string and you get to:

http://www.geocities.com/Paris/6483/SIMONETT.HTM

Picture and information.

There are other pages that also come up with a simple search, but this was the first one and looked like it might be readable to those who don't understand German.

It's always quick and easy to merely do a search. Sometimes you can help yourself but taking a few seconds to do so.

NICE FIND!

Hello.......Group. Does anyone need anything Picked-up or hand! Delivered.
Anything large and fragile ( everything is handled with TLC.) Specifically
...
( Radios, TV's, recording equip., Speakers, Transmitters...Boatanchors.
Etc. ).
I do this every few months for a growing group of Radio, TV, Recording
musicians, Collectors, etc.
I am leaving in a few days from the East Coast ( NYC. area, New Eng. Western
Pa. )
Then across the country for points Out West. ( San Diego, LA., SF. Las
Vegas ).
Down South also but probably on the return. This time Pacific
N.W...(Seattle, Oregon N. Cal.)
I will have a good amount of room left.
Please contact me as soon as possible to discuss my schedule and your's.
References available.....Thanks.

Mike

A friend of mine has asked me to sell his NRD-515 for him. It is in excellent condition and working order, complete with memory unit, keypad, speaker, all filters and manuals.

This is a very nice radio and rather than put it on Ebay I thought I'd ask if anyone either knows it's value or is interested in buying it.

Many thanks

Simon M5POO

As most who read my posts are already aware, I have blown 6JS6C tubes in my FT-101ee. For replacement, I was going to try to obtain a matched replacement set until I found out the price. A well known firm just quoted GE and NEC prices for a matched pair of 6JS6C at $135 and $160, respectively. I recently purchased this FT-101 for $150, so it doesn't make much sense to spend more than I paid on a new set of tubes. So, I'm wondering about personal experiences converting to 6146B tubes, based on a fairly recent past QST article. Any successes, failures, or any other tips would be much appreciated.

Thanks,
AB

I don't have a suggestion, but I have a comment. I remember when you could
get horizontal sweep tubes like 6LQ6, 6KD6, etc for about five bucks apiece,
and it wasn't all that long ago. Though the quality may not be equivalent
to domestic tubes, there are new [mostly audio] tubes coming out of China
and Russia for reasonable prices, and it really irritates the living heck
out of me to see these money-lusting opportunists driving the prices up on
American NOS just because there are idiots who will pay it while the rest of
us have to suffer without..

I don't know that you're gonna find 6146's any cheaper, cuz just about
twenty years ago you could rob them out an old commercial mobile rig or get
them from almost any local ham who had them laying around in the ham shack,
but from what I understand these are now difficult to find as well. Guys
used to give their old equipment away to people who needed it, but all of
sudden anything which is labeled as "vintage" or "obsolete" is made out of
gold, and people literally *hoard* it for the "collectibility" and make it
unaffordable to those of us who need it for practical or recreational use..

Fortunately, I have a selection of NOS audio and RF tubes to use as
replacements for my own equipment, cuz even though I can afford new tubes
i'd probably let my equipment sit on the shelf and gather dust before
catering to the "collectors" and greedy consumer slavemasters..

A friend of mine has asked me to sell his NRD-515 for him. It is in excellent condition and working order, complete with memory unit, keypad, speaker, all filters and manuals.

This is a very nice radio and rather than put it on Ebay I thought I'd ask if anyone either knows it's value or is interested in buying it.

Many thanks

Simon M5POO

I turned on my radio this morning, April 1, 2002, and the S-meter light came on, and the light behind the analog frequency dial came on. But no digital display and no audio at all comes from the speaker. I turned on the 'heater' switch and let it warm up, but no signs of transmit. Am I looking at a power supply problem? Any suggestions on what to check?

> wondering about personal experiences converting to 6146B tubes

I had the pleasure of dealing with one of them attempts with an old cheap
guy next door who tried to do it to save $16 on tubes on the 70's.
Converting is a nightmare, if you dont know how to do it stay away.
First you have the a serious re-socketing/mounting issue/rewiring.
Then after that you find the ALC, neutralization, bias must be reworked.
In the end you will likely with end up with an RFI spewing oscillator ...its
not worth it
$150 is cheap for a 101EE pay the $135 or find some good pulls

>I recently purchased this FT-101 for $150, so it doesn't make
> much sense to spend more than I paid on a new set of tubes.
Hey.....Thats cheap for a 101EE id pay the $2

# 3161. Question on Hallicrafters R-42 speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-01 21:05:54 UTC
From: k5dh@raytheon.com
Message-ID: <SY3q8.634$Bd4.3903@dfw-service2.ext.raytheon.com>
Source record: 43090

I bought a restorable Halli R-42 speaker at a hamfest last weekend. It's complete and working, but desparately needs the cabinet stripped and repainted. The terminals on the rear panel have been changed to a more modern bakelite four position barrier strip. I'd like to return the connections to their original configuration... but... I don't know what that configuration is! Can someone email me a photo of the rear panel of their un-modified R-42 so I can see what I'm up against?

Thanks and 73,
Dean, K5DH

Any suggestions on what to check?Mine has been doing that for about 2
years.
After 5 minutes I whack it on the top and it comes back to life. Im asuming
it has some dirty switches.
I just havent had time to get into it yet. I also dont have any antennas up
so Im not
too motivated. Paul N9emx.

Lots of very small "molex type" connectors in there. Make sure they are all clean, and making connection. Lots of older rigs do this.

Most likely the low voltage regulator in the PS. Not a real common failure,
but for sure one that'll give you the symptoms stated. Get your meter out,
measure for 12 volts at the supply output, if it's there, look at the 5 volt reg

for the VFO and digital display. The trouble's not far away. Also, check
the jumper plug in the back of the rig, see if it's in all the way or missing.

replace c13 (80 pF 1000v with an 80pf dics ceramic 3 kv working at least or a 100pf 3kv disc ceramic working at least )which is from the anode of the 12by71 to the screen grids of the pa valves. if you dont after 20 year sit shorts and puts a positive voltage on the screen grids. tjis then blows the valaves and if you put brand new valave in t place then the power supply burnsout and or takes out the pa valaves

Check c131 which is 1000pF 1 KV replece with 1000pF 3kv working and is switched o in on 160metes and onsome rigs 80 meters.

These Yaesu mica caps are not good after about 20 years .

I picked up the R.F. amp module from a T-195 some years ago and
was looking at it for possible use with a QRP transmitter.

I've only got the module schematic, am having a bit of trouble
figuring out some of the control circuitry, and wonder if anyone has
gotten one going, standalone and would share notes.

I haven't seen the prior posts on this subject but using a choke you are
limited to
less than 100 % modulation and with a transformer you can go to 100%..
Heising modulation is useable however.

You can reach 100 percent modulation with Heising "IF" you run the RF tube plate voltage "LESS" than plate voltage on the modulator tube. This usually is done by having a droping resistor between the modulator B+ and the RF tube B+. Regards, Sparks W4EAS

==========

Yes, that will indeed increase modulation to 100%. However it achieves it only by wasting power and decreasing the carrier level. This degrades the signal/noise and signal/interference ratios at the receiving end. It also increased distortion of the modulating waveform at the receiver demodulator.

how so?

if you DESIGN it so that you have enough plate voltage for the modulators
while running the RF's at full output, you will have no 'decrease in power
level'.

you might lose a few tens of watts in a dropping resistor to the RF stages,
but hell, man, this TUBES.....its a drop in the bucket compared to what
goes up in heat in the filament circuit!

since you have now DEESIGNED for 100% modulation, that takes care of
'degraded signal/noise and signal/interference at the receiving end'

as far as 'increased distortion of the modulating waveform at the receiver
demodulator', please elaborate, unless you are talking about it as a
consequence of degraded s/n ratio caused by less than 100% modulation

Chas,
Dont know if u r a Sromberg-Carlson expert, but can u give me any info on
the worth of a 1928 mod R 429. It's an AM BC RX. Still works but case glue
dried out, ply came apart. I can restore case but is it worth it?
Thanks
Jack

Yes, Ron. That's the article I was referring to. It can be found on the ARRL website and accessed if you are a member. What I'm looking for here is the results that people have had when following the article's instructions. I really don't want to take on this task without some input from others who have actually performed the mod.

Hello I got more stuff 4 Sale.....

Swan 250C "EXCELLENT" Condition 6 Meter All Mode Transceiver. The Optional Accessories are:
Swan Matching 117-XC Speaker/Power Supply, "RARE" Swan 210 External VFO, Swan NS-1 Noise Silencer, Swan Desk Microphone, Swan VX-2 Vox Unit, Swan SWR-3 SWR Meter.......$600.00

Drake TR-6 " EXCELLENT" Condition 6 Meter All Mode Transceiver. It is very nice, and the Optional Accesories are:
Drake MS-4 External Speaker, Drake AC-4 Power Supply, Drake 9-NB Noise Blanker, FOUR Filter included.... TWO SSB Filter, ONE AM Filter, ONE CW Filter, & Manual..............$1300.00

LARGE HAMMARLUND EXTERNAL SPEAKER, NICE CONDITION.....$99.00

HALLICRAFTERS R-48A EXTERNAL SPEAKER ......$89.00

SMALL HAMMARLUND EXTERNAL SPEAKER.....$75.00

VERY NICE HAMMARLUND " ORANGE EMBLEM" EXTERNAL SPEAKER .....$99.00

HALLICRAFTERS R-46B EXTERNAL SPEAKER.....$89.00

HYGAIN 3806 VHF FM TRANSCEIVER UNTESTED WITH MANUAL..... $20.00

TOKYO HY-POWER HL-30V 30 WATT 2 METER AMPLIFIER.....$30.00

COLLINS SM-1 DESK MICROPHONE, NEEDS A NEW MIC CABLE, IN GOOD CONDITION .....$200.00

COLLINS KWM-1 189A-1 PHONE PATCH.....$50.00

Collins PM-2 power supply ....$195.00

DX Engineering Voice Processor for a Collins 32 Transmitters....$275.00

Collins 270G-2 External Speaker.....$285.00

Yaesu FV-401 External VFO nice condition with connecting cable, and manual .....$59.00

Yaesu SP-401P with manual nice condition .....$35.00

Yaesu Landliner LL-301 phone patch......$29.00

AEA PK-88 TNC with manual .....$35.00

Gonset GSB-201 desk amplifier runs 4 - 811's with manual wired for 110 volts, puts out 500 watts .....$240.00

Multi/Elmac PMR-8 untested .....$26.00

Eico 625 Tube Tester with tube chart.....$50.00

Heath-Kit "THE TWOER" in EXCELLENT a COLLECTOR item for sure with the
AC/DC cable, and original heath-kit microphone $99.00

Heath-Kit HW-22 SSB Transceiver with original Heath-Kit microphone,
mounting bracket and matching Heath-Kit HP-23 power supply.....$125.00

Heath-Kit AM-2 wattmeter.....$20.00

Micro-Match (vintage) # 262 RF Power/VSWR meter...$75.00

Autek Research Message Memory CMOS Keyer MK-1.....$75.00

Palomar Tuner/Tuner PT-340.....$55.00

B & W # 595 6 position antenna switch.....$30.00

KNIGHT C-577 COMPRESSOR.....$15.00

Courier Port-A-Lab 500 wattmeter/VSWR/Modulation/Relative Field Strength
Meter.....$39.00

Maxon (TWO) CS-0510 4 channel handhelds with swivel cases
(can't test do not have a charger) Both for .....$55.00

Yosan HJ-502 "NEW IN THE BOX, NEVER USED"
WITH INSTRUCTIONS, AND ORIGINAL BOX
Power/VSWR/Modulation/ AND a frequency counter.....$85.00

Icom BC-35 quick charger for the BP-7, BP-8...$40.00

ICE NC-580 BATTERY CHARGER FOR ICOM BP-7, & BP-8.....$27.00

Kenwood SMC-25 speaker/microphone for the TR-2500, TR-2600...$20.00

Kenwood YK-88CN 270HZ C.W. filter on 8830.7 KHZ.

This filter will fits these models:
Kenwood TS-130S,130SE,430S,440S,530S,530SP,830S,670S,660,and
the R-5000. .....$60.00 shipped in the U.S.

Kenwood YK-88C 500HZ CW filter on 8830.7 KHZ.
This filter will fits the following models:
TS-120S,130S,130SE,430S,440S,530S,530SP,670S,180S,830S,660,
& R-5000..... $60.00 shipped in the US.

Kenwood TU-4C (new in the box) is the Tone Encoder for the Kenwood
TW-4000A 144/440 MHZ dual band mobile radio .....$45.00
shipped in the U.S.

KENWOOD CK-18 WARC BAND COIL PARTS KIT FOR THE TS-180S (New In
The Box),(UNUSED) This will add 12, 17, 30 meters to your Kenwood
TS-180S, instruction manual included.....$65.00 shipped in the
U.S. ONLY

Kenwood IC-10 (set of two chips) these are required for computer
control when using a Kenwood TS-440S, and R-5000
.....$49.00 shipped in the U.S.

Source record: 42968

I recently bought a 101zd at an estate sale but the a.c. power cord was nowhere to be found..I thought I could just hardwire an a.c. cord to the existing plug, just had to identify which 2 were for a.c. Obviously the tracing was much harder..1 of the center pins is definitely a.c. as it goes to the a.c. fuse; it is white/black and on one of the 2 center pins..logic tells me that the adjoining white/black is also a.c...BUT I really don't want to smoke this rig..SO..is there any KIND ham out there that has a 101ZD what could unplug his a.c. cord and do a fast trace which goes to which pin?..It has a 6 pin connector (I understand some had a conventional 3 pin plug; this one does not); the pins are arranged 3 rowes of 2, all set vertical except top right pin which is horizontal...I believe the pin setup is DIFFERENT for the 101E series..I have searched the web over for this info and really don't want to buy a manual and schematic for such a simple thing..This looks like a really nice rig; I had a 101EE years ago and it was great on cw with the optional filter..
TNX in advance!
Tony

Part of the reason that tube prices went up is due to fewer being made and
sold.
I saw this while working in my brothers TV repair shop.
6146's are much lower priced compared to those 6js6c's, at least on the web
site I had located by doing a search..
And, IMO, are a bit more durable.
Though I never used them to replace the 6js6c's...
Need to change the socket for that.

Yes, I know. I wish there was something that could be done but I guess it is the rarity of the tube that drives the price way up. I notice that almost all sweep tubes these days are high priced. Also, I guess they're not really meant for RF amplifier service and better suited for 70's televisions, which would also be a contributing factor. One often wonders why reputible manufacturers would have used them anyway as RF amp tubes. Cheaper at the time I suppose.

Just a few years ago, I probably had a dozen 6JS6's. Not thinking I would ever be going back to tube equipment, I practically gave away close to 500 tubes. Now, obviously, I'm seriously regretting my mistake!

I've always liked to troubleshoot and repair my own equipment. With tube equipment, I am quite the novice but I know this will improve over time. Earlier solid state rigs were challenging to repair, but I almost always managed to get them up and running again, at least 80 percent of the time. Today's modern rigs are beyond my capabilities to repair, especially with all the surface mount components involved. Therefore, I tend to avoid them but the door is then opened to earlier rigs. However, obtaining parts gets more and more difficult as the equipment ages. This Yaesu tube situation is a good example. It's unfortunate for those like me who like to keep older equipment functional.

BTW, I'd like to thank those people who provided several alternatives to obtaining the 6JS6C's at more reasonable prices. I intend to look into these further.

If I decide to convert to the 6146's, I'll post the results since there seems to be little feedback info. regarding this subject.

Thanks again and please continue to share opinions and experiences with the 6146 conversion.

Ah well, if anyone wants to waste time re-designing an unnecessarily complicated and therefore less reliable transmitter, just to waste power and achieve nothing, then let them get on with it.

Why not design it right in the first place?

Some folks just "Like" to operate AM on the AM portion of the bands. Some folks did NOT save the modulation "Iron" to do plate modulation...Therefore to have "Fun" and experiment, Some folks use OLD methods. I don't think anyone is going to "Re-invent" the wheel. Have fun in the Ham Radio "Service" 73 Sparks W4EAS

# 3197. HQ-140X problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-02 13:52:46 UTC
From: Bill Ogden <ogden@us.ibm.com>
Message-ID: <3CA9B7AE.BB82B08B@us.ibm.com>
Source record: 42975

I recently bought an HQ-140X. It is in excellent condition and works fairly well. Two minor problems that I would appreciate advice on:

1. With very strong signals (and with the receiver out of the cabinet), I can hear a mechanical "frying" noise that seems to be related to the signal strength. It is not loud; I cannot hear it when the receiver is in the cabinet. It seems to originate somewhere near the crystal filter area. It does not appear to hurt anything, but I am curious about it. Also, I would like to try to repair it if the problem grows.

2. Switch operations produce loud clicks when operated: band switch, standby/receive switch, limiter switch (to a lesser extent). Any suggestions?

The unit has a slight hum, but I assume this can be fixed by replacing the filter capacitor. It is a 4-way "can" that may be a little difficult to duplicate. (Gives me something to look for at hamfests.)

Thanks,

Bill Ogden

Source record: 42978

CENTRALAB CERAMIC ROTARY SWITCH -This is a NEW/UNUSED Centralab ceramic rotary switch. Box has faded "2005" on the label, but not sure the box matches the switch. The switch appears to be a 2-pole-12-throw rotary suitable for audio or low power RF applications. The stops on the switch mechanism currently block it to 2-throw positions, but by changing the tabs it appears that all 12 switch positions can be enabled. Not sure if contacts are copper or silver plate. $18, I ship. Pay by money order or cashiers check. Email to dt0124@comcast.net

I realise this, but such has not always been the case. People in general
weren't so greedy and money hungry until just a few decades ago, and were
more willing to give things away to those in need. It's not so much that
people nowadays want money for their goods, but rather the outrageous profit
margins that perpetually rise because of "lack of availability" and the lust
for money on the part of those who hold us in virtual consumer slavery..

Example: I *used* to collect coins as a *hobby*. Why is it that when a new
commemorative coin such as the Susan B. Anthony or Eisenhower dollar, the
Kennedy half dollar or the new state quarters are issued, the yuppie idiots
immediately run down to the banks and buy hundreds or thousands of them to
stick up in a closet and sit for decades, and save *every* single one that
they get in change, thus limiting the legitimate collectors of the pleasure
of finding and/or affording them for their hobbies? The same can be held
true for vintage ham radio equipment, parts and accessories..

I'm from the old school when people put more value on kindness, reason and
human compassion than riches, and i'm not at all impressed by what I see
nowadays. There are entirely too many selfish people in the world today..

Source record: 42981

I've recapped my SP-600 JX-17 and it truly sounds great! Having done that I'm down to picking nits with it before it goes back to the operating position. This is what I noticed while listening to near hi fidelity music on the broadcast band. The RF-meter shows some downward deflection on voice or music peaks on AM. I took a look at the schematic and it appears that the current source for the RF-meter is actually the output of the detector diode. I'll assume that they did this so as not to load down the AGC line with the meter movement and that what I am seeing is actually residual rectified audio and not actually present on the AGC line. Can someone tell me I'm right?

Thanks

Tony WA6LZH

Source record: 42983

Hi All,
I have a National NC183 general coverage receiver for sale. This set was produced by the National Co. in Malden Mass. between 1947-1952 and was one of the better receivers that they produced. It has 16 tubes and covers from .54-31 mHz, then from 48-56 mHz in 5 bands. There are bandspreads for the 6, 10, 20, 40 and 80 meter ham bands. The set works well on all bands and the S meter works well too. The cabinet has some scratches on the side, but is overall in very good condition for its age. The filter has been professionally replaced and the choke is a replacement too. Other than that, the set appears to be all original. The set comes with a copy of an original National manual. The speaker is NOT included in this offering. I have photos for interested buyers to view. The buyer will pay shipping on this item, which will be substantial as this is a fairly heavy National. Please email me directly with any questions and I will answer them to the best of my ability. I am asking $200.00 for the set, plus shipping from the 07860 zip code.
rgds,
Mark S.

It's called free market capitalism, where the demand regulates supply. If there are a few items many people want, prices will go up. It's a beautiful concept when you think about it. So simple and natural.

> Example: I *used* to collect coins as a *hobby*. Why is it that when a new
> commemorative coin such as the Susan B. Anthony or Eisenhower dollar, the

Because they know that years later collector idiots will pay good money for shiny quarters no one bothered to save when they were widely available?

> The same can be held
> true for vintage ham radio equipment, parts and accessories..

The solution is simple: we have to establish a Central Committee which will nationalize all the vintage ham radio equipment and which will then redistribute it according to the needs of the people.

> I'm from the old school when people put more value on kindness, reason and
> human compassion than riches, and i'm not at all impressed by what I see

Bullshit. This is nothing but geezers' cry about the good old times. It's never as it used to be - it was always better when we were young, wasn't it? Even when there was slavery, tyranny, plague, no elections, no electricity, no food, no fire...

Got get some DeoxIt from your local Electronics Supply store. Clean
all the switch contacts, pots etc.

Use the DeoxIt on the tube sockets also. That stuff will normally
wear off all tube markings, so I use bad tubes for the cleaning process;
they'll clean the tube sockets, but you still need to address the tube
leads. If they're dirty etc, use some steel wool to clean them.

Probably more than a little. AES is now producing new FP style cans,
but da ain't cheap. I've gone to just putting modern individual
equivalents
under the chassis and disconnect the multi-stage can caps. A lot
cheaper that way.

I recently bought a Hammarlund HQ-129x. There is an unoccupied Fahnestock clip on top of the enclosure to the left front of the chassis just behind the crystal switch. Should it be doing something?

Thanks.

Larry

This a very enjoyable radio. It works well and has excellent audio and good output on all five bands. The receiver is very sensitive. The front panel an 8.5 of 10. The case has been repainted and looks good, although it has a slightly different sheen from the bottom plate (flat black vs.satin black). The chassis has moderate appearance with no corrosion but some stains. Comes with the AC-4 power supply and MS-4 speaker. $295 plus shipping from Del Mar, CA. (The TR-4C should be shipped in a separate box from the AC-4/MS-4). I do not have a digital camera to take pictures.

Hello,
I found some more Yaesu FT-101 series parts in my bunch of radio
parts.I have these part numbers and all parts are used,

PB-1180
PB-1315A
PB-1166
PB-1083A
PB-1092
PB-1187A
PB-1188b
These are used and have not been tested.So with that I am selling them
as is and
no warranty is implied or expressed.I will sell them for $25.00 U.S.
Postal Money Order only.This price include shipping.Also if any
questions or you want to buy these items please E-mail me at

kc8fwd@hotmail.com

Thanks for looking and 73's de KC8FWD Mike

Look at the knobs on the front panel. Several (all ?) of them are fastened with Allen screws -- set screws -- buried in the knob. The HQ-129X came with an Allen wrench that fit these set screws and the wrench was clipped into that clip. Find an Allen wrench that fits the set screws and stick it into the clip -- just like the original.

I liked my old HQ-129X -- should have held onto it.

Many older sets used a fahnstock clip to hold an Allen or bristol wrench,or
maybe a tuning wan ..could be that. I assume the clip is grounded. good luck

mike, You may not need to neautrilize the finals, first get the power output up to par and see if it really needs neutralizing..Did the power gradually die down have a tube short or something? First thing to look for in the Kenwood 500 and 800 series is the SG switch on back panel left side , it is marked SG on-off when you move the rig around sometimes you will turn off the screen voltage and lose output, no plate current no output..Happens all the time.. good luck Harold W4PQW

You can download a copy of the manual for a TS-520S at
http://www.n1km.com/db/cn.nsf/html/n1km-welcome - procedures and specs for
neutralization are the same as in to my TS-520 manual.

==========

That's right Tony, the audio feedthrough you see on the S-meter is
normal for the SP-600. Hammarlund got the S-meter right on the
HQ-170/180. My HQ-180 has the best S-meter action of any receiver in
my shack. The SP-600 S-meter action is rather sorry for an otherwise
excellent receiver.

Best Regards,

Ed

Well, to be honest, most tubes are easy to get. Pretty much all the standard audio tubes are in current production, compactrons and most other TV tubes are a glut on the market, and most standard radio tubes have supply greatly exceeding demand.

The problem are some of the more obscure tubes, and sweep tubes.

And sweep tubes are a special case, and the worst possible case, and they are the problem with the FT-101. Because they were dirt cheap, designers used them (and lots of folks converted commercial gear to use them). TV set tube production was very high and there were plenty of sweep tubes out there.

Then tube TV sets stopped being made, but there were still huge numbers of sweep tubes in the warehouses.

The problem came with appliance operators who didn't know how to neutralize their finals, people who ran the finals at outrageously high levels, and the illegal CB linear crowd who often ran huge numbers of badly matched parallel tubes.

And these people collectively destroyed most of the stock of sweep tubes out there, and now they sell for outrageous amounts of money. THAT is the problem more than anything else. Tubes that should have lasted for years of operation that only lasted for hours.

Looking for original user/service manual, RF cables (or just
connectors) and service cables for Rohde & Schwarz receiver EK07. I
have a version EK-07D with German tubes, which is slightly different
from other EK07 receivers developed for US market.
Please reply directly to Vlad at: kb9olm@yahoo.com

I have two of these for sale. Both work the same, with great sensitivity
and stability. Both are dent and corrosion free and look great, almost
as new. One I consider excellent and the other very good due to several
VERY light scratches on the front panel. These scratches do not go to the
metal and likely could be buffed out and are not very noticeable. Other than
that, it is in the same condition as the excellent one that looks like new.
Pictures are available upon request. $275 for the very good one and $295 for
the
excellent one. I will double box these for shipping and buyer pays only
actual
shipping cost
73,
Chuck...K1KW

> >6L6's. Can it safely handle these or should I get some NOS 6V6GT's?

Remember there are at least three kinds of 6L6s. the small glass ones run
way less power than the large glass ones. I have forgotten where the metal
ones fit in there.

AT any rate, like others in here I'd go back to the 6V6.

BTW, my first transmitter was a pair of the large glass 6L6s built onto the
corner of an old TV chassis. 6AG7 Oscillator with 6L6 finals, but I've
forgotten the driver. The receiver was an S-40B with the first RF stage
changed to a Doorknob tube and it used a Heath Q Multiplier.

Eventually replaced the S4 with an RME 6900. I haven't seen one of those
since I had mine.

You'll have much better luck looking for a 500-600 ohm transformer to
match a 8 ohm speaker.
Hopefully somebody will jump in here, but I think you can rig up a Radio
Shack filament xfmr or something that will approximate this.

Why not get a nice 8 Ohm speaker and simply use an audio output transformer to match the radio's 500 Ohm output impedence to it?

I used to remove such transformers from old radios all the time years ago. You should be able to find such a thing at a hamfest without trying too hard and build it into the cabinet of the speaker you choose to use.

Just a thought.

> Most don't push them that hard. Two 6l6's are good for 35-40 watts

My first transmitter (pair of 6L6s) ran 90 in so that's pretty close.
Course it was class C.

I get 200 watts out (music power) with 6 6L6s in a Fender dual super twinn
reverb.
For those who can't appreciate 200 watts of sound...Pop a low E on the
Guitar and it will snap your pants leg right around your leg as if you were
standing in the wind. You practice at that level with head phones on, but
the vibration at close range will end up nausiating you.

> blues deluxe with twin 6l6's for 40 watts and the sucker is so loud

> 6v6's. MK

Interested in a dual super twin reverb that needs a little work?...(Clean
and looks nearly new)Guessing some caps and there is one whale of a hummmmmm
in there. Otherwise it works (amplifies) and all the functions work,
including the built in delay line.
I think that's $300 worth of 6L6s at todays prices. <:-))
Any more I just use a little practice amp although it just aint the same.

It's real expensive.
There is a dealer who sells slugs for about $60 new in Detroit, or did last
summer when I purchased a couple. I don't remember the name, but I have the
receipt around here some where.

Believe it or not, there are still places left in this world where people leave their front doors unlocked, even when no one is at home. I used to work in one of these areas, which is a small semi-rural community where everyone knows everyone and trust runs high among the locals. When people made appointments for me to come over to their houses and they couldn't be home, they would just say "the door is unlocked. He knows where and what needs to be done. There's a beer/soda pop in the refrigerator. Just tell him not to let the dog/cat out and pull the door shut when he leaves..

I knew a lot of the people on a first name basis, the dog in the backyard, seen people's hidden contraband, marijuana plants, etc, and virtually had free run of the whole doggoned area, pasturage, wooded areas, etc without having to worry about getting shot at for wandering into the wrong place..

Because my boss was a jerk, I left that job for another one "over the hill" in "civilisation" which offered a very substantial increase in pay, but I still miss the people and the laid back and virtually stress free work atmosphere which I had held onto for five years because in many ways it was worth more to me than all the money in the world..

Maybe that exists somewhere now, but the current risk is that the same openness will have you sitting behind bars when some doper whines to the police that you stole his dope. Did I say risk? That was a risk 20 years ago...its almost a norm these days that a serviceman left in the house has stolen something.
I hitchhiked the whole country in those days...I wouldn't dare hit a highway now. Things have indeed changed and thats a sad comment on our society. Its a great memory, tho.

-Bill

>

So what's that -- 36 6L6s? A ways to go to get to the number claimed for the Philadelphia Experiment:

"The final version some 3000 '6L6' tubes were used to drive the field coils of the two generators, and that was an accurate rendition, by the way, perhaps not to the exact position, but actually in the sense that there were a large number of tubes, about 3000 by count."

The full gobbledegook account is here:

http://www.sydweedon.com/resources/Bielek.htm

"Then there was a blue flash and the ship disappeared totally"

Let's be careful with these things, OK?

Hello to the list,
I have come across an old (very old) battery operated receiver. Similar to Atwater Kent, with three tuning dials, volume control, and filament control. There is also an off/on switch. The tubes are all 201, type A 4 pin. The name, engraved on front panel is either: "Voldistone, or Doldistone". With the style of print, it is very difficult to decipher the lettering. Any help in identifying this receiver will be greatly appreciated.
Thanks

That's probably a model name rather than a manufacturer. I just checked my listing of 1920s radios and can't find anything like that. I have the 3 volume set of Alan Douglas' books on Radio Manufacturers of the 1920s, and if you can come up with a manufacturer's name, I can give you details. There might be a paper label on the bottom, back or inside of the cabinet that lists the manufacturer.

Gee, what happened? I thought you were from the "old school that put more value on kindness". Turns out you are just another baby-boomer, the generation that is the epitome of self-interest, greed and reckless spending in both private lives and in the government affairs. You people lived through the best of times, racked up a cozy lifestyle, put the future generations in enormous debt, and now dish out moral lectures while continuing to bankrupt Social Security and Medicare.

For Sale Homebrew 2 tube 811A amp. 80/40/20/15 meters puts out at least 400 watts or more on all bands. Runs off 110vac. Size is 14" wide, 11" deep, and 9.5" high. Has plate current meter, Fil on/off, HV on/off. with HV off it bypasses the amp. For QRP'ers it will put about 50+ watts with 5 watts drive. Is not built for 10 meters, 80-15 ONLY. Weighs 40 lbs, very well built. Prefer pickup if possible, may be able to ship or meet an hour or so away. $195
Thanks Tim

In the Morgan E. McMahons' "Radio Collectors Guide" there is a listing of a Voisometer Manufacturing Co. That is about as close a manufacturer as I can find. The only information I have on it is : built in 1923 and the 2 models were sold for $55.00 and $75.00, no other information on the sets.

Good luck!
Joe

A 25 volt line to voice coil transformer will match the output of your SX-42 to any 8 ohm speaker very nicely. Radio Shack has them on their shelf. If you can't locate any let me know, I work for a sound contractor, we have a good supply of them in stock.

<< The unit has a slight hum, but I assume this can be fixed by replacing the filter capacitor. It is a 4-way "can" that may be a little difficult to duplicate. (Gives me something to look for at hamfests.) >>

Bill, an option is to leave the 4-way "can" in place and disconnect its leads from the circuit. Solder in individual (new) axial-style electrolytic caps below the chassis. Unless you're going for musuem-quality, this method doesn't really detract from the radio's appearance. - Joe, W1GFH

I'm also from the "old school" that when someone doesn't know when to shut
their smartassed mouth and ends up getting it shut for them, that they learn
a valuable lesson and chalk it up to experience, but it appears that you
come from the new breed of jerkoff punk that continues to mouth off and
deliberately provoke others into an argument so that they can call the cops
and try to have the guy arrested for knocking the living shit out of you..

I live in the San Francisco Bay Area. Zip me an e-mail and let me know when
your in the area, cuz i'd love to eyeball with you. I get up to W7 land
occasionally as well if you're in the Oregon/Washington area, but I wouldn't
trust you as far as I could throw you cuz trash like you have no integrity.

Not to mention that you don't know what in the hell you're talking about..

Please don't bother to respond, cuz I won't..

Those little roll up ear plugs are only good when standing in front of all
those dbs if you are already half deaf.
<LOL>

Some years back we lived out in the country.
I was trying out a new guitar as the previous one had been stole along with
a bunch of stuff when some one broke into our house. They didn't take the
amp as they brobably couldn't easily cary it away, even if it does have
wheels. <snicker>

At any rate, I was whalin' on some heavy blues with a few runs with the
thing (the super twin reverb) in overdrive while wearing a headset (full ear
muffs). I took a break and thought I heard the door bell. It was a
financial advisor, or some such. I told her I hoped she hadn't been there
long as I had been practicing...She said she already knew that<:-))
Aparently she could hear me while she was coming up the highway even before
she got to the driveway.

When the company would send me on trips, usually for computer training, I'd
take my two meter rig along and a cheap electric guitar (Peavy T-60). Then,
instead of hitting the bars in the off hours, I'd hit up all the music
stores I could find. Pick a place to lite, a nice guitar to try out, and
start running a few cord progressions. It usually wouldn't be long and some
one else would set down and we'd start trading 8s...Eventually we'd end up
with a group just playing imprompt...in a given key, unless some would call
out a change. Had a ball.

I hit one big store just north Of Phili...they had a beautiful Yahaha semi
hollowbody with pearl inlays...More than I could afford...I had sat down and
was running some blues when the owner came over...I told him I'd tone it
down...He said don't worry! and really cranked the amp...And all I was doing

were a few blues cord progressions with a couple of runs. What a hoot!
>
You can get a lot of power out of those 6L6s, whether RF, or music.
As I mentioned earlier my first transmitter would run an easy 90 watts in
with a pair of them.
Unforunately, back in those days we were rock bound.

I should roll that supper twin out to the shop, along with all the other old
tube stuff and make an effort to trouble shoot it. It's only humm.
Probably something simple, but man, are those 6L6s (the big glass ones)
expensive.

BTW, I think Ted lives about 40 miles to the SE of me.
No, I've never met him except in passing and don't know him.

Any body out there have a good KW...HT33 series, or 6-meter they'd like to
trade for a super twin reverb?

I'll be at the swap on the 27th.

I hear where you're coming from, and even though the area is full of
potheads, this mentality is not at all prevalent. I worked there for five
years and *never* even one time had a client call my honesty into question..

And I hate to disagree with you, but in the twenty four years that i've
worked in this type of capacity in the San Francisco Bay Area and elsewhere,
I can't count the times on one hand that any coworkers have been accused of
stealing from a client..

> I hitchhiked the whole country in those days...I wouldn't dare hit a

The only time that I would pick up a hitchhiker would be if he was carrying
a gas can, and even then I would exercise extreme caution. If I use bad
judgement and get a knife or gun pulled on me, then we'll see how long it
takes him to hand it over or throw it out the window after I floor the gas
pedal and threaten to run into a concrete overpass abutment. If i'm gonna
die anyway i've got absolutely nothing to lose, but he does..

The baby boomers aren't old enough for SS.
I come from the previous generation and just applied for SS and won't
receive it for some months yet. They had it the best of basically any
generation I've seen and they thought they had it the worst.

We have about another 8 years or so that they can still keep pumping money
into the stock market until the numbers drop significantly.

After them the next generation was the "X" generation, or lost generation, I
believe.
That was when we had the gas shortages (or was it still another generation
later...once you retire, you seem to lose track of time) we started to

recycle, move to cars that lasted and got good milage. Now we have huge SUVs and Trucks...actually they are selling more of those than cars and have been for at least three years.

The baby boomers were still in the time of "planned obsolescence". I had a Ford Mustang that actually rusted out by the time it was 6 months old. Pretty car...built like crap. The Ford company offered to stand behind it and pay half the cost of the repair...I could get it done for less than that at most autobody shops. Then the auto industry and unions couldn't understand why people started buying foreign.
>
I actually stayed with US cars until last fall when one of those imortal teenagers pulled out in front of my Transam with his invinciple SUV. I drove right through his door...The TAs wheels were big enough to put me over his frame. The only thing that saved his life was the massive door post on that GMC Jimmie. Shortened the TA up by about a foot and a half. Put the right front tire back into the firewall and there was no space left under the dash to get at the wiring because it drove the fire wall back so far. I wasn't even sore the next day. BTW, I only had time to leave about 12-15 feet of skid marks. I was punchy (and deaf) from the air bags for about half an hour.

The control head for the 2-meter rig was mounted on the dash. I stopped so quick, it layed down flat...Bent the metal right down to the plastic.

BTW, I had an FT101B and "thought" it had 6146s in it. Damn near got electrocuted off that rig due to a poor soldering job from the factory..

Interesting. I had a 1998 Mustang for over three years + 60k miles and didn't have a single problem with it. The best car I ever had. If my company didn't insist on giving me a company car, I never would have sold it...

Source record: 42923

Don't expect miracles..... I had a similar Hum prublem in a HQ-129X I recently restored. I had the filter capacitor rebuilt... and still hum. I then replaced all (arnd 30 if I remember right) the paper capacitors with new orange drops.... left the mica ones as they were all good. Still hum.....

In my case I found the power transformer and audio transformer are pretty close physically to each other. I unbolted the audio transformer and found I got a null in the hum if I turned it a bit..... still hum but much less noticable. So.... replaced all caps, rebuilt filter.... doesn't necessarily mean you'll be rid of the hum <grin>. It's back on the bench later this spring..... I have heard other 129X's with no perceptable hum so I must be able to find a fix.... oh yeah..... all tubes tested good by tube tester and substitution.

My Valiant when loaded to between 360 and 380 ma show 150w AM mode carrier
power out on my Nye Viking RF Power Monitor. I solid stated my HV supply
but then added series resistance to drop the HV back down a bit; so my
Valiant has been changed. The finals are now 6146. I recently removed
6146B (W) types because I thought I might be having some parasitic problems
smoking the series parallel 150 pf mica cap network on the input side eof
the Pi network.
You could load it higher but at risk of releasing some smoke.

The 500 ohm output is pretty much the same thing as a 70.7 volt output at 10 watts. Radio Shack and Parts Express both sell good 70.7 V to 8 or 4 ohm output transformers. A higher fidelity (and more expensive) 500 ohm to 8 ohm transformer is available from Antique Electronics Supply. I've used all three at different times with my SX-62.

<< A higher fidelity (and more expensive) 500 ohm to 8 ohm transformer is available from Antique Electronics Supply. I've used all three at different times with my SX-62. >>

Brings up a good question.

I run the Radio Shack line voltage transformer from the 500 ohm output of my SX-28 to an 8 ohm speaker system.

I also have a Hammarlund Super Pro (600 ohm output) that I run with the Hammond 119DA transformer (600:8 ohms) into the same 8 ohm speaker system.

I notice little difference in the fidelity. Should the Hammond outperform the RS xfmr?

I don't *KNOW* - some guys here do, but they haven't
replied. Here's what I do: 5 minutes at 10 volts, 1/2 hour at
20 volts, 1 hour each at 30, 50, 60 volts, 3 hours at 90,
1 hour at 110. I monitor the current carefully for a couple
of minutes at the beginning of each increment. If I recall
correctly, I think there are some guys here who stretch
the process over days. ***BUT*** you have to be
careful NOT to do this slow startup with anything with
a solid state oscillator. You could possibly arrive at a
condition where a transistor turns on and stays on at a
lowered voltage, cooking the transistor or its load with
a 100% duty cycle, even though it is at a lowered power.
So its gotta be a real boat anchor. Now some of the
solid state gear is strating to be considered as a boat
anchor by some people.

If it uses a tube rectifier, remember it may not start conducting till
you're over 60-70 volts on the input. So there's not much point in
spending hours below that voltage unless you're just wanting to warm up
the xfmr.

Thanks for that great link Frank
I been up to that area and kicked out many times by Park Rangers and wondered for years !
I did read Al Bielek's interesting "account" http://www.sydweedon.com/resources/Bielek.htm regarding a so called "Phoenix Project at Montauk"
The Boogieman, Voodoo, Star Trek are best kept for books and movies, Now my findings:

That was nothing more than a Sperry built AN/FPS-35 part of the 773rd Aircraft Control & Warning (AC&W) Squadron.
http://www.fortunecity.com/marina/seafarer/665/p_tour-03.jpg
The AN/FPS-35 radar is the nation's last intact example of a large frequency diversity radar.
It is a valuable technological and historical artifact of national significance.
For this reason the remaining rusting Montauk Air Force Station's been acquired by New York State as a park.

This conforms this:
Montauk Radar Preservation Group historian Don Bender has built a websight regarding this project
They are now allowed inside the building
http://www.fortunecity.com/marina/seafarer/665/tour-00.html

Note the size of the feedhorn and transmission line ....to small

this rig was designed to run 200 watts INPUT. At 75% efficiency for class C
you will get around 150 watts out on 80 and 40 it will do around 130 on 20
and 10. The modulators are pushing their limit at any thing more than 200
input and loading any heaver risk blowing the modulation Xformer.
This rig kicked every things butt in the contest in the early 60s

Here's what I've figured out after 20 some odd years of screwing with
old radio junk:
Assuming you've made the basic resistance checks on the power xfmr,
determined it is properly fused and the power cord is safe for household
electricity...
just plug the goddamned thing in. If the filter caps are open, it'll
hum, if they're shorted, the primary fuse will open. Why piss away half
the day to learn what only takes a few minutes to find out? If any
components are borderline, they will eventually fail regardless of how
soft you apply AC. Give the filaments a break. It's just a boatanchor
boys, not foreplay.

Message-ID: <3cae68d9$0$35572$1dc6e903@news.corecomm.net>
Source record: 42937

I have an extremely clean Tektronix 561A hybrid Scope with the Dual
3A6 dual trace vertical plug in, a type 60 single trace plug in, and the
3B1 time base with delayed sweep. I also have the manuals and even a
the matching vinyl cover. I paid $325 for the 3A6 alone back some time
ago. It is all working and calibrated.
I am looking to trade for something like a Johnson Ranger, Valiant,
or something Collins. I will also sell outright for $200 obo. This
will make someone a great scope for the boatanchor bench. Would like to
trade locally or drive a reasonable distance since it is big and would
cost a bunch to box and ship. I will also be going to Dayton.

# 3309. New Hallicrafters SX-88 Bezels

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-06 03:09:17 UTC
From: gharmon@idworld.net
Message-ID: <3cae66c7.256886942@news.idworld.net>
Source record: 42936

Good evening all. Looks like the SX-88 bezel project is on track and on schedule. Initial price estimates are listed below and include priority shipping to U.S. addresses.

30+ units = $190 each
20-29 units = $210 each
10-19 units = $285 each
6-9 units = $490 each

As mentioned before the final product will be black anodized. The fabricator will create one unit as a sample and provide it to verify fitting to the panel, glass fitting and all the other points to be considered while determining if the model is acceptable from all sides and fits. The fabricator said there will be a tiny radius at the inside point of the bezel openings. When I get pictures of the sample unit I will provide digital photos. I'll post them on a web site for all to review.

If you have any additional questions please let me know. I will be glad to add your name to the list of interested parties.

73, gary

# 3313. Yaesu FT-101 and Fox-Tango mods

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-06 04:01:07 UTC
From: AB Brown <abbrown@nospammail.com>
Message-ID: <a8luko$48r$1@slb0.atl.mindspring.net>
Source record: 42942
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Just received the Fox-Tango Newletters library. I am interested in performing several of the mods listed, starting with the doubly balanced mixer in the receiver, using the MC1496. Although no circuit board patterns are disclosed in ANY of the volumes, I believe I have enough information from the schematics and parts layouts to construct the mixer unit. Does anyone have experience in fabricating their own mixer boards and could provide suggestions? How much difference does this mod make in the receiver, which seems poor on 10/15 meters at present? Several experimenters mention IMD problems due to the IC used. Any better substitutions?

Any other mod suggestions would be appreciated.

Thanks,
AB

yes, it was some silly notes about improving FT-101 using MC1496P and
this was the reason for buying FT101B, but it later turned out that
MC1496P has an IP3 of -20dBm which would not be an improvement at all

Have borrowed several FT-Newsletters from DK3UZ to look at possible
improvements for FT-7 and FT-902, but didn't find anything useful,
most of the mods were more based on feeling than based on practical
experience

FS: Boonton Calibrators.

Great for use with your Boatanchor receivers to calibrate them
perfectly every time and know precisely where you are.

I have two for sale as follows:

Boonton Crystal Calibrator Model 111
Dimensions 6" wide, 5" deep and 8" tall.
Markers at: 250 kHz, 1 MHz, 10 MHz. Has provision for switchable
external modulation & many other features. First class instrument.
115V AC . Excellent condition
Will sell for $25.00 plus shipping

Boonton Crystal Calibrator Model 111-B
Dimensions 6" wide, 5" deep and 8" tall.
Markers at: 100 kHz, 1 MHz, 10 MHz. Has provision for switchable
external modulation & many other features. First class instrument.
115V AC . Excellent condition
Will sell for $25.00 plus shipping

Pictures available via E-mail request.

ALSO:

Turner 758 Desk microphone - brand new & in the original box.
150 ohms low impedance dynamic type with locking PTT bar.
Flat black and silver finish. Alloy case - omnidirectional.
Output -81 dB. Comes with 20 foot cable.
Picture available on request.

Will sell for $39.00 plus shipping

There's not alot of difference with broadcast quality AM. I think the SX-62, and probably the SX-28 are capable of better sound than is usually broadcast. The most noticable difference on the SX-62 is on FM with a good speaker. The RS 70.7V PA transformer isn't bad, and is certainly the bigger bang for the buck.

Al Bielek is, or was, an imaginative fellow. The memory wipe he claims the
military performed was only partially successful and all sorts of things popped
into his head. I suppose he'd say that a technology which could instantly move
a destroyer from Philadelphia to Newport News and back could, once perfected,

easily move people and equipment through tons of soil and concrete to an underground city under an "abandoned" military base. If nobody on the surface knows what's going deep underground, well that's how it's supposed to be, right? After all, we've gone far beyond the 6L6 and even the 2N3055.

I did like the virtual tour of the Montauk base. Here's a slightly different one:

http://triggur.org/silo/

Gotta wonder if it might be a government-alien deep cover story, though.

Yes, I think I agree here. In fact, upon re-reviewing the Newsletters, someone mentioned that the original MOSFET's were actually better than the 1496 in most cases. Good point! However, not to sound like I'm contradicting myself, I have an unused 1496 sitting here along with parts boxes with all the parts needed to construct the mixer. I think I'll try it anyhow and see what happens. The receive is weak on the higher bands, especially 10 meters, and the bleed from close stations is terrible. I need to try something.

I'm not sure what opinion I have of the Newsletters at this point. Seems like a lot of experiments were tried and failed but others were successful. And at least some of the content does seem theoretical rather than "practical".

Good idea, Jim. I usually use a Variac, but don't spend more than a few
minutes bringing it up to voltage. If there are good resistance checks
from the electrolytics, not a great deal is going to happen. If you see
red plates and smoke early on, then you can back off and troubleshoot.

Hi ALL

I have 5 articles written by g3LLL in Ham Radio today (a Uk magazine now out of print).
These articles are well written and give much info on maintaining and repairing the FT101 range.

I think he had a double balanced mixer mod which proved succesful, and he alo designed an rf clipper for the early models without speech processing.

I have heard of the ft news group and would like to know how to get information to obtain the newsletters library.

I have a copy of the ft101 series service manual on a cd.

I also own 3 FT101E's. 1 works 100% and is in mint condx, the second one is 90% ready, the third is 80 % ready I bought the latter 2 a for spaers but unfortunately they appear to be fixable .

I also own a sommerkamp ft277B (ft101B again bought for spares) which is 60 % restored to working order but I need a vfo knob to make it complete. I am in need of 6js6c valves and i don't suppose i am the only one.

I am also restoring an ftdx401 but i am short of 6kd6 valve. they and the 6js6c's are getting as rare as rocking horse manure in the uk.

If anyone has any bits to swap or buy im interested.

>anyhow and see what happens. The receive is weak on the higher bands,
>especially 10 meters, and the bleed from close stations is terrible. I
>need to try something.
>
I've used douzens for MC1496P and MC1596P for several projects, also
S042P, but it is better devices around. Just got some SL6440, and they
have high IP3, so I don't understand a reason for using a bad device

In fact I don't see any point to waste time on FT-101/B or FT-221 or
FT-225 which are all made to same principles and suffers from bad
carrier oscillator leakage which upset AGC,. So without any chance of
good audio quality it is no point to waste the time,....but somebody
had a point: "It is a good transmitter". I usually prefer to hear what
the opposite stations says, but it is different opinions about that

I spent a week trying to find the reason for the problem with FT-101B,
but never succeeded, later tried it with FT-221, and withing a week I
managed to make only very inferior improvements. Although I had very
sensitive RF voltmeter available I couldn't trace what really caused
this radiation of carrier signal from the oscillator to an early stage
of IF, og possibly RF mixer. You can remove the carrier connection to
the product detector and still receive ssb signals as normal.

>>

it was also a discussion concerning replacing diodes in product
detector to reduce noise. I never really understood what was the
point, it seems ridiculous to me.

# 3330. Texscan Spectrum Analyzer info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-07 04:20:40 UTC
From: "Donald E. Smith" <desmith@innercite.com>
Message-ID: <3CAFC918.DFD6ACF@innercite.com>
Source record: 42858
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap,sci.electronics.repair

I am in need of information for a part on my Texscan AL-51 Spectrum Analyzer. The 1 to 2 ghz oscillator is dead and I traced the problem to a stack of four tuning (vericap) diodes with a part number of MDT606. I have not been able to locate the part number or a cross reference to this part. Might anyone out there have information on the defective part; or perhaps an extra part (or even the oscillator module itself)? Gladly pay reasonable costs. Please respond to my email address. Thanks and 73's Don Smith KB6GQA

Good grief. 6 6L6's...I can't hardly use two of them. I've been using
a 40w fender lately and it's so loud I can't hardly turn it up around
here. I can't imagine six of those. I've got to get something smaller
for goofing around and it will most likely be a fender champ or
something along those lines. "6v6".
I'm trying to dig up the parts to build one myself. I've got
diagrams/schematics of nearly all the fender amps.
>

I'd like to have one, but I'd have to get out in the boonies to be
able to use it. What you trying to get for it? Those twin reverbs have
a good sound to them.

Hi All,

Technial Topics in Radcom (RSGB) covered the problems of FT101 and strong signals and also offered a solution that I carried out and found to be very effective on my FT101B.

Details are August 1979 P739 & October 1979 P938.

Further details on request.

Source record: 42870

Hi. I found a few new fresh multi-section replacement electrolytics that are near direct replacements for the C-1 chassis mounted power capacitor in TO series "G", "H", and "L". They are black paper covered and exact physical size (reformed perfect). Value 20, 40, 60 @ 150 Volts DC. They are $10ea including postage and I'll throw in the 200 @ 10 filament cap for mounting underneath. All three are $25 including poostage. Freshen up or restore that TO. Thanks Larry

Starting price seems a tad low. Might consider bumping it
up to $350 to open, and perhaps consider a reserve
of around $2000 or so just to be safe.

Hope this helps.

Yea. I paid $50 for one a few weeks ago at a hamfest. 1943 model but has a black base instead of gray. Maybe it's the gray base that makes it so valuable.

Hi Vern,
I sell 210 uf 450VDC and 140uF 450VDC caps in sets of 8 and 6 respectively (most common for amps). My cost is much less than any of the other warehouses as I buy them in large quantity. Please see web page link below for more info.

$250 Reward, No Questions Asked-
For the return of my Navy AMA radio, serial #205,
which was stolen last year from Greenville, Texas.
An AMA is a WW-II "handie talkie" that looks just like
the famous BC-611 handie talkie, except it has a Navy
nomenclature tag on it and a navy-marked chassis inside it.

Wife and I are in a small town in southern Delaware with rented commecial office space. We were broken into two weeks ago. Bashed rear window in, tried to get into two locked metal file cabinets and ruined them, stole one computer & keyboard. Three other offices were broken into over last one year in a 2-3 block radius all had computers stolen. Landlord says he's been there for 30 years without a problem up to now. Cost me about $450 to replace the file cabinets. Computer was worth $75, BFD. I was mad about the file cabinets, though.

Art, W4PON

Read the listing. He's in Montreal and the B&W did NOT go for $52.
The reserve was not met. You still have a chance. Go for it.

## 3381. FS: Vintage microphones

Newsgroup: rec.radio.amateur.boatanchors

Source record: 42709

Hello,
Would anyone out there be traveling from St. Thomas Ontario (near London, Ont. or Buffalo, NY) to anywhere near a 200 mile radius of Philadelphia, Pa within the not too distant future?
I've entered into an agreement with a chap in Ontario for his transmitter and receiver and he won't ship. He prefers a pickup only.
I'd be more than happy to reinburse (in Yankee $$$ or toobes, whatever) for time, trouble, gas, whatever else, if you'll be in that area within the next three months or so. The transmitter and receiver weigh about 60# each and will be prepaid.
Please let me know if anyone will be visiting that area and is willing to make a pickup. Please respond to my email address only: yardleyite@aol.com

Thanks for the bandwidth

Does anyone out in Southern California remember the Rogers Electronics "Black Widow" transceivers? They were made by the above firm who were located on LaBrea Blvd in the late 50's and possibly early 60's. Models were available on 2m and 6m and possibly 220mHz. I'm trying to determine the year they ceased production. Any information would be appreciated. If you had one, where did you get it and what did you think of it? Thanks in advance.

- Declining crime rates our government says eh?
I've was self employed from March 1'st 1991, until November 1'st 2001 when I sold my company. In those 10-1/2 years my store was violently broken into (vehicles thru' doors etc.) four times with several thousand dollars worth of equipment stolen each time. I had my freight trailer stolen, my home garage was broken into (he went BACK to jail - was on probation), I had many bad cheques written to us (we don't take company cheques anymore), of which one was settled with a plea bargain and two others had the fraud charges prosecuted to convictions.
- I know that Dave only wants his radio back, but it would be nice if you could catch the thief as well.

Good for you - one request though - do send it via me - I will
immediately pass it on to David - I'd just like to "touch" one - have
been looking for one for a ***lonnnng*** time... but have as yet to see
one "in the flesh".

David: To have had one - and have it stolen... that really sucks!!!!!!!
hopefully it was just "borrowed" and will show back up...

(I know - Randy says I make an optomist look like a pessimist).

Hello All,

I picked up an HP200C, SN 53148, RM, audio oscillator at the Timonium Fest last weekend and have it setting on my bench with the covers off. I wanted to do a little cleaning, check the caps, xformer, etc before putting it on the variac. However I noticed, on removing the bottom panel, that there is an unmarked box about, 4.5"x2"x1.5" with 4 connections to it. Directly under the box, on the bottom cover, is a smattering of wax residue. The box looks to be made of cardboard, and I assume it is a cap associated with the tuned circuit. Can someone email me, or point me to a schematic for this old bird and give me a clue as to what type of cap this is and how to test or what to replace it with. Just a pointer someone who has one of these or repaired them in the passed would be very helpful. BTW there may actually have been two boxes at one time by the looks of the bracket. Where the second box was is what looks like a metal rectangular can cap made by Westinghouse, but no other ID is present.

73, Steve KG4SHB

The 2 that are close together are the "output to" and "return from" the SB10
sideband adapter. (I believe the left one was "to the SB10" and right one
was "back from it".) The SO239 closest to the PA cage is the RF output
from the pi network to the 50 Ohm antenna.

Hope this helps. It's been over 28 years since I sold my TX1/SB10 pair.

Message-ID: <ub4os9ad64n07e@corp.supernews.com>
Source record: 42738

I have a Eico 753 with no P/S. This rig looks nice with hardly a scratch. There is no rust. The old P/S had a burn-out transformer. I would like to have $75 for the rig, + $10 for shipping..

Ward (WB6DNE, Evanston)

# 3411. FS: Shure 444

$1,000 starting price for a 22 year old kit. Too funny, but then again there's fool born every minute.

I saw an unbuilt HW-9 QRP rig that was at $750 the other day - maybe it went for more.

Hard to believe people through away that much money on this old, outdated stuff.

# 3415. WTB: Drake AC-4 power supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-09 12:17:55 UTC
From: k5dh@raytheon.com
Message-ID: <TZAs8.659$Bd4.4728@dfw-service2.ext.raytheon.com>
Source record: 42796
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I am looking to buy a Drake AC-4 power supply so that I can put
my C-Line station on the air. I'd prefer one that's in decent
shape and doesn't need any repair work (simply because I have
too many projects already), but I will consider one that needs
fixin' up, as long as the transformer is good! I already have
a nice MS-4 speaker, so I'd rather buy just the p/s by itself.

Source record: 42798

Racal RA-17C-12 Communications Receiver for sale. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors, etc. It is all original. It is in very nice shape with top cover, copy of manual, and Racal Brochures. Stability is super with the Wadley Loop. See on page 329 of Osterman. It is listed as "scarce". This is one of the best receivers I have ever used. This one is in very nice shape and works exceptionally well. I need some room, so it is up for sale.
Price is $650 picked up in Abilene, Texas, or I can deliver it upon request to the Belton
hamfests coming up this weekend. Digital Pictures are available upon request.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

This is a coupling capacitor. I believe it needs to be bipolar, and they do die out with time. You can replace it with a pair of back to back electrolytic capacitors; I believe that's what I did with my old HP oscillator but it's been a long time.

Yep, to the best of my fading memory,
there should be two capacitors, about 8MFD at 500 volts or thereabouts.

One of them has to be a low-leakage capacitor, NOT AN ELECTROLYTIC,
as it feeds the grid of one of the tubes.

The other one is less critical, as it's just a power-supply filter
capacitor.
Watch out though, when the thing first starts up, the B+ across that
capacitor
is quite high for a few seconds. You may need two electrolytics in series
to
be able to handle all that voltage..

Check all of the resistors too... They tend to go up/down in value.
The ones on the decade range switch are particularly critical if you
want accurate frequencies.

Regards,

George

## 3424. SP-600 Crystals?

Newsgroup: rec.radio.amateur.boatanchors

It is a paper/wax power supply cap, and there should be two of them (though there are variations among the 200 series over time). I do not have my manual handy to be exact but it is about 8 mfd. You'll want to replace it with soemthing modern & better made.

## 3428. Hammarlund typestyle

Hi. I have an HQ110A-VHF that I am restoring.
The only problem is the front panel has the words
HAMMARLUND HQ110A worn nearly off.
I am sure that they did not use a typestyle that is available now, but
can anyone confirm that.
If not, can anyone supply a digital photo of that area. Then I'll put
it into a paint program and have a silk screen made.
I can just make out the ends of the letters and height, so I should be
able to get real close.
Thanks and look for me on the lowbands HQ100A-VHF and HX-50

Type faces don't really come and go -- they are used for hundreds and hundreds of years.

If you have a popular word processor like MS Word, just go to the pull-down menu and open FONT. Then go through the fonts, one by one, and you'll likely find one that matches the "Hammarlund" on your rig.

Type out the word in your processor, set the correct typeface, size it, print it out, and you're in business.

This falls in the collector class. Just as people (collectors) will pay
more than the face value of money just because it is old.

It cost $369 new back then. What's the inflation factor?

The SB-220 uses a pair of 3-500Zs and runs 2000 W PEP. How much do current
model amplifiers of that power level typically cost?

>Hard to believe people through away that much money on this old, outdated
>stuff.

How is the SB-220 "outdated"? The only things it won't do are 160 and QSK, and
there are mod kits for the latter. It's fairly solidly built and very well
documented.
Of course a better amp could be homebrewed for far less money if one is willing
to invest the time.

There's a schematic of the early version (6SH7/6AU5) here:
http://www.geocities.com/eb5agv/hp-200cd.gif

Mine has the later tubes - 6AU6/6CW5? but it looks fairly close.

Either that or learn to lip read. :/ I've seen a few that it's
catching up with them. Eric Johnson has tinititus <sp? from the years
of high volume. I sat in front of him one time at a show and it was so
loud I had to get up and move to a different place. My ears were about
to start bleeding. I've got pretty tuff ears too. That didn't happen
too often to where I actually had to get away from it for fear of
ear/brain damage. MK

# 3458. Help needed: Lafayette crystal calibrator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-10 17:19:34 UTC
From: ken.grant@uhn.on.ca
Message-ID: <af77ed9c.0204100919.852714b@posting.google.com>
Source record: 42837

Hi,guys

I've got a restored Lafayette HE-80,less the optional 100 KHz crystal for the calibrator. I've tried several 100 KHz junkbox crystals (specs unknown), but they all oscillate slightly high in frequency. The beat note (with the trimmer tight i.e. at max capacitance) with WWV at 10 MHz is about 2KHz on the high side.

Does anyone have any info on the crystal that was originally sold as an option? The HE-80 schematic seems to indicate a parallel resonant crystal with a load capacitance around 45 pF.

If the crystals I've tried were cut for a load capacitance around 30 pF, I'd expect them to oscillate lower than 100 KHz in this circuit. On the other hand, if they were series resonant, I'd expect them to oscillate above 100 KHz (which they do).

Were/are 100 Kc (oops, KHz) rocks available both series and parallel resonant?
This oscillator circuit uses a single triode with the xtal between the grid and plate. It was probably used in a lot of the 1960s Lafayette tube receivers.

While I've got your ear: this rx has very poor treble (high frequency) audio response, even after replacing all of the electrolytics. Is this due to a narrow ('communications') IF bandwidth or something else?

Any help would be most appreciated. 73.

Ken, VE3FIT

Hi guys and thanks for the replies.
The problem is that the A in HAMMARLUND has a rounded top, so do the M's. I have not found a font that will match exactly. And it must match exactly.
A digital pix of the logo would be great, it's a
HAMMARLUND HQ 110A
if any out there has one (that is with the printed lettering, not the raised lettering).
I can't for the life of me why this lettering has worn off. All the other panel lettering is perfect. Maybe the original owner tried to clean the panel, oh well.
Thanks & 73

Bill,
Yes it does...and I did with knowledge and pride.
Check the cover of the 82 or 84 handbook..can't recall..that's me and my homebrew tx.
I don't think of kits as building, just putting together something designed by others. Like unpaid assembly line work.

It sounds as though they don't understand they are only for rcvng and capacitance isn't a big issue - everything I can fit or adapt to fit my SP-600's works fine, including a few I've gumped by hand. Remember to calc the freqs right.

He ended the auction early. Probably received a high offer, but
probably also cheated himself out of a lot of money. I agree with the
earlier poster who opined the unit would bring $3K - $5K at auction
end. The buyer may flip it for a quick grand or two.

From: Josuha <jos@jos.net>
Message-ID: <ub9dm7p0h387@corp.supernews.com>
Source record: 42749

Hi.
I seen a couple of posts about unbuilt Heathkits. For most of us they are cost prohibitive because most of them are relegated to "collectors".
I was wondering..Has anybody ever thought of selling tube kits again?
Even a homebrew designed AM transmitter would be nice. I seen a couple of nice transmitters on websites that operators built.
Maybe put one of these in a kit.
Does'nt even have to be anything with bells and whistles, like a DX-60 or something.
I think it would be a great thing today for those who want to build a tube rig and learn more.
Maybe it would'nt be cost effective, but it sure would be fun.
Am I dreaming too much?..: )

Joshua

I support your opinion.
Im one of those that would love to be able to build my own station, (at least my own transmitter) Im not a
radio technician by any means, I cant even do an alignment on a radio, but I can sure do a good job of soldering components together if it came in a kit form and have a basic
idea of radio.
Kit building used to be a part of ham radio and I think there is a sense of achievement and accomplishment
Im very new to ham radio, been a tech for 8 years and just went for my code and the general about a
month ago (Im 47 yrs old) but always kept up since a teenager on the latest about ham radio...the homebrewed transmitter with a Hammarlund or Hallicrafters receiver etc., and now that I have become a "ham", I kind of wish I could bring back those older days of radio.
Just wanted to tell you youre not the only one dreaming.

Hi newsgroup. I looked into seeing what it would take to put out a new "Ocean Hopper" simple regen receiver kit. I began to line up suppliers of components. All parts can still be obtained in reasonable quantities but their total cost per set was in the $50 range making 500 run of sets. To just about break even meant selling the little receivers for about $100 each. They orginally sold for $12-15. Also, I was not getting warm feelings that Allied Radio would let me build them (to look exactly like the original) although they did seem interested. Probably have to pay some sort of royalty. Anyway, does the newsgroup thing there is a market for new $100 Ocean Hoppers? Anyone interested in teaming up to build some kits--let me know. Larry

# 3479. USCG Lightship Radio Restoration Project (?)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-11 00:12:44 UTC
From: "David C. Williams" <willi6@erols.com>
Message-ID: <3CB4D4FC.5DFA4802@erols.com>
Source record: 42757

A fellow ham and light house fan is in dialogue with the caretakers of a lightship. There is some interest in restoring the radio room to the extent possible. The following is the information he was able to obtain from the folks that run the lightship at this time. The model numbers are as follows:

CGG*FMTR*808 (or 80B)
GCF-TB-1?2 ( The ? looks like a 1)
AN-URC-7? ( The ? looks like a Z or could be a 2)
C 878/URC 7
R-649/UR
R-6?9 A/UR ( The ? looks like a 4)
49545
RBO-2

Any information on these units would be appreciated.

Please E-Mail to willi6@erols.com with cc to wb3aal@fast.net

Hi Larry,
I think if you crank in inflation, you will find the current Ocean Hopper selling price would be well over $100. I say go for it- I'll buy one.

Hi Gil.
Well, I believe that it's a great way to learn by building kits. And
IMHO, although new rigs are great, there is, as one post said, a sense of
accomplishment.
I don't think the kit would have to be even "painted" and decaled.
I would be satisfied with the chassis, front and cover and a
comprehensive assembly manual. Let the builder "customize" the looks of it.
This would even keep costs down.
The main thing is it would be great fun, a person could learn, and you
would have a nice working rig that you built yourself.
Anybody who wants a tube rig, is paying $100.00-$1000.00 sometimes on
Epay. Most of this stuff needs work anyway.
With all the talent the ham community has, seems a nice transmitter,
receiver etc could be designed and keep the cost down. I'd pay the money.
We're already paying the money as it is for 30-50 year old rigs.
I bet with the talent we already have, kits could be designed that would
blow Heathkit, WRL and Johnson away.

I do a lot of refurbishing of old broadcast/sw radios from the 1930s.
Many have completely rusted chassis, etc and must be totally
disassembled, sandblasted and rebuilt. Thats alot like building a kit
for me!
On another note, there was an outfit selling AA5 tube radio kits with an
attractive see-thru plexiglass case. They also had some SW versions.
The prices weren't totally out of line but they were pretty high. There
was quite a bit of interest in them but I don't know if that turned into
sales.
The problem I see is the availability, and consistency, of parts. You
can still buy a simple 365pf tuning cap these days but you'll pay >$12
for a new one. If you were trying to sell 500 kits using such an item,
I bet you'd find the cost for parts going up instead of down. Of course
you could re-engineer it to get around certain parts but at the end of
the day you'd likely wind up with a solid-state kit on a PCB!

Probably. It could happen I guess, as I've seen kits for tube geetar
amps.
But I don't think the demand would be high enough to make any money as
far as old AM type gear. The geetar amp kits make money because there
is more of a demand, and many will pay ridiculous prices in many cases
for fairly simple gear that could be homebrewed for 1/3 the price.
What I would do is just overhaul an old existing rig, or find a few
old handbooks that have xmtr projects in them and build one of those.
There are loads of them in old handbooks and even old QST's.
Scour hamfests for old junk parts such as transformers, chokes, etc..
Many old mil surplus chassis's can make a good place to start. I built
my first novice xmtr from an old navy xmtr chassis. As far as kits, I
see solid state being about all you will find in kits. For good reason
for the most part probably.
Parts are cheaper, no hi voltage, etc. It's getting hard to find cheap
tube gear parts. In the 60's you could grab big transformers out of
most junk TV's good enough to make a small xmtr. They don't even use
them now. So you have to find old junk parts from other hams or pay
through the nose for new ones. MK

snip...: I bet you'd find the cost for parts going up instead of down. Of course
: you could re-engineer it to get around certain parts but at the end of
: the day you'd likely wind up with a solid-state kit on a PCB!
:
: -Bill WX4A

I think you hit the nail on the head. What kept these kits affordable in the first place, was that they used low cost parts of the day. The QRP kits of today may just become the Ocean Hoppers of tomorrow.

Of course innovative engineering with the Amateur in mind is what ties seemingly unrelated technologies into a new product rather than a copy of what is already in use.

I can recall several projects in the magazines that made use of cheap surplus parts to get high performance on a budget. I.E.: the use of surplus telco 88 mh toroids in the ST-6 teletype demodulator filters. These days numerous low cost parts are available from surplus jobbers that allow lots of neat toys on a budget. Perfboard and dead bug is still an option for experimenters.

What an unbuilt kit would go for has absolutely nothing to do with either
how much they sold for when new, or what an equivelant amp would sell for
now.

You are talking "rare". Something that would cause a serious collectory to
spend his life's savings and crawl through broken glass to get said amp.

I wouldn't and you probably wouldn't, but an unbuilt Heatkit of any model is
"valuable", probably worth it's weight in Silver, if not gold.

A couple of years ago there was a guy in California (I think) that was selling kit version of an NA5. It sold for $150 or $160. I purchased one and exchanged e-mails with him a few times. I think the cost of parts was his biggest problem. He said he had more orders than he could handle, but I suspect that he just didn't have enough mark-up built in to afford to hire help. The name of the game is margin and volume. I too wish there were more kits available.

# 3495. noise blanker improvement?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-11 06:27:24 UTC
From: AB Brown <abbrown@nospammail.com>
Message-ID: <a93aas$68n$1@slb1.atl.mindspring.net>
Source record: 42773
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Currently, I am using two amateur radios for communicating: one is the Icom 718 and the other, strictly for 10 meters, is an older Realistic HTX-100. I have used the HTX-100 for about 5 years now and I just obtained the Icom less than 6 months ago. I am puzzled by something though that I was wondering if anyone could address- the noise blanker on the HTX is FAR superior to the one on the Icom. I am wondering why? The Icom was a lot more expensive and I just figured it would have a better blanker. It has AF DSP option, which I tried, and was disappointed. In every case on 10 meters, the HTX receives better due to blanked noise effectiveness.

I doubt I could internally modify the Icom's blanker for better performance so I am wondering if I could add an external, synchronous (or other ?) type noise blanker at the antenna input. I have read a few things about this type of blanker and, apparently by using noise generators, you can match the phase of incoming noise and cancel it out. Any suggestions for a blanker, either internal or external? I understand the synchronous type is better at lower Mhz, but will it work for 10/15 meters?

I believe the main sources of noise at my QTH are computer (of course) and pole transformer noise. The computer noise is easily solved (by turning off my monitor) but I have experienced the transformer noise for many years, and the HTX blanker always nullified it.

Appreciate any suggestions from the groups.

Thanks,
AB

> I was wondering..Has anybody ever thought of selling tube kits again?

One problem that rears it's head when contemplating an enterprise such as tube kits is the myriad of regulations that have come into existence in recent years. The old kit companies didn't have to contend with the FCC or the safety agencies. Liability issues became the reason some kit companies ceased operations. Eico ran into problems complying with FCC regulations when they marketed a CB kit. They ended up having to ship the kit with a portion of the transmitter assembled and adjusted. In the case of line-operated kits, there are areas in the country where they would not be able to be sold without some safety agency approval - but the real problem is still getting sued when someone electrocutes themselves or sets their house on fire. There is no simple solution.

Source record: 42778

Hi, Joshua...

You've received a number of answers and I agree with almost all.

Tube equipment poses a problem because, with the exception of very large, expensive transmitting tubes, nobody I know of is still building tubes. You can still buy NOS ("New Old Stock") tubes but you'll pay $5-10 or more for tubes that, when new, sold for $.50 retail. And they'll only get more expensive as the supply dwindles. Tubes, also, go out far more often than today's solid state devices... and, they cause heat which hurts other circuit components.

I've built Heathkits and current solid-state kits. I'm sorry, but the only thing you'll learn is how to solder and maybe how to troubleshoot. Nowhere in the process are you told where the component you're installing fits in the circuit.. much less what its purpose is. It's like, "Install .01 caps at the places on the board marked C2, C5 and C12 through C22."

In the Heathkit days, hams built 'em to save money. I was in the ham radio business then and can't tell you how many people used to tell me --with great pride-- "I build all my own equipment. I won't buy any commercial gear." Then, when commercial prices dropped and Heathkit prices went up, 99% of those same folks said, "My next rig will be commercial. Heck, I can buy commercial now for the same price as Heathkit." Uh... what was that about "pride"?

Unfortunately, most of the old kit stuff was nowhere near the commercial radios in performance, either. But, it definitely is a great feeling to talk to other hams on something you built yourself. It adds quite a dimension to your ham activities.

There IS, today, a kit radio that will perform right up there with the BEST OF THE CURRENT COMMERICAL RIGS. And it has been built easily by many folks who have never built anything. It takes 40-50 hours to build but the instructions are as good... maybe better than Heathkit's. It is the Elecraft K2. The basic CW rig is under $600 and it works 80 through 10 meters and has far too many built-in features to list here. You can add options for SSB, internal auto antenna tuner, internal battery, noise blanker, CW audio filter, 160 meters, RS-232 computer control, etc. Add only the ones that interest you. It is a QRP kit... runs up to about 10 watts output. Next month they're introducing a 100-watt output option.

The key to any radio, of course, is the receiver. The K2's receiver is right up there with today's $3000-4000 commercial radios. The ARRL lab said it performs --in the presence of very close strong interference -- "better than any radio we have ever tested in our lab."

No, I don't work for 'em. I had seen their ads for a couple of years but never gave it a thought because kits have been traditionally mediocre performers. Then I started reading the Elecraft reflector and it really got my attention. I bought one and have had a ball with it. When I get my 100-watt amp, I may have an Icom 756PRO for sale.

BTW, the K2 has a little brother with up to 4 bands, CW only, for about half the price.

Sorry for the length of this reply and good luck in your kit search.

Alan,

Although I purchased the Icom used, it did already have the noise blanker,
which hardly makes any difference in noise level when activated (unlike the
HTX). The AF DSP was purchased and added later, but to me it is no better
than the already present blanker.

Source record: 42782

CENTRALAB CERAMIC ROTARY SWITCH -This is a NEW/UNUSED Centralab ceramic rotary switch. Box has faded "2005" on the label, but not sure the box matches the switch. The switch appears to be a 2-pole-12-throw rotary suitable for audio or low power RF applications. The stops on the switch mechanism currently block it to 2-throw positions, but by changing the tabs it appears that all 12 switch positions can be enabled. Not sure if contacts are copper or silver plate. $18, I ship. Pay by money order or cashiers check. Email to dt0124@comcast.net

I will attest to Ed's remarks about the K2. The thing is one
sweet little radio. I did not build the kit - but I spent many
enjoyable hours "inside" one that was built by a friend of mine.
He made a lot of rookie errors in the process - he had VERY
little soldering/construction experience when he bought this.
Anyway, there was one particularly nasty problem, which
turned out to be a coil wound on the wrong torroid. It was
hard to find, as the torroid was the correct size and color,
but the wrong material. I got absolutely SPECTACULAR
technical and parts support from the folks at Elecraft as I went
through the repairs on the rig - all of which were construction
errors. It is a sophisticated microprocessor controlled radio
in kit form, and I can unhesitatingly recommend it and the
company that makes it to those who want to build something

like that from a kit.

I too have no connection with the company - just delight with
the way they stood behind their product.

It very well may be that your ICOM "hears better" than the
HTX-100. If it "hears better" it will "hear" noise at a level
below what the HTX can "hear". End result: the HTX
sounds better - but it misses the weak ones that the ICOM
"hears".

On a quiet band, the pre-amps in my 746 are great - but if
the band is noisy, I find that turning them off makes the radio
sound much better. Bottom line - there may be more noise to
blank due to greater sensitivity in the ICOM then in the HTX.
I have neither of the rigs you mention, so I'm only pointing
out a possibility. For all I know, the HTX may "hear" better
than the ICOM.

# 3508. Re: Anybody ever thought ofbringing the kits back?

Hi Ed,
Yes, I have heard good reports about the Elecraft.
I agree with you about the safety regs now in place. It would make designing a kit more difficult. Seems everybody is in the "lawsuit" mode. Someone makes a mistake and they want to do the "blame game" on someone else. *sigh*
Still, it would be nice to get a well designed rig out. I guess I am partial to the tube rigs. To me it is the tradition of what radio was about. Call me a nostialia kind of guy..: ) And I believe even many younger operators have an interest in the tube technology for the same reason if not just for fun.
I know that many as you said, did'nt come up to the performance of the "factory" made gear, but it was fun.
And what alot of us are paying for 30-50 year old rigs that need work, unless your collecting may as well pay for a new kit rig and do it all yourself IMHO.
Apart from the "name" (Heath, Johnson, etc. if your collecting) your still putting alot of work in it and working with old used parts that have to be trouble shooted or replaced anyway.
As one post suggested, it could even be designed "hybred"..solid state, tube modulation, finals etc. to keep cost down. Also parts should be chosen as possiable (solid state components, connectors etc. for example) for availability as your local electroincs or RS. for easy replacement (another problem with kits of the past no longer made).
I have no doubt with the talent the amatuer radio community has, a good rig could be designed for those of us "still dreaming."..: )

I can't afford an Icom, Kenwood, etc. but I do have one of the RS HTX's, and it is a pretty good performer for what it cost. I suppose, being designed for a single band, it probably makes less compromises. And for that matter, it's little different than some of the high end CB's RS made, and they had quite a bit of experience with those.

Receiver wise, the only thing I have for comparison is a boat anchor Halli SX-117. I've never tried them side by side, but will do so soon and report back.

Contrary to claimed HRO-expert mythology, my very early-production set has this grey dial (though in much better shape<G>). What was that one pulled from, David?

12AX7, 12AT7 and EF86/Z729 are still in production as are a number of
audio/rf output tetrodes, 6L6, 6V6, EL34 etc.

(I'm in the middle of designing a "modern" trf set using twin triodes in
cascode circuits for the rf amp and det.)

I built a lot of Heathkits and must agree with these comments. In
general, they were not up to commercially-built standards. I used them
anyway. One factor not mentioned: the owner (usually) was not afraid to
open it up and at least try to fix it. This was educational and often
solved the problem. Also, Heath had a lot of products where there was
no (reasonable) commercial equivalent.

Why not use a pentode like the EF86? Better bandwidth due to reduced input
capacitance, and more gain too. And in production, of course.

The EF86 is what the 6AU6 wants to be when it grows up.

Don,

Congrats on the Super Pro! I have one that I am working on right now. See W2EC's web page for more info. Basically you should bring it up real slow on the Variac. Satrt with about 60 volts than slowly over an hour or mor to 120. You should change all the Black Beauty or paper capacitors as well as all of the electrolytics. This only takes a couple of evenings and is very enjoyable. You'll learn about the radio and servicing in the future will be a breeze. Get yourself a handfull of 6Ba6's the set has at least 7 of these. This makes a fantastic Broadcast Band dx machine!

> 4ufd respectively, and both rated for 800v in the original spec.

Hello All,

Thanks for the many kind replies. I assume a Solen Fast Cap,
metallized polypropylene, would work ok. The sizes are 8.2 uF @ 630V
and 3.9 uF at 630V.
Would I need to do 4 of these caps, 2 sets of 2 in series or is
630V close enough ? If this is not the correct cap for the job could
someone be more specific.

Tom Bavis pointed me to a schematic on EB5AQV's website but the
schematic was for an HP200CD. My unit is the probably the second
or third model HP made after the HP200A (the first HP product).
My tube lineup is as follows:

V1: 6J7
V2: 6F6
V3: 6J7
V4: 6V6
V5: 5Y3GT

Great idea, but I suspect the economics are against you. A year or two ago, there was a company called something like ghostmoon.com that sold kits for classic "All American Five" tube radios. Maybe they had a shortwave set, too. It would be interesting to track down the former entrepreneur and find out why he went out of business. My guess is that the numbers didn't add up -- he couldn't provide the product at a price that enough people were willing to pay.

As an alternative, how about finding a used rig that you like and "remanufacturing" it? See the article, "Ground Up Restoration," at http://antiqueradio.org/groundup.htm to see how my pal Walter remanufactured a Zenith tabletop radio. In essence, you are making a kit from an old radio: stripping it down to bare metal, saving everything that's usable and replacing the rest with new. Then you build it again.

Regards,

Phil

Been there, done that (last time with an EF184) but I wanted to try something
different. I'm using the rf amp design from my Racal RA-17 (ECC189) and a
detector based on the Dutch "Radio Rotor IV" (ECC81). I _will_ however be
using an EF86 in the variable frequency & variable Q audio filter...this is
quite a complicated radio for a trf ;-)

In reading a lot on the Icom reflector, I have found consistent comments indicating the problem is Icom's engineers simply do NOT know how to build a really effective noise blanker! I currently own a 756PRO and it can't hold a candle to the blankers in other radios I've owned including a Kenwood 940, Ten Tec Titan and Yaesu FT-1000D. It's probably the worst HF NB I've used. I have not used the Icom 718 but doubt there is any reason to believe it would be the one exception in their line.

I have seen some incredibly good blankers in RS products.

I fully understand your nostalgia, Joshua.

I've been licensed for 51 years and have nothing but fond memories for the equipment we had "back then." I subscribe to the theory, "Real Radios Glow In The Dark." I still lust for an HQ-129X (and a couple of other items). From time to time I find one in good shape at a reasonable price, but then ask myself... where would I put it. That kind'a put the issue to bed.

About a year ago, I sold off some truly mint-condition Collins gear including an 32S-3/75S-3C line, a KWM-2A and two 30L-1's. I hated to see them go and thoroughly enjoyed owning them. But I had to keep a couple hundred bucks worth of tubes on hand and frequently found I had to go through as many as three, fairly expensive, NOS tubes before finding one good one. And owning tube gear necessitates a decent tube tester. TT's are now "collector's items" and a decent Hickock will cost +/-$200. Then just about the time I'd get one piece of gear running perfectly and cabled back up into the system, something else would crop up that needed attention.

While Collins --unquestionably the best of the old tube gear-- is still the best looking ham gear ever made and had a beautiful sound all its, own on both transmit and receive, it had shortcomings by today's standards. No noise blanker... when things get REALLY noisy, just shut down and go watch TV. (I frequently referred to my FT-1000D as "my $4,000 noise blanker.) When the legendary Collins filters weren't enough to pull a weak one through the QRM, no choice but to give up where most of today's better stuff offers a way to further narrow or bandpass-shift around the QRM. And as indicated above, tube gear needs more repair and attention than today's solid state equipment. Current gear does nothing to feed your nostalgia hunger but it's a far more practical use of funds.

When I sold the Collins, I bought the Elecraft. I think I'm having more fun with it anyway, (but I still miss my Collins gear).

Cheers... Ed

Yes, but isn't that part of the "joy" of operating boatanchor gear? I've often equated the operation of a typical boatanchor transmitter with the operation of a steam locomotive. It's a lot of work, and VERY unforgiving of any mistakes.

I suppose there is something to be said for all kinds of gear, but I still miss my old Navy GO-9 that had about 9 things to tune between the VFO and the antenna. Guess I'm just addicted to knob twiddling.

True for Kenwood too. I have an old Uniden 10 meter rig which has the
finest noise blanker I've ever seen for ignition noise. I've compared
it against a half dozen Icom and Kenwood rigs and it beats them all by
far.

Designing noise blankers must be part science, part art and part magic.

Original manuals are available from:

Gary Wingerd 301-582-2424
gewingerd@netzero.com

He charges about $50 each for them, plus postage to the UK.

I'm still looking for any information on the MA4156 (VRM4156) transceivber
and the Royal Navy 1255 system. Gary came up dry on that one.

Hi Ed

I hate to admit it, but I have to agree with you as well.
I have an HTX-100 and will use it rather than a Kenwood HF rig, unless the band really gets rough.

I have inline with the HTX100 a very old HyGain Receiver Preamp from the hayday of the CB boom as well. I have found that by keeping the Receiver Gain on the HTX100 turned down to about 1/2 and using the external pre-amp I can pull in stations that fly right by the Kenwood. The HTX100 hears them without the pre-amp with the gain cranked up, but the pre-amp seems to keep the noise to a minimum and brings up only the signal itself, in most cases, needless to say, there are exceptions. I also have a DSP from RS, it's great on CW but almost useless on sideband.

When I take the HTX100 on the road, the NB filters out every speck of ignition noise, including that from other vehicles and trucks around you.

The only NB filter I have found that works better than the ones used in the RS ham gear, was the 'crystal lattice filter' that was found in many Lafayette R&E Chicken Band rigs.

# 3553. "Enigma" History (Part 1)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-12 19:08:50 UTC
From: Jeffrey Herman <jeffreyh@hawaii.edu>

Since many amateurs are also Enigma buffs, I thought this might be
of interest. The following excerpt comes from "Capturing Enigma,
How HMS Petard Seized The German Naval Codes," by Stephen Harper,
1999, ISBN 0750923164.

73, Jeff KH6O

Operations Specialist | Mathematics Lecturer
U.S. Coast Guard | University of Hawaii System
jherman@d14.uscg.mil | jeffreyh@hawaii.edu
---

The Enigma coding machine owed its concept to an
American named Edward Hebern, who in 1915 devised a
machine-generated code by adapting a newly produced
electric typewriter. The letter keys of the electric
typewriter were switches with each key connected to its
appropriate letter. Hebern simply rearranged the wiring
so that the letters printed were different to the letters
on the keyboard. The letters ADVANCE might be printed
BXKBZTJ and with the addition of suitable switching
circuits the machine was reversible. Encoding and
decoding took no longer than the time to type the
message. But messages sent on Hebern's machine, while
secure from general readers, offered no difficulty to a
cryptanalyst. All Western Languages have a characteristic
repetition rate of letters, whatever the text, and letter
frequency analysis is the cornerstone of cryptanalysis.
Realizing this, Hebern experimented with a machine
using rotors which switched the connections of his
electric typewriter each time a key was pressed. He
eventually sold what he called an Electric Code Machine
(US patent 1,683,072) to the US Navy in 1928.

In Germany, Jugo Koch of Delft developed a secret
writing machine he called just that in German:
Geheimschrijfmachine. He sold the patent rights to
Arthur Scherbius, an engineer, who went into production
in 1923 with a three-rotor machine he called Enigma.
This was exhibited by the German post office at an
International Postal Union Congress as an inexpensive,
reliable means of safeguarding commercial cables and
telegrams. This came to the notice of the
Chiffrierabteilung (the Cipher Department of the
Reichwehr, the small army Germany was permitted

under the Versailles Treaty), and its head, Col Erich Fellgiebel, ordered its complete withdrawal from the commercial market.

In Poland, reborn after a century of partition as a result of the Versailles Treaty and surrounded by potential enemies, the highly alert intelligence service Biuro Szyfrow (BS4) was keeping close tabs on Hitler's military preparations. They were concerned that increased German military radio traffic on their border indicated readiness for operations outside Germany, because such internal traffic would normally use landlines. In 1928 their customs delayed a package sent by rail to the German embassy in Warsaw, and called in the experts. It arrived on a Friday evening, and despite diplomatic protests the Polish postal authorities insisted that their offices could not be opened again until Monday morning. Polish intelligence's Fourth Section (BS4) were able to spend the weekend examining the new commercial military Enigma machine before carefully repacking it and making it available to the unsuspecting German embassy.

This provided valuable information about the internal wiring of the Enigma's three rotors and an additional plugboard that produced final superencipherment. One of their mathematical team, Marian Rejewski, reconstructed Enigma's wiring cryptanalytically, and a rare commercial Enigma they had acquired in Sweden was adapted to miitary standards. In 1931 a clerk in the German Defence Ministry, Hans-Thilo Schmidt (later code-named Asche) alerted the French security authorities to a new German coding machine. He approached the French Service Renseignements (intelligence service) offering documents relating to what he claimed was the most closely guarded secret of German intelligence, the Enigma machine. (After the fall of Frnace Asche was arrested and shot, after the French agent he had first met -- than an agent of Vichy France -- denounced him.)

Up to the outbreak of war Asche made contact with French intelligence officers nineteen times and gave them hundreds of photographs of highly classified German documents. At one meeting in 1932 he handed over an instruction manual for the Enigma machine and a sample enciphered message with its plain text equivalent. These were passed on to Polish intelligence and with their help and the machine they called the Bomba, Polish cryptanalysts were reading many messages sent on the original Enigma machine until almost the end of 1938.

On 15 December 1938, the Germans issued two additional rotors for every Enigma machine so that the three operational rotors were now to be selected from the set of five. This increased the possible combinations by a factor of ten, from six to sixty, which meant that many more Bombas were needed to transcribe Enigma messages, with many more highly trained staff required to operate them. This was beyond Polish resources and German Enigma traffic was secure again.

A Preliminary meeting between French, Polish, and British intelligence officials took place in Paris in January 1939.

Exactly my point, Bill. I can't figure out why the regular HF manufacturers like Icom and Yaesu don't design adequate noise blankers. This 718 for example was over $500 while the HTX was obtained used for under $100. The HTX has a far superior blanker. I've tried AF DSP, but the blanker is still better. IF DSP I think would be a different story though, but I think excessive cost would be an issue.

I'm now checking out a synchronous noise blanker design on the web. Looks promising, but according to the info. I've read, works best only on the lower bands, especially at 160 meters and lower. I'm also checking into a phaser that samples noise and deletes it by inverting and cancelling. Both of these designs attack the noise before it enters the rig and, at least to me, show promise.

Gentlemen:

I am attempting to put together a resource list of sources for parts, accessories and services for the Johnson Valiant transmitter. For example, 1) there is a company that supplies newly silk screen front panels, 2) a ham that supplies the long screws and other parts (relays - etc.), 3) a modification to improve the audio by changing the interstate audio transformer -- details of the mode and source of the transformer. 4) source for other transformers such as Peter Dahl, etc. 5) sources for tubes, etc.

I'm also interested in modifications recommended for the Valiant.

I'd like to include the names, addresses (web pages if any), and contact numbers for each resource.

The list will be available via email for anyone interested

Thanks for your assistance.

Ed, while I cannot agree so strongly with your conclusion, I will admit that my 765 and PRO leave a bit to be desired in the NB department. As far as Icom is concerned, the best noise limiter or blanker I have ever had on a receiver - since 1945! - is the one on the little IC-730 that I use for mobile service. It can totally remove ignition noise that is S7 or more on the meter. Couldn't belive it, first time I tried it. So, it is not a generic Icom failing.

I think that what is happening with the NB situation is that the operation and eventual effectiveness of the blanker has to be balanced off against other performance properties of the radio. I think that we can all agree that Icom engineers are just as competent as any others at designing HF amateur radios, so they are doing what they do for sound reasons, just not very obvious reasons. I suspect that they can design a NB that will handle anything you can throw at it with almost perfect operation. But, what has to "give" elsewhere in order to allow that degree of performance?

Engineering such complex products as our modern transceivers is never black and white - I suspect that even most shades of grey have been worn out by now! <:}

One nasty problem in noise blanker design is the need to have a chunk of circuitry before the narrow crystal filter. This circuit has to delay the noise pulse on the signal path long enough for the noise detector to trigger and shut the signal path down. A few hundred picoseconds would be nice... Maybe even longer to get a really good performing noise blanker. A microsecond or so time delay would help a LOT.

==========

In order to get good strong signal handling most modern designs place the narrow filter as close to the front end of the radio as it can get... Often right after the mixer. This provides better strong signalling performance.

On the other hand, the crystal filter tends to 'ring' on the high energy noise pulse. Also, the phase shifts and group delay on the sides of the crystal filter tend to broaden out the noise pulse, frequently making it very difficult to have a noise blanker work on this broad and long pulse.

So, as a few people have suggested, it is all a matter of compromises in design. The trend has been to make better dynamic range radios and the engineering required to do that makes it difficult to add a really good noise blanker.

Many of the CB rigs had quite a bit of circuitry in them which slowed the main signal path down... They also usually have relatively lousy strong signal handling ability. These CB rigs were optimized for use in cars and such, focussing on low cost.

They also tried to make them handle ignition noise blankers and in the tradeoff they overload much more easily in a strong signal environment.

==========

I am not saying it can't be done, but rather that making a radio with good dynamic range AND a good noise blanker are almost contradictions. The designer can do one or the other. Both at the same time takes CAREFUL engineering and adds quite a bit of cost.

I have an Icom 730 that I used a few times in a VW squareback, which had terrible ignition noise that even the 730 couldn't tame. I built up a little circuit that fired a one-shot from the ignition coil primary, like a tach does, and fed that into the noise blanker circuit of the 730. Did wonders.

[Side note: I gave my "Antenna Basics" talk at Arkiecon last week. At one point, I ask the audience to vote for how many dB they think there are in an "S-Unit". The first choice was "less than 2". A hand went up in the back. Then 2. Same hand. 3. Same one, at every choice, all the way up. . Hm. . . somebody in the audience Has A Clue. Turned out to be George, who introduced himself after the talk. I enjoyed meeting you, George!]

Hey Ed!!

I run my K2 in my old Jeep now and then. And my Jeep needs a
radio license! It even tears up 2M FM. But the one mode on the
K2 NB takes it ALL out. I mean ALL! I've never heard something
work so well.

Next best the Uniden uPD858 chassis SSB set as used in the
TRC-449. That seemed to be REALLY effective. The 424 was
ok for an AM rig, but not like the 449 (and the other two variants,
the 457 and 458, which were pretty much the same rig, only the 457
and 458 had an extra can and filter in the IF.)

My last Kenwood was an old '940, probably 10+ years ago. I thought it had a pretty good NB. I owned an FT-1000D for eight years and it could take 20-over 9 atmospheric static down to S2. Also had a Ten Tec Titan that --once equipped with a redesigned NB-- was as good as any I've ever used.

I guess every model is different within each brand.

Hi, Mike! Good to see you.

I haven't tried my K2 in the car, but I have the blanker and it seems to work fine.

Gary, A lot of folks don't give RS credit for some of the things they did extremely well. Maybe I'm partial to 'em since I worked in the main office until about 8 years ago.

If you want to hear a DSP filter that'll knock your socks off, listen to the ClearSpeech system... especially the new version that started shipping last August/September.

Surely theres a case for you to scratch build a vavlve radio. There are enough designs about. Even if you have a limted supply of cheap tools you could get a a radio up and running at much lower cost and have great fun building it and pleasure when it bursts into life.

besides just a few cheap tools you will require some "E" for effort.

Hi Ron. Yes. I have been going through some old ARRL books from the 50's and 60's.
They have a couple of homebrew ideas.
Thinking about something with a 6146 type final. Have some odds and ends laying about.
Something for AM/CW. Nothing fancy.

perhaps they didn't know how to build an impulse-noise-generator?
I made one and used it to improve some of my rigs, but I am not sure
it is has exactly the right sort of pulses.

On Ft-7/FT-7B you could easily improve the NB with larger time
constant at the NB output stage

Hi

I have started to build a web site giving details of some boatanchors of interest to me - mainly military and commercial gear from Australia and the UK from WWII to 1970. I have incorporated my R1155 pages created previously. See

http://www.zipworld.com.au/~sb/radio/

In general I have given a brief description, photos, added comments on collector interest and details of my own set. Also some have instruction manual extracts and circuits. Have a look and comments appreciated.

Hi Evan,
Just leave it alone. The static charge will slowly dissipate and it will return to normal. Also, a shorting wire across the terminals might not be a bad idea until you use it.

Regards,

# 3587. FS: Complete Ten Tec Pegasus / RX-320 station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-13 16:32:50 UTC
From: NZ8J <timcook@erinet.com>
Message-ID: <3cb86050$0$35576$4c5ecdc7@news.erinet.com>
Source record: 42565
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap

For Sale:

1. Ten Tec Pegasus with latest firmware (has rx ant mod for use with N4PY software and ext speaker output)

2. Ten Tec RX-320 general coverage receiver with power supply

3. Ten Tec model 1210 10 meter to 2 meter all mode transverter

4. Ten Tec model 1208 20 meter to 6 meter all mode transverter (factory assembled)

5. Ten Tec model 302 keypad/encoder for Pegasus

6. Ten Tec Hand microphone

7. relay box to allow dual rx with Pegasus and RX-320 receiver

8. All manuals

All equipment is in excellent condition and works perfect. $1095 firm shipped in the lower 48
Do not want to trade or split up equipment

Please email with any questions

Thanks
Tim

The point is so one does not blow something (old caps etc.) by putting full
voltage that has'nt been on in years..
(And you have a headstart to run like hell should you start a fire..: P)

I have a HQ-129X. Works good. All Original. Front panel very good. $150.00
or trade for working AM transmitter, DX-100, Johnson Viking etc.

I also have a Kenwood 711A 2 meter all mode, FM/CW/USB/LSB. 100% electrical.
Nice rig. (I have all the 2 meter I can handle at this point..)
Will trade for AM Transmitter and receiver combo.

Licensed operators only please. No dealers.

## 3594. Power Consumption

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-13 18:33:53 UTC
From: toxic_waste@citizensband.com
Message-ID: <1f2adfc1.0204131033.7c1f3052@posting.google.com>
Source record: 42572
Cross-posted to: rec.radio.amateur.boatanchors,uk.radio.amateur

Just looking at some photos of boatanchors and in particular the link posted by Wlat regarding the subject of the Titanics radio equipment. The power consumption of high-powered older valve type rigs, compared to the modern equipment, must be pretty horrendous?

Do boatanchor enthusiasts find their electric meters spinning faster than their hard disk drives? ;-)

Cheers
toxic_waste

Being from Dutch origin, I cannot help but want to throw in my 2
cent's worth:

I thought the thing was invented, built and sold in the Netherlands
way before WWII, but there wasn't much market for it. Untill some
Germans thought it would be a nice item to use in the buildup leading
to the 3rd Reich. They may have bought the rights or simply copied it.

>In Germany, Jugo Koch of Delft developed a secret
Could this be Delft in the Netherlands?

>writing machine he called just that in German:
>Geheimschrijfmachine.
Which is Dutch. It wold be something like Geheimschreibmaschine in
German.

Nothing personal, Jeffrey - you only posted what you read. Can anyone
clear this up once and for all?

Bart.

There may be a 'NOSPAM.' in front of my E-mail address.

They use about the same amount of power as incandescent lightbulbs. Almost all
are from 35 to 120 watts.

Don't believe it. A few months ago someone on this ng mentioned that
at 10W output their transceiver was pulling only 13A at 12V.

I hated to point out that a WS19 (1942 vintage) put out 5W for a 9A
current draw - AND that included the intercom and B-set loads!

[FYI it was a mere 6A for the A-set only]

>Do boatanchor enthusiasts find their electric meters spinning faster

I have a Kenwood 940TS and the noise blankers (there are two of them, work
about the same) are very FB!

Also the Drake R8 has a very effective noise blanker, with wide and narrow BW
modes. Both will clean up a signal you cnouldn't even tell was there
otherwise. I can copy LW beacons thru the light dimmer buzz. --Mike K. AA1UK

Yes, the SP-600 is a great BCB receiver, especially for local stations where you can open the IF up to the 13 KC bandwidth.

However, my set produced some "phantom" copies of some local BC stations when I lived outside Chicago. These were high-power stations, but I suspect that under nighttime BCB conditions, all the stations and static might add up to extra noise due to this intermodulation effect.

Someone suggested that for BCB work, you might try replacing the first RF amp tube with a few pF cap between the grid and plate holes in the socket.

As for replacing all the Black Bomb caps: Yes, it's a good idea. No, it won't take just a couple evenings, if you do inside the RF deck and the IF cans, and you should. 73, Mike K. AA1UK

Source record: 42583

Bart,
I think you are correct. I quote from "Most Secret Ultra" (aka "Top Secret Ultra")
by Peter Calvocoressi, one of the chief officers at Bletchley Park, where "Ultra"
was developed ("Ultra" being the intelligence derived from cracking the Enigma
cyphers).

"The original version of the Enigma machine was invented and patented in 1919
in Holland and was developed and marketed in the early twenties by a German
who incorporated the Dutch invention with his own and gave the machine its
name."

Presumably, this German was Jugo Koch - so in a way, you are both correct.

It should also be noted that between 1929 and 1933, the courageous Polish
mathematicians at Posnan University in Western Poland created a special school
in mathematics at Posnan U. Their concentration was in cryptography, and their
aim and purpose was the defeat of the Enigma machine.

I quote a bit of espionage philosophy by Calvocoressi:
"The importance of intelligence about the enemy is obvious. To know his strength,
his order of battle, his mind - all this is crucial.... But one method is in a class by
itself. This is overhearing what the enemy himself is reporting to himself about
himself."

I am writing a WWII spy novel that peripherally involves Enigma and the Poles.

Jeffrey, I look forward to your next installment.

Perhaps I should point out that there was a "Geheimschreiber", but this
was a different machine to the Enigma: it encrypted by doing bit-wise
operations on 5-bit Baudot code. Manufactured by Lorenz and Siemens.

One cylindrical EFJ low pass filter. Good for keeping harmonics/spurs of HF transmitters out of your own and your neighbor's televisions. It exhibits a very sharp cutoff starting at 52 MHz (5 or 7-section elliptic function). It is bilateral 50-ohm and as I remember, is also good for the low end of 6-meters. Input and out are "UHF" female connectors. If desired, I can run an S21/S12 plot of the response in a 50-ohm system. Unless you build your own, you can't do better than this unit. $35.00 plus shipping. Cashiers check or US postal money order accepted. Please respond to email as I do not check the Newsgroups every day.

I doubt if they compare that badly, but for some reason, calculations of power consumption always ignored the power used by the valve heaters.

I don't really understand the point requiring the data, if it is
exactly like 6146B, you may look yourself at
http://frank.nostalgiaair.org/sheets6.html

I haven't had any of those Kenwood rigs using the device, but believe
it is just a question of different neutralization setting between
S2001A and 6146B. It might of course, give you higher price when
selling to dummies if you could show a data sheet.

Source record: 42513

Heathkit Q Multiplier Model Gd-125 with the Heathkit assembly Manual

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=1346341816

Heathkit Q Multiplier Model Gd-125 with the Heathkit assembly Manual. Controls include, Notch Depth, Peak, Peak/Null/Broad, Tuning. It is in clean condition and whilst not pristine I would give it 7 out of 10 for appearance. It was donated to a club I am associated with, and as such it is sold "as is" with a low reserve. Post and packing will be £4. I will dispatch on clearance of a cheque about 6 banking days. Cash at your risk I will ship outside the UK and the cost of post & Packaging will be £8. I will only accept Thomas Cook Money grams for outside UK buyers. The following is from the Heathkit GD-125 Q Multiplier Assembly Manual. "The Heathkit Model G-125 Q Muktiplier is used with communication Recievers to provide additional selectivity and signal rejection. Because its peak or null effect can be tuned across the receiver IF band pass, the operation of the Q Multiplier is more flexible than that of a fixed frequency IF filter. The Q Multiplier may be used with a receiver, which has an IF filter, to obtain two simultaneous functions. For example, the IF filter could be set to peak the desired signal and the Q Multiplier used to null an adjacent signal. "
Good Bidding

My TS-2000 pulls 2.6A in Rx and 20A in TX. The TS-830 with the
12VDC kit pulls the same with the filliments hot. Them CPU's
have to be fed too!

Jim

PS. I have 'em both side by side on the OP desk, and I love 'em
BOTH!

Am I to take it the poor wireless operator was restricted to Morse
code? No wonder there were so many casualties ;-)

Is GED aware of this Steve?

Come to think of it, IIRC GED was the W/O on the Titanic, little
wonder it sank. So much for "women and children first" :-(

Best Wishes

That's one of the things that puzzles me! It's a bit like the old
valve type TV's, surely they consumed a lot more power than the modern
transistorised ones?

Cheers

# 3647. Tube lineup in National NC-190 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-15 16:46:40 UTC
From: remler@juno.com
Message-ID: <775964c0.0204150846.1eae0d24@posting.google.com>
Source record: 42525

My National NC-190 receiver has a couple of 12BA6's and a 12BE6
instead of what's shown in the schematic as their 6-volt equivalents.
I checked their filament voltages and they indeed have 12 volts on
them. The receiver doesn't appear to have been modified in any way.
Anyone else have an NC-190 with this oddball tube complement? The
power transformer must certainly be different, as the one shown in the
manual has a single 6.3v winding.

73, Rick WA6NCX

So he doesn't pop any caps or fry any other components before he finds out if the radio works or not. I like to make this assessment before I start to change or swap components. It gives me a "Base Line" so I can tell if I've made any improvements or not. Once the rado play , if it does play, I can assess what I feel needs to be mproved i.e IF, RF alingment, sensitivity, BFO etc etc.

>
> >You should change all the Black Beauty or paper capacitors as well as

> > enjoyable
>
> Really? All of them, r/r the rf deck, r/r the subassy cans, do the
> turret, etc.? Methinks the submitter has never done it, and may
> believe what he reads on the internet.

Yes, because the radio plays much much better with them swapped out. It really isn't that hard. If he doesn't feel qualified to do it then he shouldn't. It took me a few radios to realise that what the old timers say is realy true. Change 'em all! Indded in this particular SP-600 I found three paper caps in the RF deck that had completely cracked and opened up. One or two in the turret.
>
> >This makes a fantastic Broadcast Band dx machine!
>

This is a comparison to other receivers I own or have owned such as the SX-100, HQ-150, SP-200, S-108. It is a single conversion design with two rf and two IF stages. The turret design is excellent as there are no noisy band switch contacts.The dial mechanism is truly a velvet touch. 6V6 audio is great and really flat. I sometimes run the output of the detector to a 100 watt Sterio Receiver and a BIG speaker. Comparing an AM station's audio received on the sterreo (which is high end) to just the SP-600 and a simialr speaker is quite favorable. There is little difference audio wise and the SP-600 is much more sensitive.

> Really? Why might the SP-600, a single-conversion rcvr at BC range,
> excel as a "Broadcast Band dx machine"? Does yours? If so, what
> other similar rcvr with equal sensitivity is a "NOT fantastic
> Broadcast Band dx machine", and why?

It may be hard to find a "Similar" receiver to the SP-600. The number of gain stages, their placement, the overall quality of the design and construction I think is hard to beat even today.

Tony

I haven't noted the Phantom stations. I have noted that on 160 there is little Broadcast Band QRM. Much better than my NC-300 or SX-100. There's a lot of space on the dial in the SF Bay Area between 560 Kc and 610 Kc. I've heard lot's of stations in that space but no intermod. 560 is KSFO and isn't the loudest but 610 is very load. Thanks for the tip. If I encounter the problem I'll probably use the step atenuator I have in the antenna line to see if that nails it. Your right there though, that's a lot of gain to manage and it would not surprise me if a strong local could cause intermod I just haven't noted it.

Don't know about TVs, but a modern rig, adjusted for maximum smoke out
the back, will consume as much power as an older valved rig.

Source record: 42533
Cross-posted to: rec.radio.amateur.boatanchors,uk.radio.amateur

The FT-200 consumed 12A in receive and 27A in transmit, where as an FT-847 consumes 2A (Max) in receive and 22A in transmit, both 'smoking' ~100W PEP.

These are significant figures, but to approximate, in receive an 83% reduction in amps consumed, and in transmit a 9% reduction in amps consumed is observed when using transistor transceivers.

Of course, some valve transceivers may have a more comparable power requirement to transistor transceivers whilst in transmit, but the big difference will always be the larger power requirements of valve transceivers in receive.

Rick, I've got an NC-140, pretty similar
radio. In mine, the chassis layout diagram
shows all 6 volt tubes, but the schematic
agrees with the radio in that the 6av6, 6be6
and 6ba6 have been changed to 12v, and the
filament voltage does check out at 12v. The
filament winding in the schematic is 12v with
a center tap for the 6v filaments. Some parts
availability changes must have occurred in
midstream.

# 3662. Drake R7 problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-16 03:02:21 UTC
From: Marvin Born <mborn@k8xu.com>
Message-ID: <3CBB943D.88DD4310@k8xu.com>
Source record: 42540

Hello,

I am having a problem with a Drake R7. This radio has worked
fine for somethime; however,
now the display reads 96370.5 and counts down very slowly to
around 96362.1 or so. There is background noise and I can hear
the audio change when the Pass Band tuning is changed.

I assume the VCO is not working. when the Fixed/VFO knob is
pressed there is no change, when operating normally and pressed,
the display will count up when the fixed button is pressed. This
no longer occurs.

When changing the bandswitch there is not change in the display
until the 28.5 and 21 mhz positions are selected; the display
then reads 9338.1 and counts down. slowly.

The up /down duttons do not operate. Changing the Aux switch
causes no change.

When the counter button is pressed the display will go blank and
returns to 96370 when the counter button is released.

Has anyone seen this problem before and does anyone have any
ideas before I dig in.

Thanks for any help

73, K8XU

Guys,

I have a good clean S-Line 75S1 (with Waters rejection tuning), 32S1 and 516F2. All units are winged emblem and in pretty nice shape. All units are completely functional. I would like to sell the units all together but I will take offers and if buyers for all (separately) can be found, that would be OK. Pictures are available upon request. I am asking $900 plus shipping and packing for all.

I can accept VISA and MasterCard, US Postal Money Order or even cash. I would highly recommend picking it up rather than shipping. The equipment is located in northern Ohio. Reply to this message if you have questions or you can call me at 419-433-2930 from 5PM to 8:30 PM EDT. If you call outside of those times you can leave a message and I will get back to you.

Thanks ... Larry W9MDX

Hi Larry:

Thanks for the information; hopefully the filament voltage is the only thing that's different from the schematic! I had no idea that the NC-140 was so similar to the NC-190; they look almost identical and have nearly identical tube lineups.

Now it's time to find out what's wrong with mine -- the audio and local oscillator are working, the lights are on, but nobody's home. Keep your fingers crossed that it isn't an IF transformer or something amiss with that weird "ferrifilter".

Regards,

Rick

Hi Gang,
I've got a very nice homebrew linear amp I'd like to sell.
It is very well built (alas, not by me), and uses a pair
of 4-400A's. It is very well metered and self contained
(no external power supply). VERY heavy! Needs some minor
work (mostly re-soldering wires onto the main tank coil).

Asking $275. Pick-up only in Santa Rosa, CA. which is
50 miles north of San Francisco.

Steve W6SSP

More expensive. Yes! More trouble. Sometimes!
But they are handy to have on the operating desk.... Or on top of the
washing-up in the kitchen sink for that matter.

Nick.

p.s. You can always write your own operators manual.

> BFO etc etc.

One may have mistaken my meaning: which is simply that I've never
found this routine to achieve what is often claimed for it. Yes, we
bring anything up slowly at first lightoff, but not over some long
period of time, and it does not prevent anything from "popping" at
operating voltage. It is done only to prevent further damage should
something be "unhappy." Beyond this, gently, I do not see how the
other matters you desire relate meaningfully to a long Variac run-up
routine, and jovially suggest that it is a myth.

One may have missed my intended point: while you may be a remarkably
fast and efficent tech, I suggest that "a couple of evenings" and
"very enjoyable" are unrealistic (though the result is certainly very
rewarding).

> > >This makes a fantastic Broadcast Band dx machine!

My mileage varies (3 SP600's so far as may standard of comparison).
:-)

> It may be hard to find a "Similar" receiver to the SP-600. The number of
> gain stages, their placement, the overall quality of the design and

> construction I think is hard to beat even today.

One may tend to slightly romanticize the venerable beast after muscling it around on the bench for a few nights beforehand and inventing a few new words regarding certain access problems. I did note improvement with the commonly-circulated audio mods in one set. FWIW I've found my R-388 to have the best overall listening sound of my rcvrs of that era (minus any mods to either). I do admit I'd rather align an SP600 than a 388 any day. Actually, I think what people most really love is more subliminial: the two big knobs, dual dials and its massive, robust feel. Try a blindfold test for the audio, with the same spkr, and see how you may feel about it.

From: steve <g1to@hotmail.com>
Message-ID: <a9hsrj$dqk$1@news.tamu.edu>
Source record: 42612

Can anyone help me or give some advise? I am a college student who bought an incomplete radio set for $1000 (it was missing an important, hard to find cable) from Carl Konefsky nearly 2 years ago and he said he would forward the cable to me via mail (the cable was part of the original deal). Nearly a year later he finally admitted he couldn't find one and agreed to return my money if I shipped the set back. At $70 shipping out of my pocket I returned the radio. He has since sold the radio and has never done anything further than promise to return my money but never has send me a cent. He has had the radio since early last fall and no longer has it. I have plenty of emails from him promising he'd send it but nothing has happened. What can I do? I live 1500 miles away in another state. His latest excuse is he sold his camper to pay me (a couple of weeks ago) but evidently that was a joke on me too. I have his phone number (I'll give it to anyone who will help) and both I and my Dad have called him and each time he says he'll send it next or the next day or whatever... My Dad tried to help but even he gave up. I certainly would appreciate any help on what I could do next. I am going to school now and work hard for my money and all I want is to get my money back and I think Mr. Konefsky is taking advantage of me just because I'm a college student. If anyone is interested, I have copies of all the email correspondence over the course of the last nearly 2 years. Thanks to anyone who can help....Steven.

# 3684. FS - 1930's Vintage HB AM XMTR

Source record: 42613

Hello,
I have a problem with my Drake TR7A.

The sensitivity on the receiver is reduced considerable on the higher bands.
When I push the cal. switch the S-meter should show S9 on all bands
according to the service manual.
On 80 meter it is almost correct.
But on 10, 15 and 20 meters the S-meter moves only a little.

Has anyone seen this problem before, and does anyone have any ideas where I
have to look ?

Thanks for any help!
73,
OZ5ZD

Source record: 42614

I did one of these about five years ago. I don't remember anything special. Just did the usual electrolytics and beauties. Five kc's is a little narrow for AM but there is a simple mod to make it 6 or so by juggling the values of the coupling caps and resistors on the bandwidth switch. Bear in mind I often can't find my glasses either! I'm kind of sorry I sold this particular receiver. It was at a time when I could not find any AM transmitter at all. Happy capping.

Well, yes and no. They consume less power than an older Caddie. Almost all of the "wasted" energy is converted into heat - makeing a total of 100% used. If you are trying to heat your house, it does not matter if the heat comes from a vacuum tube or a electrics baseboard heater.

it might make a difference in the summer when you would normally run your air conditioner. And, they consum less energy than driving downtown to see a new movie. They also consume less energy than a large bus driving down the street with one passenger in it.

I just purchased a V8 truck to replace my V6 pickup. Gas mileage is 10% lower. I made up for it by staying home from work 1 day per week.

If you shipped the radio back via US Postal (the ONLY way I ship these days), then simply call your local MAIN Post Office and request a fraud reporting package. Ya just fill out their form, attach documentation of why you feel mail fraud has occurred, and Mr. Konefsky will get a nice little notice in the mail.

This worked VERY well last year getting money for a defective radio I had to send back. The DAY AFTER he got the Post Office notice, the payment arrived!

Good luck.

Dave

I did one a few months ago. Don't recall anything very special about
it. Most of the caps are easy to reach. I did unbolt and pull free the
selectivity switch to make it easier to get at some of those caps.
Changing the selectivity caps department helped. Replacing the audio
amp cathode bypass cap made a _big_ difference.

I considered pulling the crystal oscillator module out and re-capping
it, but others who had done it said it was very difficult, and, if the
oscillators were working OK, there wasn't much to be gained from it.

That's a nice radio, Josuha. Definitely worth the time and energy of a
recap.

I need to replace the 4section loading cap in my Valiant. Its a multi section silver mica with the values of 300, 600, 900, and 1200mmfd. I want to replace it with seperate caps of these values. I have posted this on various sites with little or no response. A couple of questions......can I use a different type of cap, doorknob for instance and if so where can I find what I need. Any one out there have these.
BTW, Im not sure of the voltage but believe it should be at least 2500 volts.
Thanks....you folks are my last hope!!!!

Hi Bill,

You might try some regular mica caps or even ceramic caps that have a higher current rating
than just the small ones. The voltage at the 50 ohm point is not that high. A few hundred volt
ratting will probably work ok. The doorknobs are an overkill. If it was on the plate side then
they would be the thing to use.

They definitely consume more juice and power than a boatanchor,
and are a whole lot more finicky than an intermittent one.

As for the op manual, about the time you think you have the
table of contents wrote, you get a whole pile of papers that say
you owe everything you ever did for the last ten years because
you spend too much time working, and need to finance the party
with her new bloke!

Where can I find back issues of Ham Radio Magazine? I'm mainly interested in 1970's and 1980's issues (specific articles).

Thanks,
AB

# 3705. K6KPH OTA for International Marconi Day (fwd)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-17 04:07:36 UTC
From: Jeffrey Herman <jeffreyh@hawaii.edu>
Message-ID: <Pine.GSO.4.33.0204161806420.24111-100000@uhunix2>
Source record: 42633

QTC from "KPH Dick." // Jeff KH6O

---------- Forwarded message ----------

K6KPH ON THE AIR FOR INTERNATIONAL MARCONI DAY

The Maritime Radio Historical Society is pleased to announce that
K6KPH will be on the air on 27 April to participate in the annual
International Marconi Day commemorative event.

International Marconi Day takes place each year on a weekend
close to the birthday of the great radio pioneer Guglielmo Marconi.
The event is organized by the Cornish Amateur Radio Club which
offers awards to stations in various classes. See their Web site at
<http://www.users.globalnet.co.uk/~straff/> for details.

K6KPH uses the original transmitters, receivers and antennas of
famous ex-RCA coast station KPH. The transmitters are located at
the transmitting station founded by the American Marconi Co. in
1913 at Bolinas, CA. The receivers and operators will be at the
KPH receiving station about 20 miles north at Pt. Reyes, CA.

K6KPH transmitting frequencies will be 7050, 14050 and a new
frequency, 21050kc. 3545kc may be activated occasionally to test
the keying of that transmitter.

The 3.5, 7 and 14Mc transmitters are 1950s vintage RCA "L" sets.
The 21Mc transmitter is a Henry 5000D-HF. Power output will be
1.5kW on all frequencies. Antennas are a double extended Zepps
on 3.5 and 7Mc, H over 2s on 14 and 21Mc.

K6KPH will begin operations on 27 April at 1700GMT (1000PDT).

The actual International Marconi Day event runs from 0000 to
2359GMT, 27 April.

Commercial practices and procedures will be used on all
frequencies to give amateurs the experience of working a real
coast station. Messages will be on hand in the message rack for
those stations that inquire QRU? during their contact. All operators
will be commercially licensed, many ex-commercial ops from KPH,
KFS and other coast stations.

K6KPH QSLs and reception reports may be sent to:

Ms. DA Stoops
P.O. Box 381
Bolinas CA 94924-0381

USA

Special Note: KPH will be on the air on its original commercial frequencies for the third annual "Night of Nights" on 12 July 2002, the anniversary of the last commercial Morse message in North America.

KPH and K6KPH are operated by the Maritime Radio Historical Society in cooperation with the Point Reyes National Seashore, part of the US National Park Service.

>my rcvrs of that era (minus any mods to either).

Trouble is, the R-388 (51J3) has no selectivity options, except for the xtal filter (not much use on AM). The SP-600 could use another setting or two in among the 3, 8, and 13 KC, but those settings sure are great. A local adult oldies station on 13 KC can almost pass for FM.

> Actually, I think what
>people most really love is more subliminial: the two big knobs, dual
>dials and its massive, robust feel.

And don't forget the SP-600's great looks -- cool and mean without being ugly.

Best mix of looks, performance, and *feel* is the Racal RA-17, but its audio will never win any prizes. 73, Mike K. AA1UK

# 3713. FS: two Tempo One's and one p/s

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-17 13:11:06 UTC
From: k5dh@raytheon.com
Message-ID: <Kvev8.707$Bd4.4983@dfw-service2.ext.raytheon.com>
Source record: 42641
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

For sale:

Two Tempo One HF xcvrs and one PS/One power supply / speaker.
They are both scruffy, the cabinet paint is really ugly, but
cabinets are not dented/rusted. Front panels show a fair bit
of wear and some scratches, but they are not "trashed". Both
rigs are dirty inside, but it looks like mostly dust and lint
rather than "grime". One has all four 10m xtals, the other
has three 10m xtals (lacks the 29.5 segment). These do not
appear to have been used on 11m CB. The rigs have NOT been
tested. Working condition is unknown, although I was told
they were at least "operational". One rig has a small toggle
switch added on the lower part of the front panel, reason for
this is unknown. PS/One cabinet is also badly scratched up,
but not dented/rusted. PS/One is dirty but not grimy. One
PS-to-xcvr cable is included. I can supply a PDF-format copy
of the manual and schematic on a CD-ROM if you need it, and
also the service manual (which isn't much, but it's free).
This gear is offered as-is. Expect it to need repair work!

Offered as a package: $125 plus shipping

73,
Dean, K5DH

>

Yeah, they are identical through the mixing stages, and again in the audio amplification. The 140 has a single IF with switchable regeneration
for selectivity, and it lacks a product detector. The division of labor amongst the tubes in the detection section is a little different. Also no VR.

## 3715. Tektronix 555?

Newsgroup: rec.radio.amateur.boatanchors

Does someone have a schematic for the power supply section of the Tektronix Dual Beam Oscilloscope. The scope came with a separate power supply. I just bought the power supply hoping to convert for use as a power supply for a tube amp. Before bringing it up on a variac, I'd like to have the schematic lest something gets destroyed.
Thanks

Call Tek. Honest, they still have manuals for these things, and they are
excellent at supporting them.

And I think using the outboard supply for an audio amp is probably a bad
idea since you mostly just get a lot of 250V, but it's your box.

> to achieve what is often claimed for it. Yes, we
> bring anything up slowly at first lightoff, but
> not over some long period of time, and it does
> not prevent anything from "popping" at
> operating voltage.....

Speaking of popping at operating voltage, another
bit of advice about the SP-600: You may be tempted
to "solid-state" the rectifier tube -- DON'T!
The increase in B+ will pop those little 250-volt
paper capacitors like firecrackers.

Speaking of which, yes, it is definitely adviseable
to replace all of them, particularly the screen
bypasses on the RF and IF amps. This means taking
the RF deck off its mounting on top of the bandswitch
turret. Use EXTREME care in disengaging the spring
contacts on the RF/Mixer stages from the turret
posts that they mate with. Before moving the RF
deck, turn the bandswitch to a position halfway
between bands. Then lift the deck STRAIGHT UP
until the contacts are clear of the turret posts.

I also liked it as a BCB DX and SWBC machine.
You don't find two stages of tuned RF like that
anymore. It also worked fine as a monitor on
a local 6-meter repeater in slope-detect mode.
It had to be retuned to the output freq every
6 months or so, but other than that - FB.

One thing that's a bit dissappointing is the AVC on CW. Of course back then in the transition from AM to SSB fast attack slow ags weren't very common. I think the "SSB Adaptor" philosophy was in vogue and the adaptor was given the responsibility of AGC and Product Detector. I was able to mod the agc of an NC-300 with just a small diode and about a 1 ufd cap on the agc line (ala NC-303) . This didn't do much good on the SP-600 and I haven't figured out why yet.

Ditton on the solid state rectifiers. Not to mention the fact that B+ is instantly available to tubes whose heaters are not yet up to temperature. Not sure what that would do.

Tony

# 3726. Complete Navy Station For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-17 20:29:54 UTC
From: Keith Densmore <densmore@idirect.com>
Message-ID: <ubrmjfntno1hf5@corp.supernews.com>
Source record: 42454

Selling a complete 500+ Watt Navy based HF radio station, 2-30 MHZ.
Supports Independent SSB, USB, LSB, AM, CW, and RTTY.
The station consists of three receivers, low power exciter, linear amplifier, power supply, RTTY converter, and two teleprinters. Also to be included are two monitor scopes and digital frequency counter. As well, I will also offer an LC bridge, frequency generator and VTVM. All cables, plugs and documentation is included. I also have a project Harris RF-110 1000Watt ++ amp. clone that can go as well.
This was my station until it went into heated storage about a year ago. Descriptions are to that point in time.
Exciter T-827 excellent, great sounding radio, uses mech. filters.

Amplifiers TMC PAL 500, 2X4CX350's full output plus spares
AM-3924B project 2X4CX1500's, 8122 drivers by
Stewart Warner.
Receivers
SRR-13A--1950's AM/CW lots of filters, excellent, retubed, and re-aligned.
FRR-59A--60's 63 tube monster by National--fabulous radio, realigned and tubed. Actually 3 radios in one., 2 decks.
R-1051B--70's ISB etc. very good operational.

RTTY
URA-17 Converter, excellent
Mite Teleprinter, complete might need repair.
Model 28 KSR excellent beauty with a box of books, paper

USM-17B Scope, URM-25 Sig gen, and USM-207 eight digit counter to 500 megs.
All fully operational.

A pix of some, but not all this gear can be seen at
http://webhome.idirect.com/~densmore/station.jpg

Because of the weight (800 lbs) I will offer this as a package, pick up only, located just east of Toronto, Ontario.
2500.00 USD
You may check my seller rating on **** under signalgem

I am interested in a FT-1000MP in part trade, nothing else. Serious inquiries only please.
Thanks, 73

Not only was nothing "bothering" me, but one may mistake points for
emotions if they be a touchy-feely type, a rather behaviorist (if not
untrusive) approach to communications. I am not interested in how
anyone feels, how anyone may think I may or may not feel, nor anything
else irrelelvant to informational or positional communication online.
I believed several of your posted points to be inaccurate, and said so
a second time another way when you appeared to dodge or misread them
them the first time around.

That is quite interesting. Do you know of if
the program is available for download?

Also, does anyone know if any Enigma machines
are in private collections?

The only one I ever saw personally was in an
exhibit at the Smithsonian in Washington, DC
some years ago.

(I don't know if there is one at the NSA's museum.)

There was a privately owned Enigma machine on display in the flea
market at the Dayton Hamvention a while back. It wasn't for sale.
I think it was at the key guy's telegraphy booth (W1FK?)

That was the first and only one I've seen.

This must be SP-600 week.
I've had the experience of doing a complete recap and re-resistor
of a few of these behemoths. My favs are the -17 and the -21.
After installing modern tolerance components, the RF tuning and limiting
(AM)is very smooth and has a linear response to alignment. Once cleaned
and lubed, the mechanical drives are silky. While I don't have any real
emotional ties to any particular brand or vintage of receive engines, I
do find a well re-done SP-600 very enjoyable to use when I'm in the mood
for some fine business shortwave listening.

Source record: 42467

In a vintage 70s (?) horror movie I saw the sheriff's dispatcher lady using a D-104 mike with a transmitter (?) that seemed to have an old green Hallicrafters dial, like an S-40 or SX-42, but not the full 180 degrees of the SX-42, more like the older sets. The panel also had som big colored indicator lights on it, no doubt cobbled up by the Hollywood props department. Another big black box would have been the RX, but I couldn't make out much on it.

Didn't catch the name of this flick -- it featured a Rhode Island town called Ptter's Bluff, inhabited mostly by zombies restored to lie by the local mortician. The handsome young sheriff was about the only guy in town still on his original life. The townsfolk grew the population by killing off errant tourists for the moritican to restore. We aren't that desperate in Maine just yet :-) --Mike K. AA1UK

>Yes, but its limiter does well, as a tradeoff.

What I really like is the adjustable limiters on the R390 (A) and HQ-180 --
select yourown tradeoff between noise and distortion.

>>A local adult oldies station on 13 KC can almost pass for FM.
>
>What is it, Mike? I'd like to try to pick it up a bit further west of
>you. (I won't ask what "adult" oldies might be<BG>, I hope you mean
>Matt Monro and Sam Cooke or some such decency, not Larry Flynt sings
>"Linda Loves Lucy").

Was Big Bands and Sinatra, but is now more soft stuff from the 60s and 70s.
Station is at 730 KC in Brunswick, ME, goes to low power at night.
Also try 1490 KC, they're weak here but probably closer to you. They still do
true adult oldies (an "adult" is anyone old enough to be your parent).

>> And don't forget the SP-600's great looks -- cool and mean without being
ugly.
>Little children have remarked that it looks powerful and somehow occult. :-)

I think they'd be great in sci-fi and horror movies! But maybe don't look
military or tech-nerdy enough. 73, Mike K AA1UK

# 3742. Galaxy RV5 VFO

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-18 03:59:45 UTC
From: ".Bill :-)" <TheRealExray@netscape.net>
Message-ID: <3CBE44B1.D3EE60F@netscape.net>
Source record: 42470

It looks like finding a schematic for this unit is nigh impossible.
Anybody have any tips or recollections about its use with a Galaxy V Mk
II?
My problem is that it induces A LOT of ripple somehow when its
connected, even when the rig is still on its own VFO (solid state). The
previous owner apparently attempted to tame it because all of the wires
have been replaced with shielded cables, extra bypass caps added, etc.
Am I correct in understanding that it is different from the VFO assy in
the original Galaxy 5? Different tubes?
Somebody, somewhere will recognize this problem. I hope he reads this
newsgroup :-)
TIA,
Bill WX4A/KP4

# 3754. SX-28 questions again

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-18 15:49:14 UTC
From: cdenker <cdenker@rochester.rr.com>
Message-ID: <Xns91F4784578D6Fcdenkerrochesterrrco@24.24.0.22>
Source record: 42481

Here I go again.
I'm working my way through recapping an SX-28 and have a couple simple questions.

1. I'm working on the audio section, going after the wax caps. After removing the Bass Filter choke (CH2), the bottom of it looks like black rubber; is that normal or has this thing melted down? There's only a small mark on the case where it was mounted so I'm assuming it was never oozing when in place.

2. Currently, there's no audio output except a very faint hum, that doesn't vary, and no hint of signal reception. When I started, it hummed very loud, and it was able to get MW signals. The electrolytics have been replaced and that's when the output disappeared. I've also done a few of the easier to get to caps, and cleaned up the band switch and tone controls. Is this a sign I've done something wrong? All the caps I've pulled (except the electrolytics) tested not too far off rated values, so I'm wondering how many are really bad. I could use some reassurance I'm not going backwards! Especially since it looks like it's going to take me a year to finish. Obviously I'm a real novice at this.

3. What's going to be the best investment for troubleshooting as I get further along, a signal generator, function generator, or should I look for an old scope? I don't want to spend a fortune on any of the above. But when the SX-28 is done, I've also got a SP-600 that I'd like to tackle (probably should've done that one first).

Thanks as always for the help!

> when in place.

There should be no heating current going thru an audio choke.
The stuff may be a spacer to keep the choke a tad up away from the steel
chassis.
That improves the Q a tiny bit.

>
> 2. Currently, there's no audio output except a very faint hum, that
doesn't
> vary, and no hint of signal reception. When I started, it hummed very

> and it was able to get MW signals.

Not unusual, I often break things while fixing others. You should be able
to
pinpoint the problem by injecting a little signal.. For example, touch each
6V6 grid with a screwdriver and or finger. That should make a faint click
and or hum in the speaker. Do the same at the grids of the preceding audio
tubes.
If it doesnt hum/click, you've narrowed down the problem to around that
stage.

The old capacitors may havee tested close to original values, but how about
leakage?
It's a rare wax cap that is okay after 50+ years. A few no doubt have been
kept
in Arizona, but most have been inn damp basements for decades. Keep the old
caps--
if you're ever lost in the wilderness, just squeeze the water out of them to
drink,
then light them to attract the search planes.

Don't forget to do all the caps down deep in the RF section. If you don't,
Murphy's law will dictate that they'll short out on you a bit down the road.

Regards,

George

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 21st 2002
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

SEASON PASS + Advance Discounts

A sellers discount season pass is available which
offers a 33% discount. See the advanced registration
form below for full seller info.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all

sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

What you seek doen't exist per se. The original DC-driven aircraft supplies were impractical for civilian use or conversion, and a homebrew supply for ham use is customary and needed. You need to actually build one (simple, and requires transformer iron and work), to supply all 3 voltage requirements. That is what this hobby is all about. The final plate supply is serious HV and needs to be designed and assembled with good construction practices. There is a good suggested schematic for one in Surplus Conversion Manual (#2 IIRC), as well as helpful info on the ART-13. Hundreds of guys built these supplies, as both used and unused surplus ART-13's were plentiful and very cheap in the late '40's - late '50's. I have this info if you serious about building a supply and getting the rig on the air.

No idea. Didn't stick around for the ending or the credits. Never heard of Jack A. either.

Don't know if the movie was really that old, or whether the old telephones and cars were trying to give the appearance of a town that was 20 years behind the times. But the newer cars were 60s models with real grilles. --Mike K.

> I doubt it but I'll try some.
> Tnx,
> Bill

Followup:
Yep, that worked...almost. It cured the problem when the external VFO is active in any mode but when its in standby it still hashes up the signal using the internal VFO.
In the standby and xmit mode, the rig's internal VFO is NOT routed thru the switch on the external one. However, in xmit there is no ripple, but in standby there is. Seems like maybe the external VFO circuit is generating garbage when its supposed to be biased off.
Not sure if I even have the correct tubes in there...6EA8 and 6CM6. Can't find any info. Two 6EA8s like in the Galaxy V No-Mk VFO won't work...output is waaaay down.

It might be some sort of fungus/moisture proofing. My choke and AF xfmr is covered with black gooey stuff that someone applied (it might even be tar) in an attempt to seal it against moisture.

They did stuff like that in the 1940's.

Joe, W1GFH

Please excuse the cross-posting, I'm really not sure where's
the best place to ask.
I'm looking for data - pin out, max ratings, typical
operating conditions - for these old tube types:

CV25 (also called 4242C or VT4C)
CV266 (809)
CV622 (802)
CV704 (RK20-A, 5B-600A)

I've tried web and newsgroup searches without success.
Email me direct if you like, or if this is off topic for
this group.

Thanks a mil

Dave McDonald

I don't have the specs to hand but can help further with equivalents
from my old "Service Valve & Semiconductor Equivalents" book
(published by RSGB in 1967).
CV25 : ES85 (AEI), 424A (STC), 242C (Am), UE311 (Am), 211 (Am)
CV622 : 802 (Am)
CV704: RK20A (Am), CV624
Now for CV624 we have : 804 (Am).

Where Am must be American Manufacture (these days we'd say "USA").
and, of course "valve" = tube.

Don't forget to check for the possibility that the Icom blanker could be broken.

Ed

"AB Brown" <abbrown@nospammail.com> wrote in message news:a93aas$68n$1@slb1.atl.mindspring.net...
Currently, I am using two amateur radios for communicating: one is the Icom 718 and the other, strictly for 10 meters, is an older Realistic HTX-100. I have used the HTX-100 for about 5 years now and I just obtained the Icom less than 6 months ago. I am puzzled by something though that I was wondering if anyone could address- the noise blanker on the HTX is FAR superior to the one on the Icom. I am wondering why? The Icom was a lot more expensive and I just figured it would have a better blanker. It has AF DSP option, which I tried, and was disappointed. In every case on 10 meters, the HTX receives better due to blanked noise effectiveness.

I doubt I could internally modify the Icom's blanker for better performance so I am wondering if I could add an external, synchronous (or other ?) type noise blanker at the antenna input. I have read a few things about this type of blanker and, apparently by using noise generators, you can match the phase of incoming noise and cancel it out. Any suggestions for a blanker, either internal or external? I understand the synchronous type is better at lower Mhz, but will it work for 10/15 meters?

I believe the main sources of noise at my QTH are computer (of course) and pole transformer noise. The computer noise is easily solved (by turning off my monitor) but I have experienced the transformer noise for many years, and the HTX blanker always nullified it.

Appreciate any suggestions from the groups.

Thanks,
AB

# 3770. Query on EF Johnson Challenger Tx.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-19 00:58:07 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3CBF6B9F.EDCE501@erols.com>
Source record: 42398

I just picked up a couple of Challengers to support the one I have on the air. Along with these tx's was a large data folder the previous owner had accumulated. In the folder was the QST review (DEC 59) of the unit. The block diagram and the accompanying text indicate a 6AU6 oscillator tube. The actual manual, and all my units, have a 6DS5 (think that's right). Might anyone have any info on this apparent change in design? The 6DS5 is a kin of the 6AQ5/6005, which puts out a bit more than a 6AU6. Just curious?

No problem.. This is the proper use of cross posting. One
should use crossposting to a few closely reverent newsgroups
rather than sending individual posts to each.

Good luck with your project. I replaced the wax caps in the main deck of my SX-28 but I haven't got the courage yet to tackle that rf section. I used a 2225 scope and a signal generator. I think that's a minimum set of tools.

# 3773. Re: WTB: Collins ART-13 power supply:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-19 03:47:43 UTC
From: WF2U <mbendror@starband.net>
Message-ID: <VrMv8.9988$mj2.3185517616@twister2.starband.net>
Source record: 42401

Due to the dwindling number of surviving ART-13's, nowadays we avoid "converting" them, thus preserving irreplaceable military/technological historical artifacts. The dynamotor supplies required to operate the ART-13 (DY-17/ART-13) are not plentiful but can be found. Robert Downs, WA5CAB (his e-mail address is RWDowns_WA5CAB@compuserve.com ) used to have them for sale, I believe he still has some left. He can supply the connectors, too. The dynamotor requires 28 VDC input at 35A. Most of us use a "brute force" 28V supply - regulation is not important - or a 24V charger and 2 12V car batteries in series to operate it.
The only original AC input power supply was made for the Navy, for shipboard installation of the ATC-1, which is Navy for the ART-13... They are extremely - repeat - extremely rare. If found, these are worth much more than the transmitter itself!.
Of course, the other alternative is building a supply. Schematics for these can be found around. One of the better supplies was featured in Electric Radio magazine a coule of years ago. (Bear in mind that proper metering in the ART-13 requires a resistor in the ground return of the high voltage).

Good luck,

73, from WF2U

Hello
I've just been given some Centralab thick film modules, type L&N 144012 and 144013, these look like the early integrated capacitor and resistor "Couplate" units shown in my 1947ARRL handbook - does anyone have any information or references to these?
My enquiry is just out of interest as they are an early (first?) example of photolithography leading to the development of the IC.
Many thanks
John

For sale or Trade
Ten Tec Omni 6 with Option 1 upgrade (DSP chip and button overlays).

Just back from Ten Tec. ($176 worth of work) Complete alignment and update of radio. Installed TXCO. Radio is right on Freq, and sounds great.

Works great looks great. Has all filter positions filled including the narrow slot with Ten Tec filters. Nice clean radio. Only blemish is a very small nick in the front top edge of trim. Very hard to see less than 1/16. I tried to photograph it but could not get it to show up. You really have to look for it. Original Manual

Also have the matching Power Supply/Speaker model 961, and the 705 desk mic. Both in same excellent condition. I also have an unopened Heil adaptor for the Ten Tec rigs, that will be included.

I have owned the station for 5 months and have used it regularly. Great CW rig, and the DSP works beautifully.

I have pictures of the station that I can email.

Price $1650 Plus shipping from NC 27587.

I can accept Paypal.

Will consider trades of nice clean Collins S-3 line, Yaesu 1000MP, Kenwood 950, 870/with ps, Icom 775, Drake C-Line/L-4B, Will consider others.

Thanks and 73

Message-ID: <exUv8.7$7_1.271426@cacnews.cac.cpqcorp.net>
Source record: 42406

I have some BC611 crystal boxes BX-49 available; 12 channels, range 4035 to 5500 kHz. Two crystals and two coils per channel. The wooden box and its contents are in fine condition. On the outside of the box are 12 holders with small labels in them. On the labels the channel frequency is written but the labels suffer from old age. Price is US$35; shipping cost is US$20. More boxes in a package makes the shipping cost more efficient. I'm located in the Netherlands.

Nico PA3ESA

>and, of course "valve" = tube.

Those tubes must be REALLY old, like pre-1920 military/telephony jobs, since those "Am" numbers don't look familiar to this old American at all. Could they be Canadian, as in North American? --Mike K. AA1UK

IIRC, the CV-numbers are of the WW2 era when the Crown went into the
tube mfg business to assure a continuing supply. It was a re-numbering
scheme something like the VT-series.

# 3782. FS/FT Gonset Transmitters

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-19 19:20:33 UTC
From: Mikey <wb6vse@ipa.net>
Message-ID: <56_v8.21525$L1.1677878@newsread2.prod.itd.earthlink.net>
Source record: 42410

#1
Gonset GSB-100, working! Tested around the first of the year. Front panel has some chipped paint near the mounting screws, and the meter has a piece broken from the bakelite housing. Meter works great. Asking 225.00 plus shipping.

#2
Gonset GSB-100, working! This one has a new Peter Dahl transformer installed. All new filter caps and some resistors replaced. Looks very good, nearly perfect panel. All knobs original. Tested around the first of the year. Needs new dial string, as it slips on band change. Asking 350.00, plus shipping. Transformer was 185.00 from Dahl !
May consider trades on one or both units. Looking for a Gonset G-63 receiver that I would trade the lower cost 100 for. What have you?
Thanks for reading...

Source record: 42421

Hello to all,

I now have the R7 fixed. The problem was the 24 VDC power supply for the VCO. The 78L24 three terminal regulator had gone south. With no 24 VCD there was no VCO operation. Replaced the 78L24 and the radio is now fine. The regulator is on the small power supply board of the right side of the radio.

I though I would make a post with solution and to thank all to offered help.

> historical artifacts.

No conversion of the transmitter at all is necessary - that was & is
the appeal of the rig from the outset - only an external supply is
needed to be built.

Have you owned and operated one? I am asking because not everything
written in magazines by new enthusiasts or promoters is necessarily
entirely realistic, and may be over-romanticized in well-intended
enthusiasm or pride of ownership.

Even when back radical rig conversion was in vogue and ART-13's were
found unused for $25, almost no one did anything to the ART-13 except
possibly removing the vacuum relay and putting a pi-network in its
space (easily reversible if one kept the relay), and maybe making a
10M module to fit into the space originally provided for the
200-1500kc optional military module (which no one can use, and of
course not any conversion at all but a removeable addition to an empty
space).

Ergo, use of a practical line-voltage supply is not any kind of
"conversion", nor is even adding components for 10M operation, in the
exact meaning of the word. Even using an orignal connector can be
dispensed with if one cannot be conveniently found, without any sort
of butchering or conversion of the rig.

>The dynamotor supplies required to operate the ART-13
> (DY-17/ART-13) are not plentiful but can be found.

Why would one bother, friend? Masochism? Desire for an inferior
signal? Its expense, high noise, low reliability, RF hash, response
lag, greater size, greater weight, poorer performance, low efficiency,
scarce availability, high maintenance & overhaul requirements, etc.
are all greatly inferior to a simple 115v supply assembled from
ordinary, scrounged or reasonably priced parts of the same era. If
this were not compelling enough, one would require a very hefty DC
supply or massive battery bank to drive the dynamotor supply (and even
more inefficiency in the bargain).

IIRC, the ART-13 itself needs 27vdc@15A, 400+vdc@250ma, and
1250+vdc@250ma (don't trust these currents, check them). Any medicine
man can make a supply that delivers this. Typically, an original

connector (if found) is used in the original manner, except one pin (#2?), which originally turned the rig on/off in the plane, is unused (due to now having a real pwr supply switch).

# 3812. Re: Source for Heathkit Paint?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-20 16:16:11 UTC
From: "M.E." <bogus@nospam.com>
Message-ID: <3cc19153_2@newsa.ev1.net>
Source record: 42440

The outer cabinet for "most" of the Heathkits i.e. SB-101,102, SB-200,220,
etc. is Krylon "Jade green", to reproduce the "ruff" texture, spray the
final coat from over 12" away.
I did it this way, and the SB-220 I rebuilt, looked like a new unit.

# 3813. Model 19 Teletype & sundries available in Dartmouth, MA

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-20 16:26:54 UTC
From: Hardrawn <wiremill@attbi.com>
Message-ID: <3CC196FD.BE6B89A7@attbi.com>
Source record: 42441

Would you consider driving to New Bedford, actually, S. Dartmouth Mass. for a clean model 19?

It is a model 19 that was purchased as a spare some 15 years ago. It has sync motors and the MASSIVE, thyratron regulated, loop power supply.

There is also a typing, keyboardless, reperforator less the base with sync motor. A poorly built ST-5 TU, two rolls of paper, two rolls of tape, a spare ribbon, a decent copy of "RTTY A-Z" and a calibrated polar relay for the teleprinter.

This mini museum of communications technology is YOURS for the paltry sum of a mere $75.

Come and get it before the needs of time and space lay claim to the scrap heap.

Regards,

Charles A. Days

Body handling: HTML body converted to readable text

FOR SALE:

AMECO TX-86 Classic HF AM and CW transmitter. Lovely copper chassis
and front panel. Covers 80 thru 6m ham bands. This one looks
clean and nice. It's all there including the 6146 final but I have
not tested it. Will sell for $79.00 plus shipping.
SALE PENDING
Pictures at web site (see below)

Hallicrafters SX-99 receiver
Has new power cord, case is excellent. Has some interior rust but
all dials work OK. One main knob has a chip out of it.
It is all there and these defects can be easily fixed.
No returns, no warranty - Unit is sold as-is untested.
Will sell for $109.00 plus shipping

National NC-190 Receiver
This is nifty old receiver with that classic space age blue finish.
Front panel looks very nice, but some of the knobs look crusty and
need cleaning. Appears to be all original with no modifications.
Receiver is non working but it is all there, and will clean up
nicely. Will sell for $125.00 plus shipping

Harvey Wells Bandmaster Senior TBS-50C all band AM-CW transmitter In
very good condition, complete and untested. Reported to be working
when last used. No VFO or power supply. Front panel shows really
nicely. Will sell for $135.00

Heath HD-15 Phone Patch. Unit is in excellent condition with all
original knobs etc. Will sell for $22.00

Yaesu SP-901P Phone patch / Speaker Accessory
Perfect to round out your FT-901 line. Unit is in excellent shape but
needs two scratches touched up on the top. Front looks great,
including the original knobs, meter etc. Will sell for $45.00 plus
shipping

Several more command sets:
ARC-5 series military receiver Model R-27. Unit is complete and in
good shape. Will sell for $35.00 plus shipping

Modified ARC-5 receiver. Inside looks original - front panel has been
tidied up and painted. Has BNC connectors. Will sell for $27.00 plus
shipping.

Homebrew transmitter made from a nicely modified ARC-5 transmitter - conversion job. Will sell for $25.00 plus shipping.

BC-459A Transmitter
covers 7.0 - 9.1 Mc. Black case. Rotary coil etc. are in good shape. One small cover is missing - Bottom cover and case are both present and in good condition. Otherwise looks to be complete and in very good
condition. Will sell for $35.00 plus shipping

BC-459A Transmitter - covers 7.0 - 9.1 Mc. silver case. Rotary coil etc. are in good shape. One small cover is missing - Bottom cover and case are both present and in good condition. Otherwise looks to be complete and in very good condition. Will sell for $35.00 plus shipping

WW2 British Mark 2 straight key. Missing two screws, but otherwise clean and in nice shape. Contacts are still in very good shape. A few imperfections, but will polish up and restore nicely. Will sell it for
$42.00 plus shipping

NYE CO. Paddles for CW - very smooth feeling long-handle black paddles, in near mint condition. Will sell for $45.00

Straight Key - for the CW buff who wants to be ready for straight key night. Also useful for beginners learning the code. This has locking bar for tuning and is an adjustable key with nickel silver finish. Will sell for $25.00 plus shipping

TS-175 Frequency Counter - exceptionally nice military unit in near mint condition with original chart. covers 125 kHz to 20 MHz.

Will
sell for $95.00 plus shipping

LM-10 frequency counter - 'Type CRR-7402B crystal calibrated frequency indicating equipment' with original chart book, in very good
condition. Will sell for $55.00 plus shipping

MFJ 204B Antenna noise bridge with original manual.
Will sell for $45.00 plus shipping

Daiwa two position Low-loss antenna switch Model CS-201. Will sell for
$19.00 plus shipping

MFJ-941D Versatuner II antenna tuner in excellent shape. Matches about
any antenna to your HF rig. 300 Watt antenna tuner that covers everything from 1.8 - 30 MHz and includes meter, antenna switch and a 4:1 balun. Meter shows SWR, forward and reflected power - antenna switch lets you select 2 coax lines, random wire/balanced line or dummy load (direct or through). Efficient 12 position airwound

inductor gives lower losses and more power out. Has 4:1 balun, 1000 Volt capacitors, and a beautiful aluminum cabinet. Will sell for $59.00 plus shipping

Knight TR-106 with V-107 VFO
Excellent looking Knight 6m AM transceiver with the matching VFO. Also
comes with the original, blue 'Knight' labelled Shure hand microphone.
This radio can operate on either 12V DC or 115V AC. Comes with 115V AC
cable. Otherwise complete and has very nice appearance. Sold as-is. Comes with a copy of the manual.

Aerotron 600 VHF FM base radio transceiver. Includes original Shure microphone, built in 115V AC and 12V DC power supplies. Comes with AC cable. Uses venerable 6360 driver and 6360 tetrode final tubes for a power output of 10 watts. Sold untested, as-is with no warranty and no
return. Will sell this complete set for $25.00 plus shipping

# 3820. Re: WTB: Collins ART-13 power supply:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-20 21:29:40 UTC
From: WF2U <mbendror@starband.net>
Message-ID: <u5lw8.10440$8b1.3408541753@twister2.starband.net>
Source record: 42348

I'm aware that most homebrew AC input supplies don't require any conversion of the ART-13.
I happen to use my ART-13/BC-348 transmitter/receiver combo (also known as AN/ARC-8) with the dynamotors (in the receiver as well), from a 28V 50A mil. surplus power supply. In fact, the DY-17 is one of the quieter dynamotors. There is no sign of RFI from it, neither from the receiver dynamotor. As far as military radios go, I like to operate them in original condition and as intended to perform as such. Last year I bought my third ART-13 which came with a very well designed and built homebrew AC power supply. Unfortunately, the original connectors were replaced on that ART-13, so I'm in the process of converting it back to original condition with connectors from a donor ART-13 carcass... All my military radios are run from the original power supplies/dynamotors, using the proper primary voltage of 12 or 24 V DC... Since most military operating was done under noisy conditions, headsets were used, so in the field it really doesn't matter that there is dynamotor running in the background...

One person's fun may be another person's noise ;-)

BTW I like that AC supply for the ART-13 - the 2 cooling fans on it sound almost like the DY-17!

73, WF2U

# 3821. Radio Switch parts needed.

> By the way, if you want to read more about how the code was broken
> using world's first computer, check

This is taking us even further afield, but neither Collosus nor the Bombes used in breaking the Enigma codes were computers, certainly not in the modern sense. Collosus was a sort of specialized sequence-controlled calculator. In any case, Konrad Zuse in Germany had much more general-purpose (relay-based) binary digital computers running much earlier, in the 1930s. See http://ei.cs.vt.edu/~history/Zuse.html for more.

# 3833. Heathkit GC-1A Phone Plug for Headphone/Spkr Modification?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-21 04:58:14 UTC
From: Wayne Watson <mtnviews@earthlink.net>
Message-ID: <3CC246E4.B454360F@earthlink.net>
Source record: 42361

I have a HK GC-1A and it has a 1/4" plug in the back to output the audio to a microphone. I would
like to modify it so that I can plug a jack into it that goes into the sound card of my computer. I
have some software that samples the signal every ms or so. However, I would like the sound to still
play through the speaker. Anyone know if there's a new plug of mod I can make to the present plug
that will allow me to do that?

Source record: 42364

I have a Racal 1792 with a serious mystery fault, and I would be very grateful if anyone could help me. Receiver performance is fine, but storing frequencies in memory is a fatigue. Sometimes the parameters are properly stored, but most of the time the memory channels return a big mess of random settings and a frequency display that shows random numbers, and some digits don't appear at all. The display shows 'fault' as well. Any help would be much appreciated and gladly acknowledged!

# 3838. FS: Homebrew AM Transmitter & Some Mics

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-21 10:48:13 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <8965cu8raigs9q2jb7losfvepabg8fiumr@4ax.com>
Source record: 42366

FOR SALE:

Homebrew AM transmitter with 1625 final plate modulated by a pair of
5881 tubes. Made from a nicely modified ARC-5 transmitter - conversion
job. Has an older style 4-pin mic input, gain control etc. etc.
Appears to be made for 40m and has final tank of 17 turns silver
plated copper 16-18 gauge wire on a 2" diameter ceramic form.
Picture available on request
Will sell for $25.00 without the two 5881 tubes or for $35.00 with
them. Shipping additional.

Shure 444
Desk mic with PTT bar and locking switch. The best sounding mic for
SSB on the older Drake 4 line equipment. Excellent for use with older
tube type transmitters
Picture available on request
Will sell for $29.00 plus shipping

Turner 250 Desk microphone - beautiful silver case with PTT bar and
locking switch for those long transmissions! Excellent match for all
of the old 'boatanchor' AM and SSB rigs.
Picture available on request.
Will sell for $29.00

Shure 202 Mobile microphone - gray, sharp appearance with PTT,
excellent condition.
Picture available on request.
Will sell for $25.00 plus shipping

Icom mobile microphone, low impedance, black -
Picture available on request.
Will sell for $15.00

Heathkit mobile microphone, low impedance, black -
Picture available on request.
Will sell for $15.00

# 3839. Radio equipment on the Kon Tiki raft

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-21 10:49:18 UTC
From: arnoldg@c2i.net
Message-ID: <3cc298f7.11839856@news1.c2i.net>
Source record: 42367

Thor Heyerdal died in his home in North Italy a few days ago. He is famous for his Kon Tiki expediton in 1947 and also for his Ra expeditions in the seventies.
There is even a movie about the Kon Tiki tour. I wonder if anyone know what kind of radio equipment they used on the raft?

Best regards,

Arnold Goks&#65533;yr
DEMOSTENES - N6899 Balestrand, Norway

National ran an add showing his receiver to be the NC-173 with vibrator supply and batteries (of course). I don't know what his tx was. I'll look in QST and re-read the article.

IIRC the equipment was a mixture of WW2 clandestine sets and some specially
built equipment. Typical power output was 6 Watts and best DX was from
the middle of the Pacific to Oslo. Amateur callsign was LI2B.

From: Smith-Gaspard <jsmith52@tampabay.rr.com>
Message-ID: <3CC2BEDF.450B2334@tampabay.rr.com>
Source record: 42375

Greetings Arnold ...

It is with great sorrow that I have learned of the passing
of an old acquaintance and friend Dr. Thor HEYERDAHL, LY4B.

I am the builder of the radio equipment used on the RA-I and
RA-II Expeditions from Safi, Morocco to the West Indies, near
the Barbados.

While working for SIGNAL/ONE ... Division of Electronics
Communications Inc. located in St. Petersburg, Florida, U.S.A.
back in 1969/1970, I was given this assignment by Dick Erhorn,
W4ETO ... who later established ETO Technologies.

The equipment used a Heathkit 20 Meter transceiver
modified with four fixed frequency crystal channels plus
the use of the VFO. The transceiver was constructed to near
Military Standards using up graded components and
weather proofing of the printed circuit boards (PCBs).

The transceivers front panel an enclosure was stripped and
repainted using a gray military paint. Even the control
knobs were replaced with military standards.

This transceiver included a Heathkit 12VDC power supply built
to the same standards. Once all tests were performed on the
communications equipment, I added a cooling fan to the top
of the transceiver for added protection due to the hot
weather conditions expected.

The complete communications equipment was then permanently
mounted in a gray color water proof military standard
enclosure/container which included the Instruction Manual
(which I wrote for ease of operation to be used by non technical),
microphone, speaker, spare parts (tubes), and finally a
20 Meter dipole antenna tuned to the low end of the 20
Meter voice frequencies. This was designed to be mounted
from the top of the mast of the papus reed raft to the
stern.

The radio communications set once completed was final tested
on the air with great results. Before shipping to Dr. Thor
HEYERDAHL, the radio was connected to a Dummy Load and
burned in under load for seven days continuance without
any failure(s).

The same communications equipment was used twice in the
two RA voyages without any failure. After completion of
the RA-II Expedition the radio equipment was returned to
Signal/One and donated to the Smithsonian Museum in
Washington, DC. ... I assume it is still there.

For further study of this Expedition and pictures of the
radio, et al., the subject may be found in:

HEYERDAHL, Thor [c]1971 Doubleday & Company, Inc.
THE RA EXPEDITIONS

I hope this answers your question about the type of radio
equipment used on the RA Expedition(s). I do not know what
Dr. Thor HEYERDAHL used on AKU-AKU.

Do you have an address for his home in North Italy?

Best Regards,

James C. Smith W4ONO
Homosassa Springs, Florida, U.S.A.

I've just found my copy of Thor Heyerdahls Kon Tiki book and I'm looking through for references to radio. They did indeed have an NC-173, it survived the whole trip, the wreck on the coral reef, a trip to shore in a canoe - and it still worked! The batteries were charged from a hand generator.
The book also says: "Knut and Torstein were busy preparing the transmission, which was to be done partly with short wave transmitters specially constructed for our purpose and partly with secret sabotage sets used during the war."
(Knut Haugland and Torstein Raaby were clandestine radio operators during the war, and Torstein Raaby was the man who sent back the reports which led to the sinking of the Tirpitz.)

No - they've had a clear-out and found a couple of RA17s hidden under a
bench. Maybe they are surplus to requirements and being sold to raise funds?
Read the original posting again - nothing mentioned that even points to M3s.
Maybe if you had a tidy-up in your shack you might find a brain?

The memory data is stored in the A9A2 front panel board, in 2 EAROMs, U13 and U14, not the A6A2 CPU board which has the battery (a 2.4 Volt 110 mAH nicad BTW). If this battery has leaked at all it may have corroded the board in that area, and should be replaced as soon as possible.

# 3861. Modifying a Jack for a Heathkit GC-1A?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-21 16:26:18 UTC
From: Wayne Watson <mtnviews@earthlink.net>
Message-ID: <3CC2E82B.683A1296@earthlink.net>
Source record: 42388

I have a HKit GC-1A and it has a 1/4" jack in the back to output the audio to a headphone. I would
like to modify it so that I can put a plug into it that goes into the sound card of my computer and
plays the audio through the spaker. If I put a plug in the jack now, it stops the audio to the
speaker but the signal goes to soundcard. I have some software that samples the signal every ms,
and the intent of capturing the sound on the computer is not for audio playback. Anyone know if
there's another jack or mod I can make to the present one that will allow me to get both outputs
simultaneously?

P.S. I posted an earlier message on this last night but a re-read of it didn't make any sense at
all. Sorry about that.

Hello........NG.
....Does anyone need anything Picked-up or hand! Delivered.
Anything large and fragile ( everything is handled with TLC.) Specifically:
( Radios, TV's, recording equip., Speakers, Transmitters...Boatanchors.
Large musicial inst. Organs, Pianos.etc..).?
I do this every few months for a growing group of Radio, TV, Recording
musicians, Collectors, etc.

Leaving So. Ca. San Diego, Los Angeles, S.F..by the middle of the
week...Las Vegas first....Up the West coast to Portland & Seattle......
After that Back East thru the middle & southern part of the country...
Anyone need anytjing picked-up and brought back east or anywhere along the
way.?

Thanks.....
Please call the cell # first.

Need opinions:
In the near future, I'm getting rid of a Collins 51J-4 that I had installed
a removable product detector mod a few years back.
1) Will the radio garner more $$$ with the mod?
2) Or, take several hours and put back to stock?

FYI, pix at http://raq64.webpg.net/~p15218/images/51J-4/

Are you sure? I thought it was a 3V lithium battery, and should be discarded
when it hits 2.7V. Take it out and take it to an industrial battery dealer
and you should be able to get a replacement.

Bossyy -

If you could be a little more specific, it might help get some responses. For example, what modes do you want (AM/CW/SSB) and do you want a receiver, transmitter (or both) or a transceiver? Tubes or solid state?

This was a nice post. One article I remember well from my childhood
was from shortly before I got my ham license. In the January 1972 issue
of Electronics Illustrated (by the end of the year, it no longer
existed), there was an article "A 3000 Year Old Ham Shack" by Robert
Angus about radio use on the Ra expedition. I hadn't gotten around to
digging it up before your post.

It only talks of Dick Ehrhorn being responsible for the equipment.
And in the way that the non-technical articles were, it wasn't as
explicit as your post. It says that Signal One was working on a
"transmitter designed specifically for jobs like Heyerdahl's. It
was to be lightweight, compact, waterproof and reliable." But then
someone realized it wouldn't be ready in time, so the Heathkit
was assembled and modified. It even has a photo of the rig with the
fan on top in the carrying case, but no photo of the front panel.

Apparently the call was LI2B, which someone mentioned as the callsign
for the Kon-Tiki expedition. The article also mentions that there
were problems getting the license again for the RA-2 voyage, because
the phone company was objecting to third-party traffic.

"During WWII, Heyerdahl himself had been trained as a radio operator
by the British Army, first in the UK and then in Canada. The idea
was that he could then be parachuted behind enemy lines in Europe
to transmit information back to London. Heyerdahl was an apt pupil
and was dropped at least twice, once into Norway and once into the
Soviet Union, but he hated every minute of it, and has since drawn
a mental block about things electronic."

It reads like Thor Heyerdahl was supposed to be the radio operator,
but because of this Norm Baker ended up in that role, when he thought
he was only delivering the radio.

Thanks a lot to all for the interesting information on both the
Kon-Tiki and the Ra expeditions. I don't have the Kon-Tiki book, but
in my Ra book there is a nice colour photo of the Heathkit equipment.
I wonder about the transmitter on the Kon-Tiki. Could it be a simple
homebrew type with a oscillator valve and a 6L6 in the output, and
only CW mode? Or did they run AM, too?

By the way, someone here asked where Heyerdahl died. According to the
Norwegian newspaper, he stayed in a very small Italian village called
Colla Micheri. In northern Italy I think. Heyerdahl was 87 years old
and he died of cancer. However, again according to the newspapers, he
was active and in very good spirit until his last few days. The
Norwegian government will give him an official funeral, but he wished
himself to be buried in his Italian village.

Best regards,

I am restoring a SX-42 and I am now trying to get the s meter to work. I generally fix things by understanding how they work,
but this circuit has me baffled. Rather than study it anymore, I thought maybe someone with experience could explain the circuit operation to me. I know this is quite an order, as the circuit/schematic is confusing. The s-meter zeros properly and the meter functions OK in the discriminator position, but no signal strength is indicated. The AVC voltage reads about -2 on strong stations. Thanks in advance.....jack k8xx

Hello Michael and all ...

Thank you for the correction of the radio call of LI2B. It
has been close to 33 years since the event. We were also
UPI input for the press releases. At that time, Dick Ehrhorn,
W4ETO was running legal limit with a wide spaced 20 Meter
Yagi on a 90 foot boom. If I remember, he used a Rohn IV
tower for the boom. He always had great communication to
the RA Expeditions.

Somewhere, I have the original photographs of the transceiver
while under construction including a copy of the instruction
manual I wrote which included pictorial drawings for operation
and installation of the antenna. Those were fun days.

I originally was hired for receiver design engineering in an
R&D department for U.S. government contracts. After designing
a 20 Ch. servo tuned UHF receiver for the government of
Holland, I was transferred to the new division of E.C.I.
called Signal/One. There we built the CX-7.

I just found my QSL card LI2B for the RA Expeditions.

==========
Any normal relay (preferably hermetically sealed ) with a contact rating of
a few amperes will do the trick.
I have seen plastic cased relays for RF power duties in 100 W Yeas-ic-ken
transceivers not larger than 1/4 cubic inch.
However ensure that RF power does not hit the relay contacts before these
are fully closed and use all the contacts for a single duty eg don't use one
of the contacts for control purposes.
For control purposes use (a) separate relay(s)

# 3904. Re: How does SX-42 S-meter work?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-22 16:20:58 UTC
From: "George R. Gonzalez" <grg1@flash.net>
Message-ID: <aa1dag$3ej$1@laurel.tc.umn.edu>
Source record: 42332

I tried looking at the schematic for the SX-42 on 'bama,
but it's sooo confusingly drawn I couldnt follow the wires!

So this is just on general principles:

The S-Meter usually has one end in the plate, screen, or cathode
circuit of one of the RF or IF tubes.

The other end of the S-Meter goes to some voltage divider, adjusted to
give effectively zero volts across the S-meter with no signal.

When the AGC voltage hits the tube, the average tube current varies a bit.

This change varies the plate, screen, or cathode voltage, which moves the
S-Meter.

If the meter isnt moving, then it's likely some sort of AVC problem.
be sure you've replaced ALL the wax or black-beauty capacitors in the grid
AVC circuit, even the hard-to-reach ones.

If you're still only getting -2 volts with good AVC capacitors, something
is wrong in the signal path. You should see more like -15 volts with a
strong signal.

Regards,

George

Coaxial relays are the obvious choice here, but expensive and not really necessary at HF. Let's face it, all the commercial autotuners use bog standard plastic cased ones.

Personally, I would go for any big chunky single throw relay. Parallel all the contacts if it's a multipole, and do not use any spare contact sets for control purposes, there will doubtless be lots of RF on them. Assuming that the relay is not going to be sited at a point of extreme RF voltage, an auto-salvage yard should yield several contenders. Remember though, that the longer the switching elements are, the less isolation you'll have, so the more RF will get into your pre-amp when on TX.

Omron make some nice compact 250V 10A SPST relays with a 12V coil, almost ubiquitous in monitor and TV degaussing circuits. These have a BIG contact gap too to cope with any back emf off the coil, although the thermistor should mean there isn't any.

Careful choice of sequencing circuitry so there is no RF on the line when it is switched will help prolong the contacts' life.

Good luck

Alec Wood M1BNK

I believe they ran CW only. There are many references to morse code
in the book, and no mention of transmitting speech. At least one
of the transmitters appears to have been a British wartime clandestine
set which were xtal controlled and used, I think, a 6L6 in the output.
For the contacts between the Pacific and Oslo they were running about
6 Watts, probably to a wire antenna held up by balloon or kite (both
are mentioned in the book).

Small stuff: A Variac is a brand of variable autotransformer made by
General Radio. A Powerstat is a brand of variable autotransformer
made by Superior. Neither is a variable power transformer. :-) Both
are common and inexpensive as serviceable industrial surplus pulls.

times

Yes, and I would add that the S-meter is often just about the last part of the radio to work correctly. Have you replaced the old paper & electrolytic capacitors? (See http://antiqueradio.org/recap.htm .) Until the answer is "yes," I would not worry about the meter. The SX-42 has some other notorious trouble spots that you should look at. See my restoration notes at http://antiqueradio.org/halli07.htm .

> BTW I like that AC supply for the ART-13 - the 2 cooling fans on it sound
> almost like the DY-17!

:-) I suppose aboard the plane, both would be moot (actually the usual supply needs no fan added, but sometimes the ART-13 does). But I am disappointed that you are not powering your original DY-17 with the original aircraft and radiating from the original antenna and screaming into an original aircraft mike about the original enemy while wearing the correct original uniform...I mean, after all...<BG>

# 3914. Re: SX-28 questions again

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-22 20:40:07 UTC
From: Phil Nelson <philnelson@antiqueradio.org>
Message-ID: <Hy_w8.1839$iQ5.100428@newsread2.prod.itd.earthlink.net>
Source record: 42342

It's difficult, and often a waste of time, to troubleshoot a half-restored set. More than once, I have started out with a set that worked weakly at first, but started misbehaving or showing various peculiar symptoms while the job was in progress. By the time I had replaced all of the old leaky/shot capacitors, those troubles cleared up. It is worth carefully checking the work you have done up to this point, of course. This is a complex radio and it's easy to get lost under the chassis (you are using a schematic, right?).

I would bite the bullet, follow the schematic carefully, and continue replacing the old bad wax capacitors. My restoration article at http://antiqueradio.org/halli12.htm gives a detailed procedure for replacing the caps in the RF deck. This is a wonderful radio and it's worth doing the whole job while you have it on the bench.

Re test equipment, I'd start by getting a signal generator. You can often find decent used ones at a swap meet, etc., for around $25. You can use a modern radio with a digital readout to doublecheck the signal generator's output. If the desired frequency is, say, 455 khz, you can set the radio to 910 khz, and so on.

From: gspubl@tca.net
Message-ID: <3cc4842f.19972969@news.tamu.edu>
Source record: 42247

FS: Collins ART-13 HF transmitter. Physical condition on outside is about 8.5 out of 10. No mods appear to have been made. Thie inside is very clean with all original tubes. No optional LF oscillator. I don't have pictures but will try to get some in the next couple of days (have to borrow the camera). $265. Manual copy available at copy cost.

Hi All,

Thanks for the suggestions, I hadn't realised that "new old stock"
papers might be dodgy too! I'll try the suggestion of re-stuffing with
modern types, keeps the receiver looking original and avoids having long
leads if the replacements are smaller-bodied. Most of the papers in my
HRO-50 are sweating so I think I need to change them sooner rather
later.

73,

Oh well, maybe you had bad timing. Anyway, he's got some samples there
of old labels that you can print to make the new caps more visually
appealing. I use a similar process quite often in restoring old 30s
sets.
GL with ur project,
Bill WX4A

hello,

i have for sale or trade a yeasu ft-107m hf rig. 100 watts all bands.
all solid state with digital readout. covers 80-10 meters. has two places on
the bandswitch to add the warc bands. this is detailed in the manual, which
is also included.

there is a problem with the memory board. you can not store frequencys
in the 12 memory slots. this does not effect the operation of the rig, you
just can't use the memories. face is very good. case is ok. no scratches but
the feet on the bottom are not attached and it is missing 5 of the 8 screws
that hold the top and bottom half of the case to the rig. i can replace
these, but i have just not gotten around to it. i have used this rig for
psk. power supply is included in the rig.

i would rather trade this for a nice swan rig, like a 750 or 700.
something with tubes in it so i can work on it. email me with what you have.

cash price $250.00 plus shipping. will entertain offers.

thanks

Hi Larry:

Quick update -- the problem was that someone stuck an unmarked tube in one of the IF stages. It's either the wrong type altogether or badly shorted, as it killed the signal and caused the S meter to pin. With a fresh 12BA6 in there, the receiver works great! Ferri-filter and product detector are fine; in fact it's a pretty good SSB machine, though a bit drifty on the higher frequencies.

Thanks again for your help,

Rick

# 3951. FS coils-forms-etc.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-23 21:32:09 UTC
From: Lou <tech@dp.net>
Message-ID: <aa4kio$ket$1@news.dp.net>
Source record: 42279

FOR SALE:

I have a few, 6 to maybe a dozen or so - coils out of what I think were ARC 5s or some other similar looking piece of equipment. They are/were the white forms about 3" or so in diameter and about 3 to 5 inches high. I believe they plugged into the board or were screwed down. IF you need these to repair said stations or to use for homebrewing, I'm letting them go cheap. Probably cost more to ship than anything.

Also, I have a couple copper wire coils. Appear to be out of or made for a homebrew transmitter. The coils are made of what I believe are about 10 or less gauge wire(?). Maybe even say 4-6 gauge. They are thick. One is about 6" in diameter and about that long. The others are about half the size..... Any interest in these? Same deal as the ones listed above.

One last thing, is a couple cabinets/cases. IF in need of something like that to "house" your project, let me know. Those are going cheap too. Sometimes, housing a project is half the battle. Two of them could also be used for a QRP kit. It would fit the QRP rig, antenna, log book and who knows what else.

> Most Enigmas are in private collections. The last one I heard of was
> sold for $30,000.

At the recent Timonium, MD hamfest, someone had three Enigmas on display; two WW-II German units (one 3-rotor and one 4-rotor version), and one post-war commercial unit. They weren't for sale, just on display with a lot of rare/unusual morse keys. Very interesting.

At the National Cryptologic Museum near NSA in Fort Meade, MD, there is a 4-rotor German Enigma on open display. You can set the rotors, type on it and watch the lights blink. I was also able to open it up, remove the rotors and have a good look around inside; a real treat for a fan of crypto history like me. There's tons of other crypto stuff there too, as well as a gift shop with some fairly unusual items. It's well worth the time if you're in the Baltimore-Washington DC area:

Well, I'm not an aircraft collector - I only collect radios. As to correct original uniforms, I'm not a WW2 reenactor.
The correct period uniform I shout "huzzah" in and fire my Brown Bess musket in is that of the 3rd. NY Regiment of 1775 as I do reenactments as a member of the Brigade of the American Revolution... The only military communications I do from that time is that I know commands by drum and bugle...

Source record: 42197

Several years ago I bought a RBC that I was does not work.
The receiver was built by RCA and rebuilt at Charleston Navy Yard in 1959 and may have been modified, but I don't see any indication of a mod. It looks so clean and neat that I think it's going to be a great receiver. I'm digging through my junkpile now to build a power supply for it and am trying to determine the current requirements.
If you know of a source of data for this receiver I'd like to know. I have several pages of the manual but the data I have doesn't quite match the interior and it's a little difficult to read anyway. It is a reproduction of a reproduction, apparently.

Source record: 42198

I have for sale one of the finest amateur trap verticals manufactured by anyone, anywhere (Taylor Radio). It's the HQ-1040-AV, a omnidirectional, self-supporting trap vertical that operates on all bands 10 thru 40 meters. It is designed specifically for ground mounting for those who have limited real estate or, just don't care to install long wires. The SWR of this antenna is such that you can operate 10 thru 40 meters with an SWR of 2 to 1 or less. The use of high Q traps provides buil- in band selection. Mechanical height is almost 20 feet, 52 ohms impedance, can take up to 2000 watts. Antenna is in very good condition mechanically, electrically and cosmetically. Has booklet. Pick up only in Mobile, AL. I'm selling because I'm out of work and need to raise some grocery money.

I'd like $100.

Thanks,

Reggie

These scanners are in real good shape. Original bought them because they reminded me of the early days of scanners. Good working condition for all three. Nice shape cosmetically. Would like $40 for each or $75 plus shipping for all three.

Source record: 42208

Please see my Astatic DN500 Microphone currently up for auction on e-Bay.
This mic is in very nice shape. It is a high impedance, dynamic microphone
from the 1950's. It is a good microphone for boatanchors.
It is wired for Collins radios and works great with my S-Line. It has the
original paint which is the same color as the front panel
of the S-Line and KWM-2s. The color in the pictures looks more blue. This is
due to the lighting when I took the pictures.
Thanks, Charlie Hugg, K5MBX

Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Look for a relay where:

- The moving contact isn't connected with wire (low stray inductance), and

- The moving contact is isolated from the magnetic armature (low stray capcitance).

The Potter-Brumfield "RK" series is a good example. Its leaf spring contacts have low inductance and are well separated from the armature metal. Their T90 series is not, because the moving contact is mounted directly to the iron aramture.

Other manufacturers have similar parts. Go to the surplus store and have a look at the goods before buying.

I'd like to thank everyone for their input to the SX-101A.
I am a relative newbie and have done two HQ-129X and a National. I always like input. I plan to recap using orange drops. I really enjoy getting these old rigs going and sounding good. Although I am slow, I like to get as much info and take my time. I plan to find a transmitter to mate with it. Again thanks to everyone for their input. Jos

I have two of them and they work very well. It's a nice receiver and can
benefit from the recap as every other vintage radio out there.
I really like the audio on the SX-101As they sound really good on SSB and AM. I
think youl be very happy with it. I matched both up with a Valiant and a
Ranger. They work well together.
If it looks good keep it forever. Good luck, 73 Chris VE3NGW/W4 Florida

From: jwodell@provide.net
Message-ID: <3cc92f64.1118990@news.provide.net>
Source record: 42220

You know, I really wonder about people who automatically replace all the paper capacitors in a 60 year old radio with orange drops and such like.

(1) If the confounded has lasted that long, it's going to last another 60 years.

(2) I shudder to think of the damage done by people who don't know what they're doing. I have vividly in mind a man soldering to the base of a compactron with the tube still in the socket.

(3) In short, if you recap a unit completely, I don't want any part of it. Besides, orange drops were no prize

Maybe. Sometimes they go into a dead short in the middle of a QSO.

Also, the quality of the modern caps is much better.... you should hear the fantastic sounding audio of some of the rebuilt Vikings I have heard on the air.

>(2) I shudder to think of the damage done by people who don't know
>what they're doing. I have vividly in mind a man soldering to the base
>of a compactron with the tube still in the socket.

Well, that's a side issue. People who don't know what they are doing shouldn't be inside gear to begin with, if only because of the safety concerns. Doesn't anyone elmer any more?

>(3) In short, if you recap a unit completely, I don't want any part of
>it. Besides, orange drops were no prize

True enough, but it gets much better than that.

I have a brand new, unused Best model Patroit SPI 600 uninteruptable power supply (UPS) or "standby power system) that is still in the box. I bought it during my days when I was more enthusiastic about computers than I am today. :) I am looking to trade it for a good condition VARIAC with a 0-130 VAC, 20 Amp rating or more.
The Patriot SPI 600 is rated at 600 VA and can supply power to your entire computer system for up to 133 minutes (at 75 VA...i.e. MacIntosh SE/30 ).
It will automatically kick on and provide power to your system as well as spike suprression and line noise filtering.
The unit is still in the box with all associated software (on CD-ROM).
I will be happy to email pictures to you.

...

There is no proof that this is true. It could also be said that they've lasted 60 years and, because of that, have 6 hours of useful life left. In many cases, older caps, while not shorted, are so leaky that the receiver's performance is compromised. I've recapped older receivers, and their performance improved markedly.

Message-ID: <ucl916528kpge6@corp.supernews.com>
Source record: 42159

I have come into ownership of a Hallicrafters HT-19 Transmitter for which search after search, page after page has lead me nowhere regarding information.
It's apparently FM, CW, and NOT SSB or AM but is designed for 80-10M operation.
Does not appear to be typical 50 ohm antenna, but hiZ instead for output.
I found an add in an old CQ magazine from 1948 that shows it sold as NBFM mode transmitter in the Allied Radio Ad section.
Looks kind of unique to me, and am wondering now, if it is valuble to a collector, then just how much?
Thanks for reading!

Message-ID: <K%yy8.53574$QC1.3879455@bgtnsc04-news.ops.worldnet.att.net>
Source record: 42163

Spring cleaning has arrived. For sale:

Drake TR-4C with AC-4/SP-4 $275
National NCX-5 with matching AC/Spkr $150
Hallicrafters SX-122 $250
Matching Spkr to SX-122 $95

All items work well and both transceivers have exceptionally good transmit audio. All prices are plus shipping from 92101 (San Diego). The TR-4C has a good front panel, and a repainted case which looks very nice with no dings. The NCX-5 has a few small spots of what looks like missing paint in the front panel and a few scratches on the trim, but looks very presentable and has an exceptionally clean chassis. The SX-122 has a repainted spot on the black part of the front panel which does show but not at a distance. All pieces has correct knobs. Prices are low and firm. The speakers and power supplies will not be sold separate unless the rigs are sold.

# 4036. Gates HF Power Amp.

From: Jim DiMauro <jfd@warwick.net>
Message-ID: <3ccacca9@news1.warwick.net>
Source record: 42165

I have a Gates HF power amp RF deck that operates from 2-30 MHz and runs a 4CX-1000A. I need a manual, or at least a schematic and specs. Unfortunately the power supply is missing, and that's where the model number plate was. The unit is similar to the Gates HFL-1000, and it dates back to the mid-to-late 1950s. I have JPEG photos of the front panel and inside top that I can e-mail to anyone who might think they can help identify the unit. Any leads? I understand there's a Gates newgroup somewhere. Anyone know the address?

Thanx.

Jim

# 4039. Cleaning crystal cans

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-27 17:14:21 UTC
From: gaschafer@attbi.com
Message-ID: <3ccadc95.1893036@netnews.attbi.com>
Source record: 42167

I came across a bunch of hc6 type crystals that have been wet. The
cans have a lot of green
stuff (corrosion) on them. Anybody have any ideas what to soak them in
to clean them up?

Thanks
Gary K4FMX

Jim -

Normally I would call the Harris (Old Gates) broadcast technical support (customer service) group in Quincy, IL

A large number of amateurs use to be on staff at the factory / plant.

Given the age they MAY have some old documents still on file - but that is just a guess

Some helpful Hallicrafters S-38 series web links:

http://www.concentric.net/~Stwradio/hals38.htm

http://antiqueradio.org/halli08.htm

Hallicrafter's Collectors International (HCI)
http://www.w9wze.org/

Did you check with Bama on-line manuals for your S-38 model ??
http://bama.sbc.edu/hallicra.htm

BTW, this is from my posting on November 2001 to this newsgroup

---
The use of Isolation transformer recommended ... especially if the rubber isolators are gone !
November 2001 posting

Last week I was asked by a friend to look at an old Hallicrafters S-38C, a popular short-wave radio manufactured in the post WW2 era (1946 - 1960).

Hallicrafters, in order to save money and reduce cost, produced this radio model with a transformer less AC/DC design. I lovingly refer to these radios
as potential "shock bandits".

Restorers routinely install a polarized AC plus on these AC/DC receivers. In addition, many restorers recommend an isolation transformer, with the proper VA rating (usually 50 to 100 VA), to protect the user from potential shock or lethal voltages.

In addition, most restorations replace the paper and molded paper capacitors with mylar or metalized film capacitors, as well as all the electrolytic filter capacitors (usually dried out).

I think that there is a "better mousetrap" instead of the separate isolation transformer approach.
The solution should be acceptable to most restorers who do not wish to have a separate isolation transformer.

Use a low profile, toroidal isolation transformer under the receiver's chassis.

Advantages

1. Safety, usage of an isolation transformer improves safety within the radio and for its users.
2. Continence, No need to carry around a separate isolation transformer.

3. Maintains original appearance. Most torrid designs in the 50 to 100 VA category are only 1.5" high (38 mm) and can fit underneath the chassis, damaging the original appearance
4. Simple installation. The one hole mounting design of a torrid transformer usually permits easy installation in older receivers without additional holes. In the case of the S-38, using the hole for the old multi-section electrolytic filter capacitor bracket.
5. Toroid Design. All of the advantages of the toroidal design versus the traditional EI designs.
6. Price. The current pricing for torrid transformers is equivalent to the current isolation transformer prices. This contributes no additional cost to the radio's owner, in achieving the aforementioned advantages.
---
Greg -

Thanks for your email. Scary as it may seem - I vaguely remember the Halicrafters line of radios available in the 60's!

I agree that a small toroidal isolation transformer could provide the safety of isolation required, and fit neatly into a low profile chassis. Plitron (Canada) has a number of potential models for this usage.

# 4051. FS: Collins 75S-1, German & US WWII radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-27 21:30:03 UTC
From: kb9olm@yahoo.com
Message-ID: <cba55a41.0204271330.58ada62d@posting.google.com>
Source record: 42179

For sale in San Francisco Bay Area:

1. Collins 75S-1, very good cosmetic and working condition. Serial number 16XX. Very clean inside and out. No modifications, all original. Was recently aligned by a Collins specialist and several tubes were replaced. Meets all original specifications. Comes with the original user manual and original AC power cable. $325. Will not ship, local pick-up in SF Bay Area.

2. German WWII Radio Receiver [Torn. E. b], Tornister Empfï¿½nger "b". This receiver was used by Wehrmacht on the ground and in vehicles. The receiver is a four tubes TRF circuit with a regenerative detector. Tubes are direct cathode RV2P800 type. Spare tubes available. Receive modes: AM and CW, which works for SSB reception as well. Frequency range: 97 KHz to 7100 KHz (eight bands). Very good cosmetic condition. Looks very clean inside and out. All parts, tubes and components are original, no modifications. Comes with a front dust cover for the radio case. The radio also comes together with an original power supply. However the power supply was professionally modified for the 115 V AC input voltage operation. It provides very well filtered and regulated 2.0 Volts DC filament and 90 Volts plate voltages. Most of original power supply parts were used. The power supply looks original from outside. Homemade connecting cable is also included. Works very well on all bands to the original specifications. Very good sensitivity and selectivity in regenerative mode. $675. Will not ship, local pick-up in SF Bay Area.

3. WWII National RBL-5 receiver. Was made for US NAVY. The receiver is a seven tubes TRF circuit with a regenerative detector. Frequency range: 15 KHz to 600 KHz (six bands). Very good cosmetic and working condition. Very good sensitivity and selectivity in regenerative mode. Works very well on all bands to the original specifications. Very clean inside and out, like new condition! No modifications, all original. Comes with the original mounting rack, original user manual and original AC power cable. $175. Will not ship, local pick-up in SF Bay Area.

Subject: FS: 10 thru 40 meter vertical antenna!
From: moody1951@aol.com (Moody1951)
Date: 4/25/02 8:53 AM Central Daylight Time
Message-id: <20020425095340.28399.00003713@mb-fu.aol.com>

I have for sale one of the finest amateur trap verticals manufactured by anyone, anywhere (Taylor Radio). It's the HQ-1040-AV, a omnidirectional, self-supporting trap vertical that operates on all bands 10 thru 40 meters. It is designed specifically for ground mounting for those who have limited real estate or, just don't care to install long wires. The SWR of this antenna is such that you can operate 10 thru 40 meters with an SWR of 2 to 1 or less. The use of high Q traps provides buil- in band selection. Mechanical height is almost 20 feet, 52 ohms impedance, can take up to 2000 watts. Antenna is in very good condition mechanically, electrically and cosmetically. Has booklet. Pick up only in Mobile, AL. You can see a photo of it at: http://www.communications-plus.com/verticalswf.html

I'd like $100.

Thanks,

Reggie

# 4061. FS Drake, Hallicrfts, Tentec

Message-ID: <loMy8.50533$Rw2.3957034@bgtnsc05-news.ops.worldnet.att.net>
Source record: 42189

Spring cleaning has arrived. For sale:

Drake TR-4C with AC-4/SP-4 $275
Hallicrafters SX-122 $250
Matching Spkr to SX-122 $95
Tentec Tritan IV analogue with an extra parts unit $175.

All items work well (except the spare parts unit). All prices are plus shipping from 92101 (San Diego).

The TR-4C has a good front panel, and a repainted case which looks very nice with no dings. The Tritan IV has a couple small wear marks. Both transceivers look very presentable. The SX-122 has a repainted spot on the black part of the front panel which does show but not at a distance. All pieces has correct knobs. Prices are low and firm.

National NC-190 Receiver
This is nifty old receiver with that classic space age blue finish. Front panel looks very nice, but some of the knobs look crusty and need cleaning. Appears to be all original with no modifications. Receiver is non working but it is all there, and will clean up nicely. Will sell for $99.00 plus shipping

Harvey Wells Bandmaster Senior TBS-50C all band AM-CW transmitter In very good condition, complete and untested. Reported to be working when last used. No VFO or power supply. Front panel shows really nicely. Will sell for $109.00 plus shipping

Heath HD-15 Phone Patch. Unit is in excellent condition with all original knobs etc. Will sell for $16.00 plus shipping

Yaesu SP-901P Phone patch / Speaker Accessory
Perfect to round out your FT-901 line. Unit is in excellent shape but needs two scratches touched up on the top. Front looks great, including the original knobs, meter etc. Will sell for $40.00 plus shipping

WW2 British Mark 2 straight key. Missing two screws, but otherwise clean and in nice shape. Contacts are still in very good shape. A few imperfections, but will polish up and restore nicely. Will sell it for $39.00 plus shipping

Straight Key - for the CW buff who wants to be ready for straight key night. Also useful for beginners learning the code. This has locking bar for tuning and is an adjustable key with nickel silver finish. Will sell for $24.00 plus shipping

TS-175 Frequency Counter - exceptionally nice military unit in near mint condition with original chart. covers 125 kHz to 20 MHz. Will
sell for $75.00 plus shipping

LM-10 frequency counter - 'Type CRR-7402B crystal calibrated frequency indicating equipment' with original chart book, in very good condition. Will sell for $49.00 plus shipping

MFJ 204B Antenna noise bridge with original manual.
Will sell for $45.00 plus shipping

MFJ-941D Versatuner II antenna tuner in excellent shape. Matches about any antenna to your HF rig. 300 Watt antenna tuner that covers everything from 1.8 - 30 MHz and includes meter, antenna switch and a 4:1 balun. Meter shows SWR, forward and reflected power - antenna switch lets you select 2 coax lines, random wire/balanced line or dummy load (direct or through). Efficient 12 position airwound inductor gives lower losses and more power out. Has 4:1 balun, 1000 Volt capacitors, and a beautiful aluminum cabinet. Will sell for $59.00 plus shipping

Knight TR-106 with V-107 VFO
Excellent looking Knight 6m AM transceiver with the matching VFO. Also comes with the original, blue 'Knight' labelled Shure hand microphone. This radio can operate on either 12V DC or 115V AC. Comes with 115V AC cable. Otherwise complete and has very nice appearance. Sold as-is. Comes with a copy of the manual.
$125.0 plus shipping

# 4067. Tentec/Drake/Hallicr FS

Spring cleaning has arrived. For sale:

Drake TR-4C with AC-4/SP-4 $275
Hallicrafters SX-122 $250
Matching Spkr to SX-122 $95
Tentec Tritan IV analogue with an extra parts unit $175.

All items work well (except the spare parts unit). All prices are plus shipping from 92101 (San Diego).

The TR-4C has a good front panel, and a repainted case which looks very nice with no dings. The Tritan IV has a couple small wear marks. Both transceivers look very presentable. The SX-122 has a repainted spot on the black part of the front panel which does show but not at a distance. All pieces have correct knobs. Prices are firm.

Non-mineralized water, softest would be actual distilled water. I'm an unofficial expert in this subject, the well water I use on the yard is so hard (mineralized) I have to clean the house windows at intervals with vinegar ( mild acid) to get the windows clear.

FOR SALE - a few more boatanchors.
Pictures of all available on line (See below)

Clegg 22'er classic 2m AM transceiver with mobile microphone
and manual. Looks very good. sold as-is untested.
Will sell for $55.00 plus shipping

Heathkit HW-17 classic 2m AM transceiver with microphone.
Meter is missing but otherwise very clean.
Will sell for $45.00 plus shipping

Command Sets - ARC5 Receivers
A pair of BC-455 receivers - missing some parts, most tubes are gone.
Tuning dials and i.f.t. cans etc. are present as are most components
underneath the chassis.
These would need some major work, or use them as spare parts for your
repairs.
Will sell the pair for $10.00 each = $20.00 total plus shipping

CLASSIC 1940s-50s HOMEBREW TUNER
What a beauty! This jewel has all heavy duty components including a
dandy of a roller inductor with turns counter, The variable capacitors
are pretty
large and looks like it would handle a kilowatt with ease.
The versatile circuit is configurable for either series or parallel
'T' configuration.
Has jumpers in front to change set-up easily.
Has built-in SWR bridge utilizing an E.F. Johnson meter with controls
for FWD, REV and gain.
Case is made of hammertone finish steel with a removable
lid. There is a small chip out of one of the knobs.
Will sell this gem for $175.00 firm plus shipping

Rare Heathkit CB-1 Lunchbox rig.
Here is a Heath CB transceiver that could be used on either 10m or 11m
AM. Very rare nowadays. Most are hacked to pieces or in the
dump long ago. As you will see from the picture this rig is in very
clean condition. Looks like someone added a switch in the front
which could be very easily removed and the hole
filled and painted over to restore to like-new condition.
Will sell for $45.00 plus shipping

Heath Mobile Speaker
These are getting hard to find. Excellent condition. Has not been
beaten up and repainted like some you see. The perfect companion to

any HW series Heath rig.
Often used mobile with the HW-12, HW-22 and HW-32 radios, but also a fine mate to the HW-17 for sale above.
Offered for only $22.00 plus shipping

Heath HW-202
Classic Heath 2m FM mobile transceiver with plenty of chrome.
Condition unknown, sold as-is. Looks like it's all there. Comes with the microphone. Will clean up nicely.
Comes with the ORIGINAL (thick!) manual, original Heath microphone, cables etc.
Untested and will be sold as-is for $39.00 plus shipping

Also original Heath HA-202 amplifier manual $8.00
Original Heath Micoder HD-1984 Manual for $8.00

Heath HD-15 Phone Patch. Unit is in excellent condition with all original knobs etc.
Will sell for $22.00

Lafayette Capacitance Substitution box
Model 99-50205 in excellent condition with test leads.
Will sell for $20.00 plus shipping

Yaesu SP-901P Phone patch / Speaker Accessory
Perfect to round out your FT-901 line. Unit is in excellent shape but needs two scratches touched up on the top. Front looks great, including the original knobs, meter etc.
Will sell for $45.00 plus shipping

MFJ 204B Antenna noise bridge with original manual.
Will sell for $45.00 plus shipping

Palomar Noise Bridge with manual $45.00 plus shipping

Source record: 42104

FS: Collins 20V3 Transmitter. It is totally apart and ready to be restored.A friend of mine picked it up in barely working condition and he lost interest in the project. It is mostly there, but missing some minor parts. The mod iron, chokes, HV iron is all there. The Cabinet is paint stripped and ready to be repainted. He wants $600 firm for everything it. It is worth more than that in parts- He was already offered $125 for the big winged emblem! Come and get it in PA (near Philly) before we put the individual parts on ebay. Anyone looking for parts please hold off on offers as I want to get rid of the whole thing at once and will not entertain any offers at this time. If it doesnt sell in the next 2 or 3 weeks it will be parted out.
Thanks!

# 4077. Re: CQ: Navy RBC receiver data

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-04-29 04:26:56 UTC
From: maritimus49@aol.com
Message-ID: <20020429002656.00752.00008237@mb-bg.aol.com>
Source record: 42105

Hello John -
I once used an RBC more than 35 years ago and it was a real pleasure to operate. I remember the very large housing for the power supply and assumed that it was very complicated. However, I was able to find the operating voltages for you. Go to the search engine www.google.com and type in "RBC receiver". It will take you to several hits that can provide you with other people's experiences with the RBC, including restoration tips. The voltages that it uses are printed on a nomenclature tag. They are as follows -
6.3 VAC at 5 amps, obviously the filaments
17 VAC at 0.6 amps, not sure what that is for
105 VDC at 5 ma, possibly screen voltage
200 VDC at 80 ma, plate voltage, etc
Perhaps the man who write the article on restoring it in the issue of Electric Radio could help you further. Sounds like a worthwhle project and I wish you success with it.

73,
Bruce K6RQR

# 4078. Drake TR5 for $20!

Try one of these:

1) HAMfest
2) Flea Market
3) www.tubesandmore.com
4) DIY

Those are nice tubes. Have fun with those beauties!

A 5894 socket should also work (ditto for an 832.) Watch for used damaged
GE base transmitter strips that use the 5894 in the final.

Same here. I have a KW 2000E with power supply. The RSGB Magazine Rad-Com had an article by G3WZE in May 1999. I also found Peter,G3RZP who worked for KW years ago. I need some help in aligning my receiver. I replaced the 455khz filter with a Murata CFJ455K 5 (I have several more) but the sidebands don't line up right and its lost sensitivity. The E model (circa 1973) has RIT/XIT added thus the E. Rollie G8KW was honored by RSGB in 2000 when he turned 80. I am not sure if they sold out to Decca or made tuners and amps for Decca.

# 4121. WTD: Tuning Drawers for T.M.C. rec. AN/FRR-49(v)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-01 23:51:52 UTC
From: aa8wl <aa8wl@comcast.net>
Message-ID: <3CD0AC72.6255F134@comcast.net>
Source record: 42049

Hi, I picked up this nice rack mount receiver which uses changeable tuning units for different freq.. I am looking for a couple other modules if anyone has any the want to sell. There are eight units made that the book shows and I have the ones for 2-4 Mhz, 4-8 Mhz, 8-16 Mhz, at this time. I also am looking for the rack mount cabinet that holds the extra units while not being used by rec.

Nomenclature
TN-5014A/FRR-502 (16-32 Mhz)
CY-5045/FRR-502 (Cabinet for spare tuning units while not used)
CY-5045A/FRR-502 (" " " " " "
" " )

I am sure there are some of these older units as they were made for the military by T.M.C.
The one I found was made for the Canadian Air Force.
Thanks for any help or suggestions about this nice receiver. Thanks in advance DE aa8wl Sam

Yup. Opposite of 'hard' water!
Hard water being that which has high content of dissolved
minerals, which, in the best case cause scale in pipes and
cooking utensils. In the worst case such minerals can be
harmful; including arsenic, lead etc. in concentrations
which are poisonous, short or long term, to mammalian life
including human.

Carl,

Use ebay, search for the item of interest, or something similar. Do completed auction searches as well. Add all the amounts, divide by the number valid amounts, multiply by .4 and you have a realistic value of your item outside of the auction venue. You should have at least 5 items in your average.

Regards,

Charles

Have one in nice shape. Pictures in
http://ftp.bay-town.com/~p15218/Images/NC-46/.
The BA really needs almost nothing as I re-capped (re-tubed and
re-reristored where
needed) it about a year ago. The power switch is defective and hard wired
on.
If you are looking for a "deco" style, late 1940s general coverage receiver,
this is it.
I'd like to get $85 for it and would prefer pickup in the Detroit Michigan
area. I might be going to Dayton and might be able to bring it for a buyer.

# 4142. FS: Hallicrafters SX-42 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-03 00:53:05 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <ud3ntfpn7346b1@corp.supernews.com>
Source record: 42070

For sale, one 1947-ish Hallicrafters SX-42 in working but somewhat ugly condition. I'm selling because we are moving and I need to downsize...very soon.
See pix at: http://ftp.bay-town.com/~p15218/Images/SX-42/

Positives:
1) It works pretty darn good on all but one band.
2) All the knobs are correct and in good shape.
3) Tuning mechanism very smooth. Bandspread lock knob works as it should.
4) All the controls are in good shape as are the switches.
5) Sounds very good in all modes, FM is real HI-FI!
6) The chassis looks pretty good.
7) The front plastic trim pieces and the meter look very good.
8) It has been recapped with new disc ceramics and tantalums in low volts areas. Some out of tolerance resistors replaced.
9) No extra holes drilled in the chassis or cabinet. Both appear to be stock and not dented.
10) Comes with copy of the Sam's photofact

Negatives:
1) Needs front panel redone or replaced. New ones (maybe repro?) are about $110
2) Cabinet needs stripping, sanding and repainting. Lots of surface rust but it is very restorable. Needs elbow grease and paint.
3) 15-30 Mhz band is about 6-10 dB lower sensitivity than the other bands. I never did dig into this to find out why.
4) The meter needle sometimes sticks at the high end. Probably repairable or just a light tap "clears" it.

I'd like to get $200 for this famous boat anchor but I really have no interest in shipping it. I am conveniently located about 20 miles south of Detroit Michigan. Slim chance I might be going to Dayton in a couple of weeks and I might be able to bring it along for a buyer.

# 4151. FS:R1155 Receiver,Original,With DF,Full Working Order.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-03 08:30:25 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <ud4ilt68qg85be@corp.supernews.com>
Source record: 42079

FOR SALE R1155 RECEIVER
Totally original condition,complete with DF section and in good working order.
R1155 receivers in all original condition are exceedingly hard to find.Most have long since been modified in various ways.Almost all sets encountered have had the Direction Finding components removed.Often the corresponding Direction Finding controls have also been removed from the front panel.The final indignity is then to "hack" the inside around in order to fit a power supply!For anyone wanting an authentic,unmodified,all original R1155,the task of locating one is very daunting.
The good news is that we have just taken just such a receiver into stock; an all original R1155 in exceptional condition.
All of the Direction Finding components are present, as are the numerous front panel knobs and switches.All of the individually screwed on name plates, for each of the controls are present and correct.The original Air Ministry plate is present.The frequency markings and coloured band marking on the tuning dial are crisp and clear.The tuning drive is the superior off-set type, with two speed course and fine tuning by concentric tuning knobs.The Magic Eye tuning indicator is present and functions correctly.Inside of the case,the original cork damping panels are all present and the original tube locator chart is fitted to the inner rear of the case.The case and front panel have been re-furbished at some time in the past,in the correct matt black,(not crackle,as is often incorrectly used),which is the only concession to restoration.
The receiver has been thoroughly tested and is in full working order.
Included with the receiver is a copy of the Air Ministry manual for the R1155 and copies of various informative articles on the subject of the receiver.
The price for this exceptional receiver,which includes very thorough packing for safe transit and also includes Air Freight to the USA,is $540 US Dollars.
If you would like more information or wish to go ahead and purchase this quite remarkable receiver,please contact,
Graham Leo info@radio-exports.com
Thank you for your interest.

# 4161. FS: National SW-3 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-03 15:58:34 UTC
From: kb9olm@yahoo.com
Message-ID: <cba55a41.0205030758.30d8e93b@posting.google.com>
Source record: 42089

For sale (before it goes on eBay):
National SW-3 radio receiver (AC version with 58 tubes). Like new condition. No electrical modifications, 100% original. Works. Original black wrinkle paint.
Comes with original "dog house" power supply and original National speaker box.
Power supply is brown wrinkle paint. No electrical modifications. Very good condition. 100% original. Speaker box is a grey colour wrinkle paint. Very good condition. Several drops of house paint on the speaker box. Should be easy to clean. Not sure that speaker itself is original, but old as well. Can also offer for sale two original ham bands bandspread coil sets. Will not sell coils separately, with radio purchase only. Best offer over $550. US PO Money Order. Shipping extra. Cont. US only.
Please reply directly to kb9olm@yahoo.com

GPR-90 receiver in original cabinet. Works fine, has calibrator and manual, appearance is a 9+, $910

## 4166. FS Drake and Hallicrafters

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-03 23:02:56 UTC
From: John <K6KOI@worldnet.att.net>
Message-ID: <AGEA8.4972$6T5.403100@bgtnsc05-news.ops.worldnet.att.net>
Source record: 41994

Drake TR-4C and AC-4 in good condition. Nicely repainted case; good front panel, good output on all bands and especially nice xmit audio. $275.

SX-122 general coverage receiver for sale in good electrical condition. No dents and paint is fair to good. There is a re-painted spot in the black part of the front panel which can be noticed up close. This is a very nice receiver and one of last if not the last Hallicrafters general coverage receivers. It's rather pretty.

Matching speaker for SX-122. Repainted case. Good condition $95 (I will only sell it when or after the SX-122 is sold).

All prices plus UPS ground shipping from 92101.

BA Folks:
I have an (otherwise) nice SB-series station with a problematic transmitter.
It need enough work that I think I'd be better off keeping it for parts and
getting another one.

If you have one that is operationally and cosmetically good, give me your
price. Always have lots of good stuff on the trading table, too...

Thanks!

-Brad, NB9M

(Please respond directly by removing the NOSPAM from the return address.)

FOR SALE:

Shure 444
Desk mic with PTT bar and locking switch. The best sounding mic for SSB on the older Drake 4 line equipment.
Excellent for use with other tube type transmitters.
Picture available on request
Will sell for $29.00 plus shipping

Shure 202 Mobile microphone - smart gray unit with PTT, nice coil cord. Very good condition.
Picture available on request.
Will sell for $35.00

Turner 250
Desk microphone - beautiful silver case with PTT bar and locking switch for those long transmissions! Excellent match for all of the old 'boatanchor' AM and SSB rigs. Picture available on request.
Will sell for $29.00 plus shipping

Icom mobile microphone, low impedance, black - Picture available on request. No, it is not the' HM-36' or any other sandstate fancy mic for your late model rig! Probably went with an IC-21 or IC-202 is my guess. No model number on it. No touchtones.
Picture available on request.
Will sell for $15.00

Heathkit mobile microphone, low impedance, black, rounded looking. No model number on it. Small mic, nothing fancy. No touchtones.
Picture available on request.
Will sell for $15.00 plus shipping.

Another Heathkit mobile microphone, low impedance, white rectangular with rounded corners. No model number on it.
Picture available on request.
Will sell for $15.00 plus shipping.

70 mhz?

Funny but the ads I have seen all say it is a handy-talky that runs on
450 MHz FM !!

70 MHz is not a legal ham band in the USA - only in Britain.

Oh and that is not really a boatanchor either, but no big deal!

That may be the "New Current Edition" but it's 15 years old.

My 23rd edition has a copyright of 1987, and adds that it's a
"third printing -- 1989".

It might be more realistic to call it "The Final Edition".

I have three editions, 19th, 21st, and 23rd, and I got way more
out of the 19th than I did the other two. Of course, when I got
it thirty years ago, I was still new to the hobby, and it must
have been the first hard cover technical book I ever got. The
21st edition changed very little, mainly the projects and even
that only incremental. The 23rd seemed a big step down from
the other two. I'm not quite sure why; maybe there were
fewer projects, or maybe it was just that little had changed
since I read my first copy.

It is worth having a copy of the Radio Handbook, one of these
days I'm going to splurge on that reprint edition of the 1936 edition,
and worth having an RSGB Handbook along with at least one ARRL Handbook,
but I'm not so sure that it needs to be the "new current edition".

Hi all,
I have a Collins HF8050A and am looking for a service manual.

Can you help?

Prefer to purchase original,
or borrow original to copy, will happily pay the cost of mail.

Thanks

Source record: 42020
Cross-posted to: rec.radio.amateur.boatanchors,rec.audio.tubes

FOR SALE:

LOAD RESISTORS for testing audio amplifiers:

8 ohm 50 watts for $8.00 each plus shipping

8 ohms 100 watts for $15.00 each plus shipping

16 ohms 100 watts for $15.00 each plus shipping

4 ohm 50 watts for $8.00 each plus shipping

2 ohms 100 watts for $15.00 each plus shipping

I can supply you with 200 Watt loads - either 4 ohm, 8 ohm, or
16 ohm resistive loads as follows:

Each set-up would consist of FOUR 50 Watt resistors wired for the
correct load impedence. These are brand new DALE Gold Series
(the best precision load resistors you can get!)
and each set-up rated for 200 Watts sell for $24.00 plus shipping.

I can also supply these as 100 watt loads in either 8 ohms
or 16 ohms, for $15.00 each, plus shipping

E-mail me for details

National radio collectors.
I have for sale a fairly rare and hard to find National 1-10 what they called in the late 30's an uhf receiver. This one is in decent shape, not beat at all, although it does show some wear. The dial ( an HRO style) is smooth and all components are there. I have a copy of manual. No PS or speaker. Will accept offers of cash or trade for HF ham equipment, any make. I can supply pictures. Buyer will pay shipping from 48653.
Thanks
JEP

# 4207. Re: collins 32v-2

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-06 00:33:01 UTC
From: Bill & Suzie Whatley <spud286@attbi.com>
Message-ID: <1bkB8.131613$CH.19698@rwcrnsc52.ops.asp.att.net>
Source record: 42035

How much the old 32V-2 is worth depends on the type of buyer and the ethics of the seller.
As an old restorable transmitter for a ham to use on the air it is probably worth $150 to $200. As an item for an antique or Collins collector it might be worth $400 or $500.

I am not into scalping those who are addicted to old gear so I only ask for the value
of the equipment as it pertains to use in the amateur radio craft but each seller and buyer
must make their own decisions based on their personal standards.

It went that low????

The point isn't to build the kit, the point is to own an unbuilt
technological collectable that will never exist again in all time.

I recall that the Eico was overpriced compared to Knight and Heath.
Heath was much better.

Does anyone have a manual for the ICOM 3200 dual band 144/440 mobile radio?
I just aquired one at a yard sale and need the manual to program the bugger,
especially the PL tone table.

Scans are ok in JPG, MAX, etc formats are ok.

Thanks in advance.

Steve,

Save your money!

Here are some resources.

For a general overview of the BC-221 (also known as SCR-211):

http://hereford.ampr.org/history/scr-211.html

Good general info and explains many of the differences.

--

LOTS of manuals at:

http://bama.sbc.edu

(look under "military"). This site may require the use of extra
software to view some of the manuals. All explained there.

--

For the complete original manual (and many more US military BAs) in
.pdf:

http://www.hg7bz.com/manuals.html

(these files are quite large - 27 MB for the BC-221!)

--

There are probably more out there. Search on "BC-221" and "SCR-211"
(note the hyphens)

Source record: 41895

How much the old 32V-2 is worth depends on the type of buyer and the ethics of the seller.
As an old restorable transmitter for a ham to use on the air it is probably worth $150 to $200. As an item for an antique or Collins collector it might be worth $400 or $500.

I am not into scalping those who are addicted to old gear so I only ask for the value
of the equipment as it pertains to use in the amateur radio craft but each seller and buyer
must make their own decisions based on their personal standards.

# 4222. WTD: Tuning Drawer units for T.M.C. AN/FRR-49(v) rec.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-07 00:41:52 UTC
From: aa8wl <aa8wl@comcast.net>
Message-ID: <3CD74FBD.7E58DD27@comcast.net>
Source record: 41901

Hi, I picked up this nice rack mount receiver which uses changeable tuning units for different freq.. I am looking for a couple other modules if anyone has any the want to sell. There are eight units made that the book shows and I have the ones for 2-4 Mhz, 4-8 Mhz, 8-16 Mhz,

at this time. I also am looking for the rack mount cabinet that holds the extra units while not being used by rec.

Nomenclature
TN-5014A/FRR-502 (16-32 Mhz)
CY-5045/FRR-502 (Cabinet for spare tuning units while not used)
CY-5045A/FRR-502 (" " " " " "
" " )

I am sure there are some of these older units as they were made for the military by T.M.C.
The one I found was made for the Canadian Air Force.
Thanks for any help or suggestions about this nice receiver. Thanks in advance DE aa8wl Sam

# 4230. Drake SPR-4 AVC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-07 15:22:27 UTC
From: CJ <cjr@visi.com>
Message-ID: <3CD7F133.6C0658AE@visi.com>
Source record: 41908

I recently rescued an SPR-4 from the dumpster. It works fine since I replaced the parts that had been removed EXCEPT for when I plug the IC (a CA3028 substituting for the original CA3053) into the s-meter board.

I have read VE3EFJ's article on the subject at:
http://www.zerobeat.net/drakelist/drakemod/drmod101.html

He points out the the SPR-4 AVC line is exceptionally high impeadance and that it can be loaded down even by the 11-megohm input impeadance of a good voltmeter or scope.

It does seem to me that the s-meter board is indeed loading down the AVC line resulting in bad AVC action, all or nothing s-meter readings and a total inability to adjust the s-meter according the instructions in the book. I have tried several different FETs for the input source follower stage but can notice no difference in operation.

In his article, VE3EFJ describes how to select the input FET for the s-meter board, but I am not clear about how it is done. I think a few more details of the test method would help. I have tried e-mailing VE3EFJ but the e-mail address given at HamCall bounces. If someone knows how to contact him, or can clarify the selection process for me, I'd be greatful for the information.

Also, does anyone have any idea how it could be that the s-meter board seems to load down the AVC line ONLY when the CA3028 is plugged in? The obvious answer, that it has something to do with the delayed AVC line from the s-meter board to the RF amplifier doesn't fit. Disconnecting this lead makes no difference whatever. And it seems improbable to me that the IC could load the source follower enough to reflect back to the input of the source follower.

I need help.

73, CJ K0CJ

# 4232. Looking for old radio chassis

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-07 18:03:47 UTC
From: Kenneth Scharf <wa2mze@bellsouth.net>
Message-ID: <3CD81703.5E4DCF2E@bellsouth.net>
Source record: 41911

My grandfather had a cabinet from an old console radio that he converted into a liquer cabinet. The cabinet is currently in storage, but I will have it shipped to me soon. I'd like to convert it back into a console radio. I have no idea what make the radio originally was, but the cabinet has slide open doors, and a large area on the bottom for the speaker, the chassis in the upper part of the cabinet.

Anyway what I'm probably looking for is a multiband radio chassis (AM, MW, SW1, SW2 ?) from the 30's or early 40's. Probably glass standard (6C6, 6A7 etc) or octal (6K7G, 6A8G, etc) based double ended tubes (grid caps) (maybe metal tubes). Lineup something like rf-converter-if-if det-af-af. Maybe a PP output stage. I'll have to measure the cabinet to see how large a chassis will fit. I suppose I could hunt up the parts and build something, but it might be easier to just buy a restorable basket case chassis with no major critical hard to find parts missing.

So if anyone has such a thing gathering dust in their junk box, drop me an email. It will be a little while before I actually need it, but lets see whats lurking out there. So far I havn't seen anything just right on ebay, but I've only been looking on and off for a few weeks so far.

How about a leaky cap or an out of value resistor in the avc line. On other receivers thant the SPR-4 I look at avc voltage with a scope or a vtvm.

The IC could load the source follower enough to reflect back into the input
IF the FET had massive leakage. Try pulling the FET and seeing if it's
a ball of sludge inside.

The problem is that these have become rare birds... LOTS of people tossed
the guts out of console radios to make nice pieces of furniture. But if
you have the dimensions and you have an idea of what the thing originally
was, you might have a chance.

I'd say just the opposite. Although many folks have made things out of
the cabinets, I think more cabinets were tossed out rather than chassis
due to rotting, delaminating of the veneer. Any 'old radio tinkerer'
worth his salt should have several old chassis sitting around. They
store much easier than cabinets!
:-)

As soon as I have the cabinet I'll post a photo of it here.
While it might be nice to have the actual chassis that went into the cabinet,
it's not
actually necessary. Heck, I might not even LIKE the original radio,
especially if it only
covers the BCB. I don't know how old the cabinet is, it COULD be from the
20's, but it's
probably a mid 1930's unit. Anyway thanks for the link on the photo archive,
but it will take
quite some time to look through all the mug photos there!

From: wrhood@exis.net
Message-ID: <3cd83ed0.5096981@news.exis.net>
Source record: 41921

We will be setting up Thursday so that Friday AM we will be ready, no waiting. Stop by spaces 3207 & 3208 and look at the stuff we will have listed below. None of it is of the highest "Collins Collectors Cult" standards, but it worth your stopping by and haggling a little. And remember....if you don't insult me....you wont get my best price.

75A4 with schematic on CD ROM
1.75 kHz Collins Filter for 75A4
32S-3 Transmitter
75S-3B Receiver
KWM-2 Transceiver
32S-1 Transmitter
75S-1 Receiver
516F-2 Power Supply (2 each)
312B-4 Console (3 each)
PM-2 A/C Power Supply for KWM-2 or KWM2A
Also various filters and misc. parts for Collins equipment

AND OTHER STUFF
A good rice-box, IC-756, w/ FL-223 Filter (1.9 kHz SSB), New power cord, manual & box.
Great Boatanchor Receiver - Hallicrafters SX101 w/ manual
1950 "PRC" Tube Tester
Variety of old tubes (tested)
A couple of 2 meter FM Transceivers
Simpson "270" Multi-Meter

See y'all at Dayton, no internet inquiries now, if you are interested stop by, touch the stuff and enjoy the conversation.

Source record: 41923

I also have an R-1511 and would appreciate any information I can get for it, such as a schematic diagram.
Mine works halfway decently, but the IF has a lot of loose wiring that I can't quite decrypt. Since it works, I'm not anxious to fool with it too much but would like to make it shipshape. A real Maryland gentleman, John Kelly, sold it to me for almost nothing and I bought it to get parts for my SP600, thinking it probably didn't work. All it needed was a power cord. Now I don't want to cannibalize it.
My R1511 has no data plate whatsoever on it. On the back of the chassis someone wrote "Ser #2" with a magic marker by hand.
Many years ago I saw lots of these in the SIGINT depot at Vint Hill Farms Station where they were apparently being repaired, but I've never seen one in use.

I'm recapping a Heathkit DX-100
On pin 3 of a 1625 (screen grid bypass) , there is a .1 @ 600VDC cap.
Can anyone tell me the advantage of a Mylar "Orange drop" verses a metal,
poly etc cap of the same value.
I plan to do the Orange drop, but I would like to know why they are
perfered and if other caps would do the same job in this instance.
Thanks for reading..Jos

These days there not much difference between basic caps (as compared to the 1950s) either in cost or performance. Some people prefer Orange Drops and as long as you have enough space there's no problem with using them. They are good capacitors.
I believe Orange Drops (of which there are more than one series nowadays) are the old-timey mylar and foil construction. Modern caps use a metallic film deposited onto the dielectric (poly, mylar, etc) and subsequently can be made much smaller. Also, given these physical characteristics, its possible for a metallic film type to 'clear' a short on its own...not that that is really a concern.
I like the CDE DME series because they are smaller and not as bulky and about half the price of an OD.
As a rule, older caps had poorer dielectric materials and the metal purity was not as good as it is now. Thats why so many caps from the 'olden' days are now found to be leaky and way out of value tolerance.
I suspect the current generation will certainly outlast the old mfg. techniques.

GL with the DX-100

Source record: 41937
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Hi!
I finally tracked down the articles written in 'QST' about the
expedition.
The main transmitters were made by hams at National Co.,
namely W1CTW and W1EHT, after articles in QST magazine.
These used 2E30 tubes in all stages, running about 10W input.
The bands used were 7, 14, 28 and 50Mc.
The energy problem was well considered, and it was decided that
no lead-acid batteries could be used due to the risk of spillage of
acid and damaging of e.g. the ropes holding the raft together.
Therefore dry cells were used, in addition to hand generators.
The main receiver at LI2B was the NC173 from National Corp. in Malden,
Mass.
It also used dry batteries as the power source (a 13 tube AC receiver
originally, if it was modified to use directly heated battery tubes the
article doesn't say)
In any case it must have been a very power-hungry receiver for
batteries!
The article tells about their problems with the dry batteries. Their 'A'
batteries
quickly ran down, and when their spares were exhausted they had to tear
some 'B'
batteries apart and connect the cells in parallel to power the tube
heaters.
As back-up rigs a 'Gibson Girl' lifeboat transmitter and a VHF set for
contacting aircraft, were given to them by the US War Dept.
They also had two Brit made 3mkII (B2) suitcase sets from the war with
them
(both Torstein Raaby and Knut Haugland were radio agents from WWII,
but, as many don't know,Thor Heyerdahl himself also was a radio operator
during the war)
Interesting reading!

Message-ID: <hdwX38NCLQJC-pn2-6sISnE4UxXeu@localhost>
Source record: 41939

Is this an SB104, an SB104A, or an SB104 with the SB104A
upgrade kit, or what?

======== What am I? ==

The radio has 100hz screened onto the front panel and
says SB104 under the mic/cw control. It has a 400hz filter
on board E and it has a blue and white sticker on the VFO
that is impossible to read. I ignored that one when I was
looking this morning as I thought it was the Heath part
#/serial number for the VFO. It appears that it has a few
metal film and electrolytics added here and there and
certainly has been worked on, but I couldn't say if it has
been upgraded.

======================

Having 100hz or 400hz screened on the front panel is some
kind of clue but what does it mean?

An article on the BC221 was written by H.J. Long BEM G5LO in the APRIL
1960 edition Practical Wireless. That was, of course, when radio
amateurs had to have some technical knowledge and needed to demonstrate
that they could measure their transmitting frequency.
I could scan and send you the relevant pages if you so desire.

Currently on eBay - several lots of WW II vintage transmitter tubes. Great for hamfest sales, experimenting, or projects:

(22) 837/VT-101 transmitting pentodes - used in the ART-13 & other military xmttrs. New in boxes, no reserve:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1350483539

(4) Eimac 15E triodes - used in many WW II aircraft radar transmitters and jammers. New in boxes, low reserve:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1351115488

(4) Eimac 15R rectifier tubes - also utilized in radar xmttrs & jammers. New in boxes, no reserve:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1351111067

..Thanks for looking

Source record: 41952

For Sale:
Gonset SSB transmitter, GSB-100 and the matching amplifier, GSB-101 for sale. The transmitter has low output but its all there as near as I can tell. Needs work, $95. The amplifier is working with over 600 watts out with new finals, $250. Both rigs cover 80M to 10M. Good physical condition on both. No dents. Faceplates are in good condition. Some chips on corners of cabinets. No mods that I can see.

These boatanchors are heavy. I don't want to ship. You pick up (Philadelphia suburb) or I can deliver to Dayton. I have pics for those interested. Will split.

73,

Bill, K3PGB

Hello,

W7ASU at Arizona State University found an old Atlas 350XL transceiver, circa 1978, in storage. My son brought the unit home for me to check out. I aligned the receiver, but found one of the final amplifier transistors, a CD2545, bad. There are 4 in the amplifier and must be matched by HFE to share the load. Of course, these transistors are no longer available.

If it were working, I'd guess that the radio has about a $200 value.

I seem to have at least these choices:

1) Replace the devices with a matched set of new equivalents. This is from $60 for matched HFE ranges from the manufacturer to $100 for devices that are actually matched by testing and comparing.

2) Perhaps someone on this list has a few of the original CD2545 transistors. Used in unknown condition is fine. I would be happy to test and sort them against my 3 working devices to get a matched set of 4, as long as the price was right.

3) Perhaps some one on this list has a junk Atlas 350XL. Maybe I could salvage some matching transistors from it.

4) Maybe someone wants W7ASU's Atlas 350XL so badly that they'd make an offer for this one with its bad transistors.

5) Perhaps W7ASU should just throw the radio away. The 14 volt 32 amp power supply is nice to keep though.

Well, please send your offers and advice along. I will read and consider everything. You may want to visit www.asu.edu/clubs/amateur_radio_society.

Thanks and please reply to this group or:

Mike WA7ZPU deWA7ZPU@aztec.asu.edu

Mylar is polyester. It's fine. As film caps go, mylars are usually the
cheapest and smallest for a given rating.

Source record: 41961

FOR SALE:

A few, probably a half dozen or better - coils or forms thereof, from old ARC 5 types of radios. If you own such radios or maybe want to use these as forms for other types of coils for homebrew, they're going cheap. $5 for all.

A case from an old NRI Model 88 Voltmeter. IF you have one and the case is all dinged up or rusty, this one isn't in too bad of shape... OR use it to homebrew something else. $3.

Case from an old Jerrold FSM. Good for some type of project. Front door swings down. Cut outs for line cord and other cable. $3.

Copper coils, rather large, presumed to be out of a homebrew transmitter. $3.00 each

Motrac VHF High Band 150 something. Rcvr works fine. Tx, needs TLC. Unit comes with cable, control head and a mic. No speaker. $20

Old ICS School RF/AF Generator. It is crude - not many parts and has no cover - so you would have to make sure no one can stick their fingers in it while on.... When last tested, seemed to work to the extent I tested it, which was only an RF frequency or two. $5

Other items available. Inquire with your needs. Need to clean out the shack and shop. Payment and shipping terms below.

Here is a rare one for my fellow vintage Yaesu enthusiasts. Yaesu's only "vintage" top band capable, full power amp. A-1 condition inside and out. Matches the "F" series 400, 401, 560, 570 etc. 2KW input from 160-10 meters. Unit uses 5 6KD6 sweep tubes (Fresh NOS). Supplied with original manual and one extra set (also fresh NOS) of tubes. $500.00 firm plus shipping from 11554.

_____

2kw with 5 6KD6's? For how many milliseconds?

To not exceed their plate dissipation ratings, you would have to have an efficiency of better than 90%. Please explain how this remarkable figure is achieved in a linear amp.

Unless it is used for CB service of course, where all things are possible. :-)

It's probably dependent on which CB style Watt Meter
read the highest; and than you multiply that reading times
2 for SSB right?

OK Guys, before this thread gets out of hand the ratings were not published
by me, they were published by Yaesu. If you are familiar with this old stuff
it is all in THEIR manual. Let's not shoot the messenger OK?

Quite powerful MOSFET devices are now ~$2.00 each, just to give an
idea of value/$spent. Surely there are inexpensive solutions for this
rig of a type appropriate, MOSFETs being the only current example I

have.

Dear All,

I recently acquired an aerial tuning coil or roller coaster -
Coil Aerial Tuning No. 2A,
Wireless Set Canadian No. 52,
made by Marconi Canada in 1944.

It seems to be about 125uH (dodgy meter) and is about 6" dia by ~10" long with 43 turns. I've found out that the 52 set is the descendant of the famous 19 set. I was planning to use the coil to build an ATU but I'm open to offers if anyone wants to preserve it. It is in the original duck-egg blue wooden box and seems complete. If anyone has more info or an accurate spec I'd be very grateful.

Ah Yes!
It all makes sense now Bill! How could I have missed it?
It is your disdain for Yaesu's "frightfully inaccurate power specifications"
(abbreviate that one "BS") published on a 25 year old Amplifier which
prompts you to embark on a "One Ham Crusade" to "Right the Wrong" by taking
a cheap shot at my FS post. The thinking perhaps being, "Hey, I despise
Yaesu's "Creative Writing" (abbreviate that one "BS" also...) so let me cast
doubt in the minds of any folks that might actually be interested in adding
this unit to their lineup regardless of how it might ultimately affect a
fellow Hams attempt at a Sale or his Credibility (...by virtue of my snide
remarks loosley associating him with CBers...executed in a good natured way
of course by adding a "smiley" :-), afterall I would not want to smear my
own good name in any way..."). Did Yaesu ever make 2 kilowatt amps for
CB.....?????
Just for the record Bill AND Greg, I seriously doubt that
anyone interested in this particular unit really cares too much whether or
not it's specs are "up to snuff". It is offered more for it's collectability
than for it's "Brute Power" so lay your fears to rest that I might be trying
to Rip Off the citizens on your beat clamoring to get at this Contest Grade
amp! :-) :-) . Notice I did NOT forget the Smilies either Bill.
Well Folks I sure hope that will teach Yaesu to try this
again while Bill & Greg are monitoring the NewsGroups! Bravo Guys! Glad to
have you aboard!

# 4298. HQ-140X audio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-09 18:29:11 UTC
From: Bill Ogden <ogden@us.ibm.com>
Message-ID: <3CDABFF7.E072824D@us.ibm.com>
Source record: 41976

I recently acquired an HQ-140X. I realigned it and it seems to work very well. (Image rejection above 10 MHz is terrible, but that is another issue.)

The audio is too loud. Barely turning the audio control creates a loud volume (into stereo headphones --- probably 4 ohms, but am not sure). Plus the audio is a little too "bright". Is there a simple reason for this? I notice that one part of the large "can" capacitor (the section that is 10 mfd @ 50 volts) appears to be used for a cathode bypass on the audio tube. Would a decaying part here cause my problem? There is a hint of 60 Hz hum in the receiver, probably meaning that other sections in this capacitor are failing. (I intend to look for a replacement at Dayton, if I manage to get there.)

Thanks,

Bill
W2WO

Bill,

Most of us that redo the old boatanchors have found it advantageous to change out all of the electrolyitc capacitors and the paper capacitiors especially the "Black Beauty" style (The black molded caps with color code). It took me a few tries before I got this through my very thick ham skull. As decoupling or bypass caps they lower the applied voltage and as coupling caps may impart a dc bias on the stage they are coupling to. Some go beyond that and change all the capacitors no matter what. I'm not in that camp but I do the Black Beauties and the 'lytics and have acheived very worthwhile results from the practice. i.e the radio sound like it came back to life. Resistors do change value and tubes do get weak with age or even short but I troubleshoot them one at a time. BTW I've done three Hammarlunds and they "Clean up nice." Good luck with you HQ-140.

Some wild guesses about equipment. I believe National was one of the sponsors, but they had no portable SW receiver using 1 and 3 volt filament tubes at the time. Hallicrafters did, the S-39, but the question arises as to the trade-off between battery weight and number of spare tubes to carry, since they were so electrically fragile. Also, the S-39 was more of a consumer radio than a communications receiver, and the NC-173 was among the best for the time. The HRO might have been better, but talk about a power hog! National operated several of their radios from BIG battery packs for various purposes, so this was not an isolated event. The tubes, IIRC were mostly 6 volt, 300 ma. filaments, and it was a number of years before almost equivalent 150 ma. tubes in miniature envelopes were available. It would have been an interesting project to modify something as complex as a NC-173 for 1 volt tubes and see how well it could be made to work. But I suspect there was not enough time to do a mod and thoroughly test it. Monte Carlo simulations were also some years in the future.

The 2E30s were common at the time in mobile radio equipment, and military stuff, and were a miniature tube with known performance and reliability. I am not aware of a direct heated tube available at that time with similar characteristics. By 10 years later, when I was beginning my radio design efforts, there were lots of choices, with more following in the few years before solid state took over.

Too bad there weren't some salt water activated batteries available, that would have solved a lot of problems. They didn't even have the advantage of Alkaline technology, relying on standard Le Clanche cells. Pretty poor power to weight ratio.

If someone undertook this effort in at this point in time, all they would need is a Iridium handset, a small gel-cell, and a big solar cell.

Indeed, it's a fairly valuable item. PLEASE preserve it!
There are only a few WS52's left (I'm working on the restoration of one).
It's not quite the descendant of the WS19, in spite of the similarity of the
tuning knobs. The WS52 consists of separate transmitter (100W CW), receiver
and power supply units in one case, whereas the WS19 (typically 20 W CW) is
a true transceiver with a VFO common to both the receiver and transmitter.
I bought a "Coil Aerial Tuning No. 2A" for my restoration in the UK and had
it shipped it to the US.

There is a web site for our WS19 (and other WS models)collectors/users group
you can peruse, at http://www.qsl.net/ve3bdb/ . you can offer it there for
sale at the "QM Stores".

Best regards from the US,

Meir WF2U

# 4310. 183 Oscillator Freq

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-10 11:01:19 UTC
From: jwodell@provide.net
Message-ID: <3cdba72f.1656120@news.provide.net>
Source record: 41988

I recently acquired an NC-183(rig of my youth).

But there is a problem in interpreting the manual. They state that the hf oscillator should be _above_ the receiving frequency. That makes receiving on 7.000 mhz require the oscillator to be at 7.455. 455kc is the if.

But further reading in the manual states that you should be able to hear the image at 7.000 - 2x0.455 mhz, or 6.09 mhz.

That implies that the oscillator is _below_ the receiving frequency.

It's sort of academic, for the trimmer won't move it down there, but I need an old time genius. Please e-mail me at jwodell@provide net if you know! I have an accurate generator, and good frequency meter.

Thanks

I was a little surprised when I open the receiver. There were no paper cacacitors anywhere. (At least, as I remember paper capacitors: round tubes, usually with wax on them.) There are a lot of .02mfd disk capacitors --- don't know if they are original or not, but they look good. I spot checked some of the DC voltages and they all were close to the values in the manual.

Several people suggested I check the audio pot --- someone may have replaced it with the wrong type.

Bill,

Thanks for your comments.

I don't have the skills to change the circuit to use MOSFETs. Even if
I did, this is a very compact layout and just changing package types
would require a new circuit board. I think that the path of least
resistance is just to find replacement devices.

Thanks,
Mike WA7ZPU for W7ASU

Hello,

I have refinished a number of front panels and bezels. It is pretty easy
to do yourself. The bezels are brass (!) - I have used black epoxy
paint that is a sort of semi gloss; for panels a machine gray paint from
Ace hardware. I have always tried to do in the summer time when very
hot and dry. On the panel, a primer coat is best, then the actual
paint. For lettering I use an old white paint stick from Brownells gun
supply. The trick is to wipe white paint into lettering thoroughly and
then gently white off with clean rag soaked with mineral oil. Works
great!

I'm in desperate need of a service manual for a Gould Advance sweep
generator, model SW100.
I've searched the web over, found one guy in Europe that had one for sale,
but was searching
for a manual as well.
If anyone has ideas where I might find one, I'd be very grateful (and
indebted to you for life).

Thanks!
Mark

==========

Jerry:

The LO is 455 kHz above the signal frequency. When you tune the
receiver to
6.09 MHz, the LO is at 6545 kHz which is 455 kHz below 7.000 MHz.
That is why you hear the 7.000 MHz signal when the receiver is tuned
to 6.090 MHz.

The important factor is that you are tuning the receiver to 6.090 MHz
so the LO (at 6545 kHz)is 455 kHz *below* 7.000 MHz. But, the LO is
455 kHz *above* the frequency to which the receiver is tuned. Now if
you leave the receiver tuned to 7.000 MHz and tune the Signal
Generator to 7.910 MHz, you will hear the image since the LO is now at
7.455 MHz which is 455 kHz *below* Signal Generator frequency of 7.910
MHz.

Even then the peak versus average power ratio
would have to be quite high.

In practice I've seen 200 PEP watts out per
sweep tube. For 5 that's 1 KW out. With
2 KW in the efficiency is only 50%. That's
low for a linear situation and not dissipation
friendly. It all depends on the plate voltage,
the bias, and the peak to average power ratio.
Sweep tubes can handle plate voltages that
are well in excess of their max rating. When
biased correctly that allows them to produce
a very high peak wattage while staying within
their dissipation ability. I'm not saying that's
what Yeasu did--I'm just saying that it's possible
and is the reason why you hear things about
CB amps that at first glance may not seem
possible.

# 4329. FS: Hallicrafters SX-42 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-11 00:45:53 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <udoqg1bqcrev63@corp.supernews.com>
Source record: 41855

For sale, one 1947-ish Hallicrafters SX-42 in working but somewhat ugly condition. I'm selling because we are moving and I need to downsize...very soon.
See pix at: http://ftp.bay-town.com/~p15218/Images/SX-42/

Positives:
1) It works pretty darn good on all but one band.
2) All the knobs are correct and in good shape.
3) Tuning mechanism very smooth. Bandspread lock knob works as it should.
4) All the controls are in good shape as are the switches.
5) Sounds very good in all modes, FM is real HI-FI!
6) The chassis looks pretty good.
7) The front plastic trim pieces and the meter look very good.
8) It has been recapped with new disc ceramics and tantalums in low volts areas. Some out of tolerance resistors replaced.
9) No extra holes drilled in the chassis or cabinet. Both appear to be stock and not dented.
10) Comes with copy of the Sam's photofact

Negatives:
1) Needs front panel redone or replaced. New ones (maybe repro?) are about $110
2) Cabinet needs stripping, sanding and repainting. Lots of surface rust but it is very restorable. Needs elbow grease and paint.
3) 15-30 Mhz band is about 6-10 dB lower sensitivity than the other bands. I never did dig into this to find out why.
4) The meter needle sometimes sticks at the high end. Probably repairable or just a light tap "clears" it.

I'd like to get $175 for this famous boat anchor but I really have no interest in shipping it. I am conveniently located about 20 miles south of Detroit Michigan. Slim chance I might be going to Dayton in a couple of weeks and I might be able to bring it along for a buyer.

# 4331. FS: Hallicrafters SX-42 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-11 00:49:45 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <udoqnclfvc1gbc@corp.supernews.com>
Source record: 41856

For sale, one 1947-ish Hallicrafters SX-42 in working but somewhat ugly condition. I'm selling because we are moving and I need to downsize...very soon.
See pix at: http://ftp.bay-town.com/~p15218/Images/SX-42/

Positives:
1) It works pretty darn good on all but one band.
2) All the knobs are correct and in good shape.
3) Tuning mechanism very smooth. Bandspread lock knob works as it should.
4) All the controls are in good shape as are the switches.
5) Sounds very good in all modes, FM is real HI-FI!
6) The chassis looks pretty good.
7) The front plastic trim pieces and the meter look very good.
8) It has been recapped with new disc ceramics and tantalums in low volts areas. Some out of tolerance resistors replaced.
9) No extra holes drilled in the chassis or cabinet. Both appear to be stock and not dented.
10) Comes with copy of the Sam's photofact

Negatives:
1) Needs front panel redone or replaced. New ones (maybe repro?) are about $110
2) Cabinet needs stripping, sanding and repainting. Lots of surface rust but it is very restorable. Needs elbow grease and paint.
3) 15-30 Mhz band is about 6-10 dB lower sensitivity than the other bands. I never did dig into this to find out why.
4) The meter needle sometimes sticks at the high end. Probably repairable or just a light tap "clears" it.

I'd like to get $175 for this famous boat anchor but I really have no interest in shipping it. I am conveniently located about 20 miles south of Detroit Michigan. Slim chance I might be going to Dayton in a couple of weeks and I might be able to bring it along for a buyer.

# 4332. FS: National NC-46 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-11 00:51:04 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <udoqppgkisbkda@corp.supernews.com>
Source record: 41857

Have one in nice shape. Pictures in
http://ftp.bay-town.com/~p15218/Images/NC-46/. The BA really needs almost
nothing as I re-capped (re-tubed and re-reristored where needed) it about a
year ago. The power switch is defective and hard wired on. If you are
looking for a "deco" style, late 1940s general coverage receiver, this is
it. I'd like to get $75 for it and would prefer pickup in the Detroit
Michigan area. I might be going to Dayton and might be able to bring it for
a buyer.

Another excellent post.

It really makes me happy when someone
takes the time to rebut the "amplifier com-
plainers."

# 4334. Equipment for 60 Meter Band?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-11 02:06:08 UTC
From: cacutts@mindspring.com
Message-ID: <abhuag$4n9$1@slb4.atl.mindspring.net>
Source record: 41862

Anyone know what boatanchors will work the 60 Meter band that the FCC seems to be giving us sometime in the future? I've already picked out my Hallicrafters HT-20 along with my Collins R-390 or R-388.

I am looking for a Johnson matchbox that is in dire straights. I have a antenna project in mind and I want to build me a remote tuner using the matchbox components if I can find them at a reasonable price. If you have one out in your garage that is in bad shape and could be used I would love to put it to good use.
Thanks all....K7FU

For TX, I read somewhere that the Johnson Viking family has wide enough tuning range in each stage that it can cover any HF frequency for which you supply a xtal or VFO signal.

That's for AM and CW. By the time SSB was big, Ham rigs didn't have that wide a tuning range. Maybe a Valiant with the outboard SSB adapter would cover it.

Any idea when the 5 MHz band would open up to hams? 73, Mike K. AA1UK

Drake C-Line:
T-4XC (27K), R-4C (23K), AC-4, MS-4. R-4C has Sherwood CW filter mod (switch on rear panel in existing hole), New product detector board and audio board. All works well. With original manuals. Some light scratches. US $550 + shipping.

Drake TC-2:
2 meter transmitting converter. Works very well - 85 watts out. No front panel scratches-few light cabinet scratches. US $275 + shipping.

Drake CC-1:
VHF Converter box with SC-2 2 meter converter, SCC-1 xtal calibrator, CPS-1 power supply. Converter and power supply work but have never plugged in the calibrator. Some corrosion on inner part of copper chassis. $225 + shipping.

Drake T-4XB:
Working but not pretty. Front panel is OK but cabinet needs paint. Aligned and putting out 90 watts or better on all bands. C-line main tuning knob with original B-line knob skirt. US $100 + shipping.

Drake FL-500;
500 hz CW filter for R-4C. Works fine. $75 + $3 shipping.

I believe this kit dates back to the 1970's or early 80's. This is model
EC-1200 from Eicocraft's series of educational electronic project kits,
similar to the ones offered by Allied, Radio Shack, Lafayette, Heathkit, and
others back then.
Antique radio buffs can use this to bradcast Old-Time radio programs and
music through their display radios.

In part, the description on the back reads:

"...you will be able to broadcast voice, music, and any audio signal through
any AM standard broadcast radio..."

"...TUNABLE to a vacant frequency on your AM radio..."

"Transmission range is 50 feet or more, depending on antenna length..."

Ending Sunday.

Tnx for Looking,
Tom

I need (need? that's a relative term...) another R-392 for a second
GRC-19 setup. I'll buy for the "going" and/or trade. Available for
trade, I have the following items:

U S Navy RBC HF receiver, very good w/ hb ac supply. w/ Book
U S Navy RBM HF receiver, very good condx. w/ hb ac supply, w/ Book.
BC-348R, good condx., works perfectly, w/ hb ac supply. Not modified so
dyno will drop-in and work. Might include rack, plug, and original
cable assy. Book.
BC-669C, nice, re-capped, works, no p.s.. w/ Book
Viking Challenger transmitter, nice, works fine, w/ book.

jpeg's available.

Thanks for the look. de K3HVG

# 4359. Ballast Tube for HP410B

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-11 23:13:43 UTC
From: bg998@FreeNet.Carleton.CA
Message-ID: <abk8j7$4fu$1@freenet9.carleton.ca>
Source record: 41887

Would anyone have a 6-4 ballast tube for the HP 410B VTVM?

Alternatively, can anyone suggest an appropriate resistor-diode combination that would simulate (however poorly) the action of the 6-4 ballast tube?

Thanks,
... Martin VE3OAT

For what it's worth, the other posting originated through Google.
The perpetrator was at IP address: 216.231.240.175

which is _inside_ city government at Escondito, Calif.

It is possible it is a public-access machine at the Library,
but it looks to me that it is more likely on some employee's desk.

The other possibility is that the machine was exploited by somebody remotely,
in which case the trail dead-ends.

# 4369. FS: HR Magazines

# 4371. RF connectors on older EICO test gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-12 07:27:54 UTC
From: Jochen Roth <jochen@this.is.invalid>
Message-ID: <abl5hq$fvf$1@reader1.panix.com>
Source record: 41799
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hello,

I have an old (50s) EICO signal tracer and a couple other pieces of equipment from around that time, like a VTVM.

I want to find out the specification for the connectors used by most of these pieces, and perhaps a source. I'd rather keep the old connectors than replace them with newer BNC pieces.

Size is similar to PL259, but with a shorter thread, and without the prong that the PL259 type connectors use. Likewise, the jack does not have a hole. The hot connection is made by the solder ball created by soldering the cable to the connector.

Thanks in advance for any help.

Jochen

# 4372. Harris ATU - RF3281 for sale

Harris RF3281 ATU designed for use with the Harris RF3200 HF Transceiver
1.6Mhz - 32Mhz tuning range, will take 125W power (this is the output of the RF3200).
Used, no sign of water ingress internally and in excellent condition externally.
I do not have the rig to test it and I have no manual for the unit.
Have a look at these 2 pictures.

Instead of looking for RF connectors look under the audio connector section. This connector seemed to be popular for some of the old microphone inputs to old audio amplifiers and such.

This connector that you describe as an RF connector is actually a microphone one pin connector..they were used for all sorts of purposes ..One source is Surplus Sales Of Nebraska. may be available from other catalogs also. good luck Harold W4PQW

Steve

CT-160s come up regularly on Internet auctions, but usually located in the UK or Australia where shipping would be expensive (assuming you are in the Americas). Prices vary from $500 to $1500. Beware of those with missing or faulty meters, which are quite common, as replacements are virtually impossible to obtain.

It sounds like the microphone connectors made by
AMPHENOL, stock number 80-75-MC1F. They were in use as rf connectors in
numerous low-end signal generators in that era. John M.

But a BC-221 isn't much more than a very stable VFO with a great reduction
gear and good frequency readout. (And of course, a crystal calibrator
and the bits for beating it against the VFO.)

So unless someone was hacking up the thing, all you need is to feed
the output into an existing transmitter. The whole trick would be
whether or not there is enough signal to directly connect it, or if
you need some sort of matching network, or even a stage of amplification.
(And you might need the amplification anyway, depending on how well
the BC-221 buffers the VFO).

Things to watch. If I'm remembering properly, the unit covers two
ranges of frequencies, a low frequency and something maybe in the
broadcast band or shortwave band. It relies on harmonics get the
rest of the spectrum. So you need to discover what frequency
range the higher segment is. And hope that it hits a useful frequency
range.

I'm assuming this is the scenario any article would take, rather
than going into the unit and modifying the VFO. If you have to
modify the frequency determining elements, you may reduce the stability,
since the unit is supposed to be really well built.

I've used them in both the transmitters and transceivers without a bit of trouble. In fact that's what I have in my TR-4CW and T-4XC at this time. You MUST cut off pin 8 for them to work right.

Regards,
Darrell, WA5VGO

Source record: 41813

Have two Hammarlund keyers for sale, $45 shipped for both. Have one original manual. One has a problem with the sidetone; once keyed, it stays on continuously although the keying of the transmitter works fine. These are discrete component keyers and with one working fine, one should be able to fault isolate easily, if one has the time, hi. Replacement parts should not cost much.

Hi,

I was incontact with a Switchcraft Tech this past week, inquiring about a pendant switch and also asked about the availability of these microphone connectors. This is what those connectors on the old test gear are called. They are still being manufactured and are available through any Switchcraft distributer. They are NOT expensive nor obsolete, most distributers just won't stock them because they are slow movers.

Regards,

Charles

That is the old microphone connector. They are easily found I think, but are seldom used any more. Made by many companies, including Amphenol and Cinch-Jones and Switchcraft. Check out the latter; they are probably still in business and it may be in the catalog.

That's the old "microphone" connector. Looking at some old
catalogs, my guess is the Amphenol Series 75.

Hi,

Picked up an interesting item at a rally today and wonder if anyone has any info? It is a "Crystal Calibrated Wavemeter" Type TE149 MI 22064 made by RCA Victor Co. Ltd., of Canada in 1944 and covers 2.5 to 5.0 MHz. I'd particularly like to know the supply voltages as the power lead is fitted with battery connectors.

>be giving us sometime in the future?

One "dream rig" would be the Viking 2, with the matching 122 VFO's 11 meter position padded down to 5 MHz.

The ART-13 should be fine, too.

Any of the classic homebrew rigs and receivers with plug-in coils should be easily adaptable. Use a BC-457 or BC-458 for VFO.....

There are plenty of BA receivers capable of 5 MHz, but two favorites of mine are the BC-342 and a BC-453 with external xtal controlled converter.

Next problem: antennas.

I would not be surprised if it took a year or two for FCC to release the band for ham use.

Source record: 41826

Hi,
That connector is not an RF connector as such; it's just a shielded unbalanced audio connector, common on test equipment of that era. It may be possible to replace it with a standard, modern BNC connector, though the hole may be too large unless the BNC is mounted on a larger plate and that plate fastened behind the hole.
RF shielding was not a great consideration for that signal generator; in fact other signal generators used simple banana jacks for the RF output.

Source record: 41827

I have a nice Swan 600-R Custom with the 600hz cw filter installed. All tubes are in great shape and it has a solid and very stable VFO. All controls work as they should. Top surface of chassis is a mess, under side is excellent. Missing the aluminum insert on the large vfo knob and an one small knob. Front panel is very nice, and it is clean. All knobs are shinny and in great shape. Cabinet is also in very nice shape, not mint. I have been using it as an external receiver to my 700CX. It receives much better than my 700CX does. Noise blanker works very well. Peak and Selectivity controls also work very well. 100kc and 25kc calibrator work great. This is a very good receiver !!!

$220.00 + shipping

>Kinks published a scheme for using a BC221 as a VFO on ham bands.
>If I'm remembering correctly, does anyone have the details?

There may be more, but these are the articles I have filed:

* "Frequency Meters as Master Oscillators", QST, August, 1946, pp. 34 ff.

* "The BC-221 Frequency Meter as a VFO", QST, March, 1947, schematic on p. 44

* A VFO amplifier for the LM Frequency Meter (exact title is on a page I
don't have handy), QST, January, 1950, pp. 20 ff.

* Using the BC-221 Frequency Meter at V.H.F.", QST, January, 1950,
pp. 46 and 120

* "get MORE from your LM and BC-221 frequency meters", Radio-Electronics,
August, 1962, pages 63, 64, and 66.

* "Solid-State BC-221 Frequency Meter", QST, February, 1977, pages 35 & 36.

* "Feedback" for the above on page 39 of QST, April, 1977.

* "More on Solid-State Conversion of BC-221/LM Frequency Meters" on
page 59 of QST, December, 1979.

Also, while I don't know how close the BC-221 is to a BC-222, but page
135 of the January, 1951, issue of Radio-Electronics has a one-column
article on "BC-222 Conversion".

>Anyone know what boatanchors will work the 60 Meter band that the FCC seems
>to
>be giving us sometime in the future?

With an appropriate crystal, the Collins S/Line receivers will work any 200kc segment from 160 through 10 meters (and possibly beyond those parameters) so 60 meters shouldn't be a problem. I'm not sure if the transmitters will do the same, but I'd guess they do -- as well as the KWM2/2A (wish I had one...)

Then there's the good old R390/R390A that receive from 500kc to 32mgc.

Those are "Amphenol" microphone connectors. I believe Newark still lists them in their catalog. There's also a guy on the old radio newsgroup that sells complete cables for the old test gear including the connectors.

I sold two of my three bc221's at the dunstable downs rally for £25 each.

I have one left.
I'm going to the Drayton manor rally on Sunday next if your interested ill
put it in the boot and take it along.

it has no case but looks complete and has its own calibration book.

Regards Ron G4XOU bofars@ntlworld.com

I just received an Aircraft Radio Corp. catalog from January 1946.
They were selling their extra parts from
Command Set and other Defense contracts.

They also listed microwave stuff at 23.5 to 24.5 GHZ
including freq meters, attenuators and many wavegides.

I wasn't aware that we were doing anything serious
at 24.5 GHZ in 1945. Can someone elaborate?

Hello all,

I find myself in a situation where I must make an interface cable for the Kenwood TS-520 and it's matching VFO-520. I do not have the manual for the VFO-520. Would anyone be kind enough to provide me with the pin outs for both ends of the cable? Any help would be greatly appreciated.

To save bandwidth, please respond via e-mail to: rjones@mail.cccd.edu.

Thanks in advance,

Rick, KG6RJ

Allen,

Is this a real possibility? I know there have been some experimental
stations licensed over there for 5 MHz but I'd be interested to know if
this is an international allocation the FCC is seeking or just a local
"anomaly", rather like our 70 MHz or your 220 MHz band. Plenty of BA
gear around that will work there, I must get my GRC-9 back from the
local military museum!!

Hi,

According to the excellent book 'Tube Lore', the klystron 2K33 was introduced 3-20-46 and operated on 23,5 - 24,5 Ghz Disc seal reflex klystron. Octal base, cap for reflector, hand-tuning knob, heater 6.3V 0.65A, 1.8KV, 40mW output. British design, further developed by RCA. There may have been other types, but I didn't find any that was introduced earlier than this in the book.

Best regards,

Arnold

# 4424. HQ-170 Alignment Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-13 22:48:11 UTC
From: Mark Bell <bell@blazenet.net>
Message-ID: <ue0gov20a8n6df@corp.supernews.com>
Source record: 41751

I completed both the IF and the RF alignment on my 170, and it sounds great --except for 40 M.

When I tune across 40M, nothing changes -- it's as if the main tuning cap doesn't do anything, and I sometimes hear distorted voice signals ( I think) around 7.0 Mhz. Yes, the tuning cap turns, and the other bands work and
sound great !

I used my Kenwood 830s and transmitted on 7.0, 7.1, 7.2, and 7.3 Mhz, and I can in fact hear my signal where I'm supposed to on the 40 meter band.

Sensitivity etc is OK on 40.

This worked prior to me doing the alignment, and I recall that on one of the bands I "teaked" the HF Oscillator Trimmer Adjustment coil on the underside of the chassis to far. It may have been 40 M.

I figure I need to start twiddling the HF Oscillator Trimmer Adjustment until I hear CW on the low end, or perhaps the HF Oscillator coil adjustment, and then realign 40M.

Any ideas before I got "a twiddling" ?

Thanks

Mark K3ZX

Sounds like you may have cracked the mica insulation on the 40 meter trimmer and as a result, the cap is now shorted. Back off the screw on this capacitor and see if the short clears. You may have to replace the mica insulation but you may be lucky and just have to loosen the tuning screw. Good luck!

Could it be that maybe you tuned one of mixer, osc or rf to the image
frequency? I'm not sure if this is possible on the 170 but it's worth a
thought.

I've never seen an HQ-170 but I'm guessing that the circuit is similar
to the SX-101A. If so:

```
tuned 1st IF 2nd 2nd product
RFamp --> mixer -->amp -->mixer -->IF amp -->detector -> audio
A A A
| | |
osc vfo bfo
```

The parts that are specific to the bands would be the osc and tuned RF
amp. There might be some band specific circuitry in the VFO but I'm
guessing the problem is a around the front end of the receiver.

Sounds like you got everything after the 1st mixer working great.
Maybe there's a bad part up front. In the SX-101A, there's a bunch of

LC circuits that are switched in and out. One component out of spec and the receiver will be dead on that band.

# 4429. HQ-170 Alignment Update

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-14 00:59:22 UTC
From: Mark Bell <bell@blazenet.net>
Message-ID: <ue0of58cuc0890@corp.supernews.com>
Source record: 41756

Well, almost success !! The RF trimmer adj didn't do anything. However, I carefully twiddled the RF Osc Trimmer adj and it went "pop", and things are more or less back to normal. I realigned (IF & RF ) 40M. Sensitivity is good, but I noticed the following:

1. I have to crank the BFO all the way over to copy LSB on 40m. LSB and USB are fine on all other bands with BFO centered.

2. VFO linearity is pretty bad on 40.

Workin' at it......

Mark K3ZX

My Heathkit signal generator goes from 200 KHz to 20 MHz. Add a key in
series with the antenna and you're good to go. I've got 28 states so far
and I figure I can get a WAS in another forty years at this rate.

I have three new power transformers that would be ideal for a solid state kilowatt RF amp, high power audio amp or monster bench supply. These are real beauties, but very heavy - so you probably wouldn't want to pay for shipping.
Located in Seattle area. Specs are as follows:

(Primaries are the same on all three - dual 100/115V (200/230V), 50/60Hz.)

Xfmr #1:

One 55V secondary, tapped at 4V, 40V, 45V and 50V. Rated at 250A peak (6% duty cycle), using a bridge and 150,000 uF cap.

Xfmr #2:

Secondary #1: 50V, tapped at 30V, 40V and 45V. Current rating not known, but substantial.
Secondary #2: 28V center-tapped at 8A continuous, 50A peak (20% duty cycle), using a bridge and 50,000 uF cap.

Xfmr #3:

One 55V secondary, tapped at 4V, 36V, 40V, 45V and 50V. Rated at 100A peak (20% duty cycle) using bridge and 50,000 uF cap.

If interested in any of these, and able to pick up or willing to pay shipping, contact me, and we'll work an easy deal. Interested in trades. Can email pictures.

# 4435. Help Heath/Schlumberger HV power suppl;y 2717

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-14 11:55:57 UTC
From: vk2ua@yahoo.com
Message-ID: <3ce0fa16.11828046@news.zip.com.au>
Source record: 41762

I have one of these units and was wondering what is the difference between mine and a plain Heath unit? Heath I believe generally supplied kits, but this seems to be a commercially built unit? It came originally from an educational establishment, so was unlikely to be a kit.

Its a very useful piece of gear for testing military radios without power supplies or to bring up HT gradually on others.

I don't have a manual, but I guess as long as it works that fine!

A good xtal for CW use in the 80 meter "novice" band.
It is stamped 3724 kHz. -- in my 2-NT it actually was about 3724.5 kHz. Your mileage may vary.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1352445296

The current Ten-Tec Jupiter and Pegasus, and the coming Argonaut V will also do
60 meters whenever that band comes available.

Don't forget that the KWM-2 is 60-meter ready too. And I can even use my
Globe-King if I am willing to get new crystals for it.

It's not going to happen overnight, it may be a couple of years, but the ARRL is talking it up, quite a bit. You might check their web site for particulars. Just do a search for "60 meter band" or whatever.

> 73,.

I thought this was a bit premature, but apparently less so than I'd
originally thought.

A few weeks ago, a thread started up in rec.radio.amateur.equipment
about this 60meter band, and it was the first I'd heard of it,
even if the guy was asking if his rig would work on the band.

Surely he was misinterpreting something. I checked the ARRL
website, and there was a petition to the FCC for such a band:
http://www.arrl.org/news/stories/2001/07/26/3
and
http://www.arrl.org/announce/regulatory/5MHz/5-MHZ-PETITION.pdf
(I'm not sure how much overlap there is between those two pages).

So, while the original poster was talking like the FCC was about
to give the band to hams, it was only a proposal to the FCC for
such a ham band.

When this thread hit, I did some more searching. Apparently this
has gone up a notch. On May 10th, the ARRL issued this bulletin:
http://www.arrl.org/w1aw/2002-arlb028.html
that says the FCC has now made it a notice of propose rulemaking.

So there's going to be debate, but it's much more likely than when it was just a petition.

Of course, that still doesn't make it immediate. Those WARC bands took some years to be put into use, as the old users vacated. If there's no opposition or changes, it will probably be the same scenario, coming into use in a few years.

And since this is only an FCC rulemaking, it won't affect the rest of us. Though, it might be leverage at a future allocation conference for making the band world wide.

# 4444. Collins & Other Stuff @ Dayton

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-14 17:02:00 UTC
From: wrhood@exis.net
Message-ID: <3ce142bc.832306@news.exis.net>
Source record: 41772

We will be setting up Thursday so that Friday AM we will be ready, no waiting. Stop by spaces 3207 & 3208 and look at the stuff we will have listed below. None of it is of the highest "Collins Collectors Cult" standards, but it worth your stopping by and haggling a little. And remember....if you don't insult me....you wont get my best price.

75A4 with schematic on CD ROM
1.75 kHz Collins Filter for 75A4
32S-3 Transmitter
75S-3B Receiver
KWM-2 Transceiver
32S-1 Transmitter
75S-1 Receiver
516F-2 Power Supply (2 each)
312B-4 Console (3 each)
PM-2 A/C Power Supply for KWM-2 or KWM2A
Also various filters and misc. parts for Collins equipment

AND OTHER STUFF
A good rice-box, IC-756, w/ FL-223 Filter (1.9 kHz SSB), New power cord, manual & box.
Great Boatanchor Receiver - Hallicrafters SX101 w/ manual
1950 "PRC" Tube Tester
Variety of old tubes (tested)
A couple of 2 meter FM Transceivers
Simpson "270" Multi-Meter

See y'all at Dayton, no internet inquiries now, if you are interested stop by, touch the stuff and enjoy the conversation.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 19th 2002
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

SEASON PASS + Advance Discounts

A sellers discount season pass is available which
offers a 33% discount. See the advanced registration
form below for full seller info.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and

# 4458. HAM RADIO BOAT-ANCHORS AND MANY PARTS - FREE TO GOOD D/FW AREA HOME

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-15 01:50:28 UTC
From: syrynx@charter.net
Message-ID: <ue3fuvsu4u8cd4@corp.supernews.com>
Source record: 41786

(Also posted to dfw.forsale)

This is all tube-type gear from the 1940s to 1960s.

Possibly intact units include:
BC-453-B receivers (190-550 KHz)
BC-455-B receiver (6-9.1 MHz)
NRI Professional Model 68 tube tester (with operating instructions and tube charts)
Homebrew double-conversion 40 meter receiver
Homebrew 40 meter CW transmitter
RME MB-3 (if you know what this is, you probably want it)
Heathkit model 10-4541 oscilloscope (I didn't build this and don't remember how I acquired it)

Parts:
Many tubes (most are used, a few are probably NOS)
Transmitting variable capacitors
TV receiver power transformers
Wire

...plus lots of other components-- some loose, some in abandoned homebrew projects, some in incomplete surplus equipment.

As with anything free, there are catches:

--This is an all or nothing, first come, first served, winner take all offer; if you want any of it, you must take it all.

--I can't guarantee that anything works.

--You must pick up everything at my apartment in Hurst, TX. It'll all fit nicely in a pickup truck; a smaller car might require two trips.

--Among the components are oil-filled capacitors, which contain polychlorinated biphenyls (PCBs). Legal disposal of these devices becomes your responsibility.

73,

John, ex N5JP, ex K7JNS

From: Kenneth Scharf <wa2mze@bellsouth.net>
Message-ID: <3CE2AF1D.1FC29AE@bellsouth.net>
Source record: 41650

Almost all WWII radio gear operating above 400mhz was used for radar or FFI (friend or foe id) type stuff.
The FFI equipment was basicly a radar transponder that send back a ping when it was pinged with an encoded reply. If the reply didn't match what was expected, you probably assumed you had a boggy comming at ya.

The APX6 was one sort of FFI rig operating in the 1000mhz region. Lots of hams put those on 1296mhz in the 60's when there wasn't anything else on the band. There was another WWII FFI rig popular in the 450 mhz band.
When these rigs were de-commissioned the self destruct devices built in to the radio to prevent it from falling into enemy hands was supposed to be removed, but sometimes that didn't happen. A few of the conversion articles on these things warned hams to be carefull, and look out for the thermit bombs that might still be inside!

Yes, a ceramic mike would be fine. A fairly high-output dynamic mike with
a step-up transformer would do it too.

Many crystal mikes go bad as they age because the seal around the crystal
fails, they absorb atmospheric moisture, and turn to goo.

Hey Dan,
Regarding my post on the NGs attempting to sell my
FL-2500. You might want to consider, and I would very much appreciate your keeping your snide remarks to yourself as they pertain to my gear and attempt at a sale. I'm really sorry that we all do not choose to operate with classy Henry amps and that this upsets your apple cart. If you are even marginally familiar with these old amps, you know full well that the tube complement that Yaesu chose for this particular design is indeed capable of 2KW INPUT. They used a pair of 6KD6s in the entire "F" line where it produced 560 watts input. Is it such a stretch that 2 KW is possible with 5 sweep tubes?? If you feel the need to take someone to task over these specs, address your gripe to Yaesu. While you are at it you might also want to look up W7TI and K9OY as they seem to share your opinion on this issue. In the mean time why not try to do something a bit more useful with your time instead of cruising the NGs like a common troll looking for a cause to uphold and casting doubt in the minds of those that might actually be considering adding this piece to their lineup. I'm quite sure you can appreciate the niche this amp fills for collectors of vintage Yaesu and are further aware that it is not being offered for it's Henry style power output but for it's collectibility. Do you really think anyone give's a red rat's rump if the amp is as "pumped" as your coveted Henry powerhouse? The unit would simply make a nice "completer" for an OP that has the rest of the lineup and therein lies it's appeal.

He's kind of right, though. The FL-2500 isn't really usable for commercial
service. It's pretty underbuilt for the power rating, and it dates back
to a day when the 6KD6 was cheap and plentiful and could be regularly replaced.

Today the 6KD6 costs a bloody fortune and there aren't enough good ones out
there for regular replacement, so to keep an FL-2500 operating probably
means reworking it for a standard transmitter tube. This isn't really all
that difficult, honestly.

So I think of something like FL-2500 as a project box with a nice power
supply and nice filters in it, that you could build a good linear into
without all that much work.

Well, lets see. 560 watts on two tubes divided by 2 = 280 times 5 =
1400. Still seems a little
short of 2000.

Maybe you might want to consider a disclaimer in your advertisements
to the effect that: "Even
though this amp may have been advertised by the manufacturer as a 2kw
amp in reality it comes
no where close to that".

Then it would probably not look as though there was any dishonesty
intended in the add. Mind
you that I am not accusing of any. But I can see how it could be
easily misconstrued to be that.

As written it could also be misconstrued as honest fact by some of the
newer people that may
not be wholly familiar with the piece of equipment. I am sure that you
would not want that kind
of misinterpretation.

I am also pretty sure that most of the members of the list would
prefer to have items listed for
sale described as honestly as possible, as it reflects the image of
all that use the list. I know that
I would not like to see this list known for dishonest or shady
listings and therefore be avoided
by many users.

Again, not making any accusations just suggesting that you might want
to clarify your add a little
further.

Well said Steve,

NG's are full of know it all trowlers. Here are the specs on your amp.

CIRCUIT - Grounded Grid Class AB
FREQUENCY COVERAGE - Ham bands 160 through 10 meters
PLATE INPUT - 2000 Watts PEP, 1500 Watts CW, 300 Watts AM
PLATE VOLTAGE - 1250 Volts DC in SSB Mode, 900 volts DC in TUNE/CW Mode
DRIVE REQUIREMENT - 100 Watts PEP or less
INPUT IMPEDANCE - 50 ohms, unbalanced
OUTPUT IMPEDANCE - 50 ohms, unbalanced
THIRD ORDER DISTORTION - 30db or better at 1000 Watts PEP
TUBE COMPLEMENT - 5x 6KD6
COOLING - Forced-Air Cooling
POWER REQUIREMENT - AC 100, 110, 117 Volts 50/60 Hz 18 Amps or AC 200, 220,
234 Volts 50/60 Hz 9 Amps
DIMENSIONS - 14 1/2" Wide, 6 1/4" High, 11 1/2" Deep
WEIGHT - 44lbs

I would bet that there are a few hams who would be interested
in this amp more as a collector's item than anything else.

I don't see anything wrong with the original post.

My suggestion to those few who object: Don't buy it!

Message-ID: <3ce414f8.889042946@news.tamu.edu>
Source record: 41667

I have a couple of modulation transformers that came out of a commercial AM transmitter site. One is HUGE. It is all two adult men can do to lift it (probably about 250 lbs). I don't know anything about it except that it came with my 3000 watt commercial transmitter I bought as a spare but it is larger than the one that is in it and couldn't possibly have been in there. The other one is an RCA modulation transformer and judging from the size (25 lbs?) and condition it appears new and probably good for 250 to 400 watts (call it an educated guess). I'm not wanting to give them away but will take offers right now or you can bid on ebay if I don't sell them otherwise. Both are offered as-is because I have no way to check them in service.

Rather than have a battle of wits with the unarmed, let me speak to those who may even consider sweep tube amps.
Consider these points:
A) Are these tubes still being made?
B) Check the current price of tubes (these tubes are about $60 EACH (and going up) for a TV sweep tube! Uh, that's $300 for the set and you still have very delicate tubes)
C) Considering they are no longer made what is your tube warranty? (none)
D) Sweep tubes were NEVER made for transmitting duty (hence TV sweep tube name) and are therefore VERY unforgiving.
E) If you try to get anywhere close to 2KW input, just keep a huge a supply of spare tubes on hand.
F) For the same money as this gem listed, you can get an SB-220 or SB-221 with MUCH more rugged 3-500 tubes!
G) For LESS money, even an SB-200 is a far better buy and will last you a long time.

I just hate to see people take advantage of those who may not know any better.
Now that you do, it's still up to you.

And the previous buyer backed out? Hmmmmm, wonder why?

All of what you say is undeniably true but your being a commercial
concern kinda taints the whole comment.
So, since I am a regular goober, let me post it again :-) to get the
proper effect.

Now, all that aside, I don't think anybody in their right mind should be
paying 500 bux for that Yaesu amp simply for hoss-power, but we are in
the era where vintage gear demands a premium for a fella that wants to
'recreate' a vintage station or whatever and I applaud that.
In that context, having to send a dog-sled team into St.Petersburg
(Leningrad) to fetch a new set of tubes is a small price to pay.

I've been a Ham for 30 years and have just as much right to my comments as anybody. Certainly no less because of my professional associations.
What commercial comments did I make?
Last time I checked, Heathkit made the SB-200, 220, and 221 and Radiodan is not a dealer for them!

Thanks for the great info on sweep tubes, especially the pricing. On
the other hand, I've been following the thread and Steve is hawking the
amp as a "vintage" set for "collectors" and not "users". Cut him some
slack.

If Yaesu advertised the amp as 2KW, then your beef is with Yaesu and
not Steve.

Sweep tubes... I have an SB2LA somewhere in storage. I'll bet that'd
go for big bucks on eBay. It probably should be named SB1.3LA from what
you say.

But, yeah, for amps, I'd go SB200, SB220, Henry 2K, 30L1, good basic
units.

I'm working on an SB200 that I bought on eBay, it's a solid unit, good
tubes and transformer. Cosmetics are an 8+ on 1-10 scale.

It had a couple bad resistors in the metering circuit and I think there's at least one bad cap in the HV PS.

The HV read 0 when I got it. I traced the problem to the voltage divider (with a lot of help from the Internet.) and replaced the resistors with 2%. The meter reads 1,800 VDC now, still a little low, that's why I'm guessing that the caps are soft too.

The Harbach powerboard will fix that. Like Viagra for SB200s.

I've been going through it. I've tightened up the knob ferrules and skirts using a drop of superglue. After 30 years, the knobs are loose.

I'm lubing the controls. I'll be adding the meter bypass mod, dropping the filament voltage, and generally bringing it to better than new condition.

I'm not interested in doing a "restoration" so much as re-engineering it for daily use. The previous owner installed the Harbach soft-switch and soft-start.

Flaming in a NG from a dealer is very poor business practice. If someone asked for your advice, which they have not, then a e-mail to the query would be more appropriate. I would not consider buying anything from W7RF because of his attitude, which I am sure carries over into his RADIODAN, which sells amplifiers.

If you need to replace the caps in the SB200 there is no need to replace the board. I replaced the caps in mine awhile back. Got some caps from Mouser, the snap in type. You only need to drill 3 or 4 small holes in the board to make the new caps fit in the old space. Some will fit without drilling. Some you need to drill a small hole for 1 pin. There is enough foil on the board to line right up. New caps are only a few dollars each and you can end up with more capacitance than the original.

If the old ones are not snapping and pooping or one or two getting hot, they are probably ok.
The metering resistors are known for changing value in those amps.
If you get 550 to 600 watts out of the amp things are probably ok.

Well! Ordinarily nothing would make an parent prouder than to see one of his "creations" gain strength and fly on it's own! However it is time that this thread take it's rightful place in the cyber trash heap as my wits has been deemed "Unfit for Battle". Dan has once again endeared himself with the masses as he has done so often in the past by flaunting his 30 year old Ham ticket for all to see and assuring us that he is simply "looking out for the fledglings" (spell that one "Buy Henry") in our hobby as he "just hates to see people take advantage of those who may not know any better". Of course we are all expected to pay no mind to the fact that his signature line does indeed reek of his commercial associations and "hawks his wares" with every post. I imagine that after all this Dan still does not understand what possible appeal this amp might have for some in spite of having been told time and again that the intended target was the vintage user/collector. As for Dan's price quote of $60.00 per tube, this tidbit is also self serving as I have NEVER paid more than $35.00 for a 6KD6. Your mileage may vary...But if this unit appeals to you from a collector standpoint do you really care much about the price? Dan is marginally honest about one thing though, that being that he does not deal in Heathkit. Does anybody deal in Heathkit anymore?
The "fly in the ointment" however is that he DOES deal in the tubes that these fine units use to keep them chugging along as this ad shows:.....
Have they sold yet Dan?
---
NEW 3-500 tubes, matched pair $260 + ship
SAME brand as installed in all new HENRY amps.
TWO year warranty!
73, Dan Magro W7RF, (President WARC 1999, member SCDXC, SCCC)

A trip to our web site is worth the click!
---
I have no desire to continue with this any one any longer and thank all for their input. In closing I wish to make it clear that no attempt was ever made to defraud anyone that might have expressed interest in this unit. I am a responsible seller and put my call out there for all to see. What would I gain by dumping junk on an unsuspecting buyer?? This was a targeted post and those not within the target group need not respond. In short, buy what you like but don't criticize others for exercising their freedom of choice. Dans comments placed my integrity in question, were shortsighted, unnecessary and

prove once again that he is simply a "busy body" with his own agenda (Sales) although he will swear that he was just watching out for the "newbies". "Stir the pot" if you choose to Dan but do it in your kitchen and not on the NGs.

'73 all!
Steve N2ET

Thanks, I did that when I first saw 0 VDC on the plate meter. The
diodes are good.

OK, I saw a write up about doing that on the web but it mentioned caps
from digikey. I checked the digikey price and 6 270 ufd would be only
thirty dollars less than a Harbach kit which gets me new diodes
and resistors.

The Harbach kit gets me a new circuit board. I'm guessing it's glass
epoxy rather than phenolic. A nice upgrade.

The phenolic is discolored near the power resistors.

I haven't put an antenna on the amp yet. I found one open resistor and
one that was 2X the spec value. I built a new divider chain using 2%
resistors that I checked with two DVMs. Now reads 1,800 VDC.

I've been tuning up the amp's mechanicals. This thing is fun.

Beautiful new (but no box) Johnson dual link coil with ceramic variable link inside. Looks to be for 20 meters, but I don't have a dip meter to see for sure. Comes with the matching new unused socket - 5 pin banana pin coil socket. High power coil - 500 watts I'd guess. Great chance to build a multi-band transmitter!

$5 to start and no reserve. Have fun and thanks for looking.

I have a good ART-13 transmitter MINUS the modulation
transformer. I can rig it with another transformer mounted
on the rear or sell it as is.
It is very heavy so shipping will be a problem unless you
live within 300 miles of Mojave, CA. then I will bring it
to you for $70. I want $200 as is or 250 with ext mod. trans.
Comes with original 28 v. dynamotor but no cables.
Paul N6GBV 760-375-4505.

Any low-Z mike will work, with a step-up transformer. On the other hand,
there are still plenty of high-Z communications mikes being made (even
the old Shure Green Bullet).

I like the old Turner mikes, but Fair Radio usually has a nice selection
of high-Z mikes in the $20 range.

Hello,

I have several of this antique globe shape German triode in stock. It is directly heated, an European 4-pin base and about 12W anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max. anode voltage is 400V.The valves are NOS, but the boxes are mostly in bad shape. You will find a picture at my web site. www.demostenes.no
Just search for RS 242.
Please contact me if you are interested.

Try the very common D-104 (non amplified) or a Shure 444 or an Astatic
10DA; all fairly common and easlily obtained mics. Also some of the
older Shure and Turner hand mics.

Mirage M100 HF Amplifier? I stopped by the Mirage booth (@ Dayton) & the guy who manages Mirage did not know of it. Appears to be 100 watt HF brick type amplifier.

Anyone know of this amplifier? Watts in/out? Schematic/manual?

I just bought one @ Dayton Hamfest. No manual. Appears to be 100 watt HF brick type amplifier. Looked on BAMA, etc. - no luck.

Any help will be much appreciated

Source record: 41708

This a VLF tuning unit that covers from 14 to 150Kcs in 3 bands. The dimensions are 6" wide, 9" high and 12" deep and on the back there's a 15 pin rectangular connector. It has a BFO and a built in attenuator and has an Impulse Gen. setting and connector, whatever that is? It has 9 tubes, 7 pin miniatures, and looks like it could be a very useable VLF front end. Just hook up filaments, B+ and tune to the IF. If anyone has a schematic, manual or can point me to some info I'd appreciate it.
tnx
hank wd5jfr

Try MFJ support (that should have been your other booth stop at Dayton after the purchase)

MFJ supposedly has the documentation, but at last call I had with them - they search and find based on telephone/e-mail support questions.

Telephone is best method for MFJ contact (they are terrible with e-mail or paper mail)

Source record: 41728

(For anyone who tried to contact me via email by responding to the earlier post, please try again; it will work now. (Bill - your phone is off-hook.)

I have three new power transformers that would be ideal for a solid state kilowatt RF amp, high power audio amp or monster bench supply. These are real beauties, but very heavy - probably 30-35 pounds each - so shipping may be costly. Located in Seattle area. Specs are as follows:

(Primaries are the same on all three - dual 100/115V (200/230V), 50/60Hz.)

Xfmr #1:

One 55V secondary, tapped at 4V, 40V, 45V and 50V. Rated at 250A peak (6% duty cycle), using a bridge and 150,000 uF cap.

Xfmr #2:

Secondary #1: 50V, tapped at 30V, 40V and 45V. Current rating not known, but substantial.
Secondary #2: 28V center-tapped at 8A continuous, 50A peak (20% duty cycle), using a bridge and 50,000 uF cap.

Xfmr #3:

One 55V secondary, tapped at 4V, 36V, 40V, 45V and 50V. Rated at 100A peak (20% duty cycle) using bridge and 50,000 uF cap.

If interested in any of these, and able to pick up or willing to pay shipping, contact me, and we'll work an easy deal. Interested in trades. Can email pictures.

Hi

Can't follow your email address, you obviously don't want direct
replies.

I had a broken glass on a similar Eddy set and got the local glazier
to cut one for me. There is nothing special about Eddy glass - just
get the size and thickness about right.

BTW I have a 680X and would be interested in how you get the front off
to replace the glass, as my dial is very dirty.

Thanks

Simon

I was lucky enough to find a good, clean TH-21AT handi at Dayton but it has no battery. None are available from the various battery venders but they say that they can insert new batteries in the old shell. I am searching for an old battery that fits the TH-21AT that has a good shell for refill purposes.

Please let me know by email if you have one that is available.

Thanks for reading,

The Drake TR-7, TR-7A, R-7, and R-7A have continuous coverage 160-10 when the factory approved mod (cut one foil trace on the motherboard) is accomplished. Another option is to install the AUX-7 board and program it for the band of interest.

Your post in reply to a legitimate FS post is commercial SPAM of the worst kind. You attempt to hawk your wares at the expense of an individual offering an item for legitimate sale. Most of us are aware enough of any limitations on this somewhat vintage piece of gear. Your comments are self serving and unnecessary.

His comments were not meant for "most" of us. They were meant for newcomers or those who are naive enough to believe Yaesu's claim of 2kw input to five sweep tubes. Dan did the ham community a service by pointing out the BS contained in Yaesu's advertising.

Those of us who have been around a while remember how Yaesu got its start - do the letters "C" and "B" ring a bell? This amplifier is CB rated if there ever was one.

# 4566. FS.... D-104 Microphone

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-21 02:24:27 UTC
From: Arthur Sowers <arthures@magpage.com>
Message-ID: <accb4r$3mg$0@216.155.0.50>
Source record: 41743

I have a D-104, on a G-stand (PTT 'bar' with hold-down clip), and mic cable with sheilded cord ending in (I think) a 1/4" 3 conductor phone plug. Its standard chrome except for the base, which is gray. If you want, I can determine the connector circuit. The cord is about 1-1/2 feet long. Its not an "amplified" mic, with circuit in the base.

I have not used the microphone in years, but it was just fine when I did use it. I used it with both a Collins 32S1 and Drake T4XB, both of which I don't have any more. I am not aware of any mistreatment that I would expect might have damaged the microphone. Right now I don't have any equipment any more that can accept the connector, and the equipment I do have all have their own microphones, that is why I'm selling the D-104. The back of the microphone and the top have some minor traces of scum/abrasion that I think should/might come off with a little metal polish and elbow grease. There is an original stick-on label on the top designating the manufacturer and "D-104" and I didn't want to fool with any restoration because a buyer might want to "restore" this differently than I might.

$35 plus shipping costs (USA states only) which I will look up when you tell me how you want it shipped and where to ship. I will insure it and mail with a return receipt transportation service and this will be added to shipping costs. I will spring for packing materials and packing. I would probably recommend against USPS and prefer UPS or FEDEX.

Please do not try to locate me and then call me on the telephone, any way, any time, for any reason. email only. I will answer _all_ email unless the email becomes voluminous and then I'll make a subsequent post to the NG. I might not answer email immediately, so please wait 2-3 days before getting mad. Please do not try to locate me and send a check or any money, etc.

Art, W4PON

New Program: WINDOM2.exe

The original Windom (1929) antenna has now fallen into the antique category. It is a simple 1/2-wave horizontal dipole fed over a single-wire transmission line of no particular length except that it has to come down near to ground level to be fed against ground just like all ground-mounted verticals. The trick of using a single wire feedline is made possible by tapping the line into the dipole at a short distance off-centre.

By tapping at the right place the vertical feedline can be approximately Zo-matched. The SWR can be reduced to 1:1 yet the feedline will still radiate. But since this fills in the nulls in the dipole's radiation pattern it will always be welcome.

As just described it was originally used as a one-frequency antenna. The main reason being that in the early days transmitters were capable of transmitting on only one frequency. It might have had something to do with steam-driven LF alternators.

However, in these days of tubes and transistors, it turns out the Windom is a multi-function, multi-frequency, multi-band antenna. Provided its height plus the length of the longest 'half' of the dipole is longer than about 1/6th wavelength at the lowest frequency of operation it has a consistently high radiating efficiency.

Its relative high base feedpoint resistance means that a very extensive gound electrode system is not necessary. But for multi-band operation a matching network is always needed. The program calculates the L and C values of an L-matching network. When a single series tuning component is all that's needed the program calculates that too. The loss in the L-network is taken into account when calculating overall efficiency. A coil Q of 200 is assumed.

A table of loss resistance values of the ground connection for various numbers and lengths of radials is included in the notes.

The antenna can be changed from Inverted-L, to Dipole, then to a T-antenna by lowering the dipole and sliding the tap along the wire. This will change input impedances and radiation patterns. Scope for experiments?

This deceptively simple antenna deserves greater interest and popularity - for both novices and old timers.

Download program WINDOM2 in a few seconds. See what makes it tick. About 51 K-bytes. No unzipping inconvenience.

Murr,
From the 'rediculous'(sic) 'land of fruits and nuts...hihihi"
Any CBer worth his salt can find a better amplifier, cheaper..and it'll
probably run 20kw with 5 sweep tubes :-)
I don't know what it is with some folks, but many will pay big bux for a
piece of nostalgia for their station.
Just watch the next SX-115 move at your local hamfest. There ain't no C
and B model. And there ain't many 'old codgers' who would sell one for
100 bux nowadays. (Thats what I paid for mine a looooong time ago).

## 4573. Decrease inductance?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-21 11:16:16 UTC
From: jwodell@provide.net
Message-ID: <3ceb2bc1.1941158@news.provide.net>
Source record: 41600

I just got a lovely old boatanchor. One of the main oscillator coils needs to have its inductance reduced, and I don't want to fiddle with the lovely thing (ain't ceramic pretty). Only about 200khz at 7mhz.

Seems to me that we used to put brass in to reduce inductance, and powdered iron in to increase it. They even made tools for that.

Simple, plain old coil. I guess they didn't worry about being exactly on frequency in those days.

Please reply to jwodell@provide.net if you have any ideas.

Will someone explain that to me. I've seen two SX-115's go for $1,500
on eBay recently. Also an SX-101A went for $400 and another went for
over $500. A guy I work with is bugging me to sell him my SX-101A.
I'm thinking of giving it to him. It's a nice receiver but -geesh-,
it's 40 years old and when I used it in the 1960's, it used to drift
and wasn't that selective.

Hello,

I have several of this antique globe shape German triode in stock. It is directly heated, an European 4-pin base and about 12W anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max. anode voltage is 400V.The valves are NOS, but the boxes are mostly in bad shape. You will find a picture at my web site. www.demostenes.no
Just search for RS 242.
Please contact me if you are interested.

Well, you have a schematic . Look at schematic for the value. Then use common sense for the type of capacitor, voltage rating, etc, etc. You probably have 400 Volt electrolytics .

Source record: 41619

Looking for input on some old equipment inherited recently by my cousin.
Might be that some of it would be desirable to hams that like older
electronic items. Stuffs been stored in dusty old garage. Have no idea as to
operational status of any of this (I'm to unknowledgeable to even be able to
check it out) List below;

1. Heathkit RF Signal Generator- 100 Kc to 110 Mc

2. Beco Impedance Bridge- Model 250-C

3. Aerovox Capacitance- Resistance Bridge
Model 76

4. Rider Chanalyst (RCA) Model 162

5.Audio Oscillator- Model 200A (just realized
I don't have mfg name on this one, will have to get back to cousin on it)

If you know anything about any of this equipment I'd appreciate anything you
can tell
me. Most of the items appear in good condition
under the dust. I believe the audio Oscillator is in worst shape
cosmetically, its in a heavy steel
case thats filmed with rust.

Hello,

I have one of these nice vintage power triodes in stock. Heater is 10V
4.8A, anode dissipation is 65W and max anode voltage is 1600V. The
valve is NOS and in its original box. You will find a picture and more
data at my web site - www.demostenes.no
Just search for RS 31g.
Please contact me if you are interested.

Regards,

Arnold Goks&#65533;yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

# 4597. WANTED: DEAD OR ALIVE - Still need battery for Kenwood TH-21AT Handi.

WANTED: DEAD OR ALIVE - Still need battery for Kenwood TH-21AT Handi.

I have a working TH-21AT handi but it has no battery. None are available from the various battery venders but they say that they can insert new batteries in the old shell. I am searching for an old battery (PB-21H or PB-21) that fits the TH-21AT and has a good shell for refill purposes.

Please let me know by email if you have one that is available.

Thanks for reading,

AL

From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3CEBBF73.61A8007C@ix.netcom.com>
Source record: 41627

I've posted photos of a very interesting European military radio
which I believe was an early attempt at an Armor set.
Also posted this notice to the ARC-5 reflector since
the set uses 1930s Western Electric light aircraft radios.
Comments solicited.
Photos are on alt.binaries.pictures.radio

# 4602. Drake tr4 questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-22 20:12:33 UTC
From: rmead100@aol.com
Message-ID: <20020522161233.07877.00000061@mb-fc.aol.com>
Source record: 41629

Neither Drake list seems to be as useful as they once were, so I decided to post this question here.

I have a tr4 which works, but I think 9mhz oscilator for the bfo, product detector is not working 100% correctly. It is supposed to show negative 3.8 volts on pin one of the 6gx6 oscilator tube, but instead shows that voltage positive. have tried new tube and xtal, but no change. Any suggestions?? I believe without the neg voltage reading, means oscillator is not working.

Separate question. The sensitiviy improves several s units when using the rv4 vfo to receive. Anyone else seen this one?

thanks
Randy

You can say that again. I have a pal who's holding 2,000 shares of Worldcom. Three years ago, it was worth $130,000. Today the same shares are $3,000.

Another pal was a retired multi-millionaire. He lost over two million dollars in Cisco Systems and is working again.

I'm wondering about the details of the "Demand" side of the equation.

I understand supply. The stuff wears out. Everyday, some ham dies and his grandchildren sends a KWM-2A to the landfill.

Where is the demand coming from? Do new hams want the old stuff? Are there a few rich old hams who have massive collections?

That isn't the right name for them, but I saw a Harvey-Wells over the weekend that looked for all the world like it was just from the factory. The little metal plate that said "Harvey-Wells" was all glistening and shiny, and I suspect was plastic. An old one next to it was dull and beat up.

All you boatanchor people out there, I'll bet, know who makes such things! Kind of like putting a new lady on the front of a Packard!

Hi,
If you find a perfectly good 221 dont hack it up. It is a piece of art and at one time it was the best portable field
freq. standard.

Dick,

Pardon me for butting in by why are you interested in this particular type of speaker? It's been my experience that the receiver/manufacturer specfic speakers of this era were not all that good. There may be exceptions of course but for the most part radio manufacturers were interested in a somewhat resticted audio response in the interest of "Intelligibility". I have used small and large "hi-fi" or stereo speakers with very good results.

Tony WA6LZH

I took a BC-603 out of the carton and used it a little as a tunable FM
IF It covers 20 to 30 Mhz. I think I saw it in a WW2 movie installed
in a tank. Not very big. It is worth anything ?? Mabye to a collector
that is restoring a tank or a jeep?? '49 Buick?? Make an offer.

It is in the movie "Sahara" with Humphrey Bogart.

I bought one at a hamfest for $5 recently.

From: Josuha <josuha@charter.net>
Message-ID: <ueqtav681oqk97@corp.supernews.com>
Source record: 41556

Is the Collins R/388 receiver front panel "silk screened" for the lettering or is the lettering "stamped" into the metal (Like the National 173).

I am thinking of looking for one for a restoration project and just getting my "duckies" inline to see what I'm getting myself into..: )

Thanks in advance. Jos

I can't speak for Dick, but some collectors want a correct matching speaker just for the sake of authenticity -- even if they run a secret wire out to a "higher-fi" speaker when the set's actually in use :-)

If it's unmodified, it is worth a modest amount.
If it's hacked on or drilled, it's junk box bait.

The lettering is silk screened, in white ink, onto the panel's coarse matte
finish dark grey paint.

>I am thinking of looking for one for a restoration project and just getting
>my "duckies" inline to see what I'm getting myself into..: )

There are guys who will do the repainting of the panel and the silk screening
for you, or tell you how to do it yourself.

This is a nice radio, sort of an "R390 Lite", as anyone who has picked up both
sets can attest :-) 73, Mike K. AA1UK

Hi,

I have some 6U5 magic eye valves in stock. They are unused and in
original boxes. The label is Haltron, but I am pretty sure that they
are rebranded US manufacture. The price is NOK 186.70 each and that is
about US$ 21.60

Hello,

I have several of these antique globe shape German triodes in stock.
It is directly heated, and has an European 4-pin base and about 12W
anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max.
anode voltage is 400V.The valves are NOS, and very nice to look at.
You will find a picture at my web site. www.demostenes.no
Just search for RS 242 in the left hand corner.
Please contact me by e-mail if you are interested.

FOR SALE:

Heathkit HW-17 classic 2m AM transceiver with microphone.
Dial glass is missing but otherwise very clean.
Pictures available on request.
Selling for $45.00 plus shipping.

Harvey Wells Bandmaster Senior TBS-50C all band AM-CW transmitter
In very good condition. Reported to be working when last used.
Front panel shows really nicely. Comes with a repro manual.
E-mail me for photos. Will sell for $135.00

CLASSIC 1940s-50s HOMEBREW TUNER.
What a beauty! Like a Johnson only better. You should see the
components and
the dials. This jewel has all heavy duty components including a
dandy of a roller inductor with turns counter, The variable capacitors
are
pretty large and looks like it would handle a kilowatt with ease.
The versatile circuit is configurable for either series or parallel
'T'
configuration. Has jumpers in front to change set-up easily.
Has built-in SWR bridge utilizing an E.F. Johnson meter with
controls for FWD, REV and gain. Case is made of hammertone finish
steel
with a removable lid. There is a small chip out of one of the knobs.
Otherwise it's excellent. E-mail me for photos.
Will sell this gem for $175.00 firm plus shipping

Heath HW-202
Classic Heath 2m FM mobile transceiver with plenty of chrome.
Comes with the microphone. Comes with the ORIGINAL (thick!) manual,
original Heath microphone, cables etc.
Has crystals in it for:
146.07 / 146.67
146.16 / 146.76
146.22 / 146.82
146.34 / 146.94
146.94 Simplex
Pictures available on request.
Untested - selling for $39.00 plus shipping

Heath HD-15 Phone Patch. Unit is in top condition
with all original knobs etc. Pictures available on request.
Reduced to $19.00

Yaesu SP-901P Phone patch / Speaker Accessory
Perfect to round out your FT-901 line.
Unit is in excellent shape but needs two small scratches touched up on the top. Front looks great, including the original knobs, meter etc.
Pictures available on request.
Will sell for $45.00 plus shipping

Homebrew AM transmitter with 1625 final plate modulated by a pair of 5881 tubes. Good iron inside.
Made from a nicely modified ARC-5 transmitter conversion job.
Has an older style 4-pin mic input, gain control etc. etc.
Appears to be made for 40m band and it has final tank of 17 turns silver plated copper 16-18 gauge wire on a 2" diameter ceramic form.
Pictures available on request.
Available for $25.00 without the two 5881 tubes or for $35.00 with them.
Shipping additional.

Source record: 41509

Gang - Came up with an interesting Yaesu NOS pc card. Has Yaesu Musen F2527000A part number etched on it. Its about 4.5 by 11 inches with a couple dozen ICs, several of the 40 pin type and in sockets, and about 24 various size cable connectors around its parameter. One of the large ICs is a 80C85A [CPU chip] and three are 8255AC [Input / Output chip] which leads me to believe its some kind of computer or control card. But for where or which radio? Any ideas? Anyone what to make an offer?

Thanks,

73 Bob W7AVK

# 4682. WTB: Old Yaesu Desk Mic

## 4684. dynamotor questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-26 00:48:17 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3CF030D0.2D227E11@ix.netcom.com>
Source record: 41512

As I understand it, dynamotors are an electromechanical
DC - DC converter. Some low voltage to a high voltage.
Now suppose I want to install a radio in a trolley or
subway car, where the supply voltage is 600VDC
Getting plate voltage is straightforward enough. But could
one use a dynamotor "backwards" to convert the 600VDC
to say 6.3V AC or DC for the heaters? I mention AC in
that maybe that would avoid an extra set of brushes, as
heaters don't care AC or DC.

# 4685. Re: dynamotor questions

In article <3CF030D0.2D227E11@ix.netcom.com>, Robert Casey
<wa2ise@ix.netcom.com> writes:

>As I understand it, dynamotors are an electromechanical
>DC - DC converter. Some low voltage to a high voltage.

Yup. They use the same field windings for both the high and low voltages.

>Now suppose I want to install a radio in a trolley or
>subway car, where the supply voltage is 600VDC

OK

>Getting plate voltage is straightforward enough. But could
>one use a dynamotor "backwards" to convert the 600VDC
>to say 6.3V AC or DC for the heaters?

Only if the machine were designed to work that way. Simply putting
HV DC into a "step up" dynamotor won't work because the field
windings won't be energized.

> I mention AC in
>that maybe that would avoid an extra set of brushes, as
>heaters don't care AC or DC.
>
That could work.

The way it's done in real life is that there are batteries on the subway cars
and an MG set or solid-state inverter converts the 600 VDC to a lower voltage
like 32 volts to run emergency lights, the control system and the radio. That
way, loss of third rail or trolley power won't leave the car in the dark with
no communication or control.

What trolley system are you considering?

# 4687. ARC-5 spline knob

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-26 03:44:26 UTC
From: Texas Sparky <texassparky@subdimension.com>
Message-ID: <9493AFEE30A5E3AC.6730F2F575E133D7.1B199853738A4989@lp.airnews.net>
Source record: 41515

Looking for a "stand alone" (no cable & control box) knob that will
fit an ARC-5 spline shaft. And ideas on a source?

Thanks!

Mike, WB5MYY

Greetings,
I'm searching for a schematic for my trusty, (up till this week) ICOM 290A transceiver.
It seems to have gone deaf after many many years of faithful service, some have said put it out to pasture, but I just want to give it a good physical and service..... I am having some trouble finding a schematic at a reasonable cost.
Does any kind soul out there have a schematic they could share with me?
I'm willing to reimburse for photocopy paper and postage..
Please contact me on the following e-mail or post a reply here

I'm in New Zealand
my call sign is ZL2VAH I'm in the call book

Source record: 41534

Excellent condition MN-2000 for sale. A few touch-up-able nicks in the original paint on the top cover. Front panel still has some sparkle.

Caps are smooth, and selector switches still have the crisp snap to them.

This tuner has lived in a non-smoking environment. Hi-Res (1600x1200) pics available on request.

The price is $265.00 shipped in the US.

This includes professional packing and insurance. I can provide references if you like. If no interest through these channels, I'll place the tuner on e-bay.

Email direct if interested to: KK4TL@AOL.COM

FOR SALE: EICO model 460 5" scope. Excellent physical condx,
unmodified. This item is part of an
estate our group is helping to liquidate therefore have not tested it as
do not care to get involved in
giving warranties, etc. In the worse case, it is 100% restorable. All
controls turn freely. Has all tubes.
No dings, knicks, dents, etc. in case. Going for the best reasonable
offer plus shipping.
No charge for packing and hauling to UPS/PO unless we can't find a box
then the cost
of the box would be extra. Shipping from central Florida.

# 4720. X Files shows "boatanchor"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-27 21:33:33 UTC
From: radioman390@cs.com
Message-ID: <20020527173333.06405.00000746@mb-cm.news.cs.com>
Source record: 41448

A rerun of X Files today showed Fox Mulder talking into a mike on an SX-28 (or so I thought!).
The SX-28 look-alike was made up of a large 5" RCA-type VU meter in the center, and two smaller Tripplet meters (2.5 in?) on either side. There were four "knobs" in pairs of two, which really were large industrial type pilot lights (1.5 in dia like you see in factories on motor controls). Red and Green colors. There were other switches and more knobs like an SX-28.

It's criminal how the "prop" department misleads theAmerican public: not only is the SX-28 not a transmitter, but it wasn't even a real SX-28 !

BTW this was the episode where Mulder goes back in time to WWII and is in a Nazi uniform.

Most likely 2000 ohm. Clicks loudly with tapped with 1.5v battery.
Has phone tips for connection to a receiver. Very good condition.
Made by American of Chicago. Probably from late 1950's.

Am looking for a Hammarlund SP-600 in great operational condition. Cosmetics aren't so important, though would like all original knobs etc. Mods are okay.

Anyone know where to find such a beast and roughly the cost?

Can anyone tell me what to look for? I know about the black beauty caps etc. and know there are about 39 different versions (not interested in VLF). Are later versions truly better than earlier ones?

Any help would be greatly appreciated. I'm located in the Boston area.

thanks,
paul

## 4731. FS: two Hammarlund keyers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-28 01:55:41 UTC
From: k9sqg@aol.com
Message-ID: <20020527215541.19690.00001045@mb-ck.aol.com>
Source record: 41459

One keyer works fine. The other keyer keys the transmitter fine but the side tone stays on all the time. With two units, and discrete components, trouble shooting and repair shouldn't be too bad. Have one original manual. $45 for both.

73s,

Evan

# 4732. HQ-170 Update

Message-ID: <uf5qc0c9pb1dc@corp.supernews.com>
Source record: 41460

Well, I finally got the 40M alignment problem solved. That was not a particularily unfrustrating exercise, but I learned quite a bit about alignment from it !! Thanks to Bruce AB7YD, Don W6QEY, and Al, W8UT for helping out !!

I put the radio back in the case tonight, and hope to find some time this week to swap the SX-101A for the HQ-170 and give it a whirl on the air.

I still need to perform the VR mod as per the serivce bulletin on the BAMA site, but need to get the resistor first.

While looking through the service bulletin, I did not see the noise limiter modification. When I crank the noise limiter all the way up, it essentially kills the receiver. I know I've seen the modification, but can't find it. Anyone have it ?

Thanks

Mark K3ZX

# 4738. Program DIPCAGE1.exe

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-28 13:32:59 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <ad00ub$p2n$1@paris.btinternet.com>
Source record: 41466

NOW AVAILABLE "DIPCAGE1.exe"

RESONANT LENGTH, END-EFFECT, BANDWIDTH, INPUT RESISTANCE OF 1/2-WAVE DIPOLE.

This is a little more accurate version of WIRECAGE.exe which it replaces. It may be found easier to understand and use. It computes the resonant length, end-effect, bandwidth versus various SWR points, receiving 3dB bandwidth, center feedpoint input resistance at resonance, etc. Input resistance values are somewhat smaller than usually stated but this is not of great consequence since in practice there are a number of sources of uncertainty affecting this non-critical parameter.

The dipole conductor may be any wire gauge, rod or tube, or a cylindrical cage of any number of wires. The usual facilities are available to vary antenna dimensions and number of wires in small increments while observing computed output values.

This program is more of educational than practical value since it will be seen that at HF the trouble and expense of increasing antenna diameter is not justified by the trivial improvement in bandwidth which might be obtained.

DIPCAGE1 is contained in one 36.5 KiloBytes file. Download from website below in a few seconds. No unzipping inconvenience. Run immediately. Or it can be run without downloading.

Hi,

I have an NC 300 that was a basket case but followed me home anyway.Now
that I have the electronics working with the exception of a bad 160 meter
coil I am ready for the cosmetics.
The cabinet required a total stripping and I am looking for a side and
back view so I can see the two tone paint scheme used.So far all I have
found is front views.
Any help would be appreciated.
THANKS,
...Charlie...KC0EH...

Hello gang,

If your at the huge Rochester NY hamfest this Fri or Sat be sure to stop by and see my boatanchors at the outdoor fleamarket - all priced to sell. Appox Prices

Viking I , overall good and working $140

Viking I , fixer upper and missing 3 tubes , it will transmit $70

SX-101 , overall good (not the model with 160 band) $160

NC-173 with matching speaker, working but needs painting $145

HP-606A working, nice 65Mhz RF signal generator $50

HP-141T 0-110Mhz spec analyzer working, $400

Eico tube tester (model 666 ?) , working, $55

TMC Mil receiver with 4 plug-ins, working, $130

TMC Mil receiver w/o plug-ins, working, $50

Please don't ask me to hold items or send pics (already have 3 other anchors on hold) .

First with CASH - gets the goods.

All,

I am helping the widow shovel stuff out.

There's what I think is a BC-312 that looks like
it's never been touched. No rust, nice panel, etc.

It has the original manual, but is missing the tag
for whatever reason.

Is it worth the shipping that its considerable weight
would entail from Colorado??

Regards, Bill Hale K0QA

Charlie,

The NC-300 Cabinet is painted light machine gray on the top and top sides just like the front panel the bottom and bottom sides are a much darker color that I have never matched. The dividing line between the two colors is the chrome strip that divides the cabinet top and bottom. I have found that Rustoleum light machine gray matches the top and panel perfrectly.

Tony

# 4758. FS Pair of Eimac 4X150As

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-29 00:03:10 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <2VUI8.1180$_U.695@newsread1.prod.itd.earthlink.net>
Source record: 41486

FS a pair of NIB Eimac/Jan 4X150As. These are apparently 4X150As made for the Military since they have Jan on them as well as Eimac. They are both in a long box with "2 JAN-CIM 4X150A" marked on the end of the box. They appear to be unused accept one is shinny and one has some tarnish on it. They should work great with your KWS-1.
They are guaranteed to have full output. Price is $75 for the pair plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

# 4759. Boatanchors For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-29 00:12:44 UTC
From: cacutts@mindspring.com
Message-ID: <ad16ds$96s$1@slb2.atl.mindspring.net>
Source record: 41487

All,

Due to me moving this summer to a location without a basement I must thin down my collection of bostanchors a great deal. All of the following is a "pick up only" at my Atlanta QTH, sorry I don't have the time to deal with shipping right now. I can deliver to the Atlanta hamfest this weekend. Email me with questions or call me at:
404-244-0573 (home)
770-801-4138 (work)

Here is a list of what is for sale right now. I also have thousands of tubes and will be selling them too, there is just too many to list here. If you have a need for some tubes, let me know. I also have a couple of rack cabinets for sale along with bunch of heavy duty rack shelves.

As for the homebrew transmitter project, it will come with me to my new QTH and will be completed (I got to have something to do).

Thanks,

Allen Cutts
N4OZI
cacutts@mindspring.com

The list as of May 28, 2002:

---
Hallicrafters SX-73
This receiver will need some work. Has problem with a broken contact that interfaces with the rotary turret. One of the contacts has broken off. I'm told from some collectors that you can exchange that contact with additional contacts that were installed for grounding unused circuits in the turret. Or can be a parts source. Comes with a copy of the manual. Asking price of $300.

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/sx73.jpg

---
RCA RBC-4
This receiver receives on only one band. Comes with power supply and power supply cable. It also includes a copy of the manual and a copy of the maintenance manual. Asking price of $200

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/rbc.jpg

---
RCA RBB
I have two of these receivers, one is black and the other is a olive color similar to the RBC above. Both do not work. Both come with power supplies and cables however one cable is a homemade cable. They include a copy of the manual and a copy of the maintenance manual. Asking price of $150 each.

No image yet on the web.

---
Hammarlund SP-600
This receiver receives, however it will need to be re-caped in order to improve it's performance. A copy of the manual is included.
Asking price of $300

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/sp600a.jpg

---
National HRO-Sixty
This receiver works but after about 30 minutes the audio becomes distorted indicating a problem in the audio section. Only comes with the 75/80 meter coil and a few coils for VLF. 300 volt supply has been re-caped. Copy of manual included.
Asking price of $250

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/hro60.jpg

---
National HRO-Sixty
This receiver is not a rack mount type but rather a standard cabinet type. Looks better than the one above but does not receive. Has all coils including 15 meters and comes with matching speaker. Speaker is missing the National logo.
Asking price of $250

No image yet on the web.

---
Gonset GSB-100
This SSB transmitter does not work and will draw a large amount of plate current on power up indicating a possible problem with the grid supply. Orginal manual included along with a spare 6DQ5 final tube.
Asking price of $100

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/gsb100.jpg

-------
Hallicrafters HT-37
This SSB transmitter works fine. Copy of manual included.
Asking price of $150

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/ht37.jpg

-------
Collins 51J-4
Works great, I hate to see it go. The cabinet for this
particular 51J-4 is not correct, but is one from a 32V or 75A
series equipment. Please give it a good home.
Asking price of $600

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/51j4.jpg

-------
Johnson Valiant
Works, however it does have a problem when using the VFO
where you get unwanted emmisions up and down the band
sometimes. I always used the 3885 crystal and had no
problems. This transmitter does well on 80 and 40 meters
however it's not happy with 10 meters for some reason.
Manual included.
Asking price of $250

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/valiant.jpg

-------
Johnson Viking II
Works great and has been rebuilt in a number of places
including the audio section. Has a new screen supply
resistor and new caps in the power supply. The 6146
finals are only a couple years old. 3880 and 3885 crystals
are included. VFO included also but does not work. Copy
of manual included.
Asking price of $350

Image can be seen at:

http://www.min
dspring.com/~cacutts/radio/ba/vikingii.jpg

-------
Hallicrafters HT-20
Works great and has been rebuilt in a number of places
including the audio section and power supplies. Like most
HT-20s the paint has peeled in some spots in the front.
Has a new 4D32 final installed a couple of years ago. Copy

of manual included and is rack mount with no cabinet.
Asking price of $600

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/ht20.jpg

-------

Addition items will be listed later.

# 4760. Re: Gotham Vertical in original box $16.95 80-6mtrs

Source record: 41488

Wasn't the famed "Gotham Vertical" actually three 14 ft. pieces of cheap metal tubing and an air-dux coil tossed into a carboard box?

Also what was the name of that "80-10 automatically tuned" dipole antenna QST once advertised in the 70's? After many complaints, the ARRL lab x-rayed the center section of it and found cut-up chunks of surplus PC boards inside.....

# 4761. WWI Surplus Equipment Thread sealant?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-29 01:01:23 UTC
From: Terry Nixon <TLNixon@mchsi.com>
Message-ID: <DLVI8.56000$cQ3.1997@sccrnsc01>
Source record: 41489

I have a bunch of tuning capatitators, switches etc, and they are all out of WWII era surplus equipment.

First, the setscrews have heads on them in the patern of a small + (Plus sign).

Does anyone know what the heck the name for this head is, or maybe where one could obtain bits to extract them?

Also some of the stuff has a green colored liquid and some has a red liquid which was applied to the screws to lock them in place. I was told that this may be a thread sealer/anti-tamper sealer known as "Gyptol?" Does anyone know for sure what this might be? It looks similar in appearance to nail polish.

I have tried a number of different solvents, as well as heat, and so far have not been able to get this stuff apart down to the indvidual components so that I can use the stuff. It is in subassemblies at this point.

Any help anyone could give would be greatly appreciated.

Terry-WB0VQP

For future reference, if you can find a clean spot on your scabby cabinet and bring it to an auto paint shop *before* stripping it, they can do a computer color match and mix you whatever sort of paint you need to repaint in the original color. Go to an auto paint supplier, the guys who make paints for the local body shops. They can make up quarts, spray cans, whatever you need. Then you can strip, prime, and repaint. Or just clean, naval-jelly, clean, buff, clean, (did I mention clean?), and repaint if your original paint isn't too awful.

Hello,

The following valves are for sale. They are unused unless otherwise specified, and mostly in original boxes. They are all in stock and can be shipped immediately to anywhere in the world.

2 pcs 3069M Large, round CRT in super heavy duty packing material each in a wooden barrel. One in

completely new, obviously never unpacked (only by me for inspection), the other one seems also to be new and unused but it has

been opened by someone. US$ 250.- each

8 pcs F16-10LD CRT by GEC (some boxes says 'Haltron' on the outside. I have not opened to verify). They

are obviously all unused. US$ 150.- each

1 pcs F16-10LD CRT as above, but made by Mullard. US$ 150.-

1 pcs F16-10LD CRT as above, but this one is used. It has a little spot on the screen. US$ 75.-

4 pcs 7BP7 CRT. The boxes says 'Haltron' I have not looked inside. Unused and unopened. US$ 100.- each

5 pcs 5FP7 CRT. The boxes says 'Haltron'. Some are opened and some are sealed. All the valves are

obviously unused US$ 75.- each

6 pcs P535/1E STC pulse modulator valve. Also coded CV 427. It is similar to 715C. All unused. US$ 50.- each

1 pcs P535/1E Same as above, but this one seems to be used. US$ 30.-

6 pcs C1148 EEV pulse modulator valve. Unused and in original boxes US$ 35.- each

12 pcs C1150/1 EEV pulse modulator valve. Unused and in original boxes US$ 38.- each

3 pcs C1166 EEV pulse modulator valve. Unused and in original boxes. US$ 40.- each

1 pcs QF 451 Ferranti. Looks like a radar TR switch and unused. US$ 20.-

1 pcs KS 9-40D Mullard klystron. Unused in sealed box US$ 20.-

4 pcs M509 EEV magnetron. Also coded CV 3982. Unused in
sealed box US$ 50.- each

2 pcs M599 EEV magnetron. Unused in sealed box US$ 50.- each

1 pcs JP 9-75 Mullard magnetron. Unused in sealed box US$ 50.-

7 pcs 24B1 STC trigatron valve. Unused in original box (Strange
looking valve) US$ 30.- each

11 pcs 725A Western Electric magnetron. Unused in sealed boxes.
US$ 30.- each

Best regards,

Arnold Goksoyr

Yes, you can still get red glyptol. Dunno what is in it, but GC Electronics
sells it and they can probably send you an MSDS.

It's called a "Bristol" setscrew and takes a Bristol wrench to work on them.
You can sometimes find them in a well stocked tool store, but I've had more
success ordering them by mail. A trip to Google will show you the suppliers.

Source record: 41401

I have an early Collins S-Line for sale. I thought I had this sold, but after more than 6 weeks, never received the money, so it is up for sale again. It consists of the 75S-1 Receiver,
32S-1 Transmitter, 516F-2 Power Supply with Speaker installed. The Receiver SN is 10K and the Transmitter SN is 22K. This S-Line is the cleanest S-1 series that I have seen. It looks almost new inside and out. Obviously seldom used. It comes with all of the original cables, but no manuals. This is a one owner system from an estate and the manuals could not be located. I am asking $1150 plus shipping from 79602. Digital pictures upon request. Thanks, Charlie Hugg, K5MBX

# 4774. FS: PC 900 high gm triode - cheap

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-29 18:39:43 UTC

Cross-posted to:
rec.radio.amateur.homebrew,rec.audio.tubes,rec.audio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hello,

PC 900 is a B7G base triode with a heater of 3.9V 0.3A, Va is 135V
Vg -1V Ia=11mA Wa 2.2W Ik=20mA max, u=76 and the gm is 14.5mA/V
A very promising valve to experiment with in low-level stages, both
audio and HF/VHF amplification. It was developed for use in VHF and
UHF television tuners. The low heater voltage makes it very easy to
use in an ordinary 6.3V heater system, just use a dropper resistor of
8.2 ohm 2W and you are very close to 3.9V

I have 400 pcs in stock and I will sell them at only $ 5.00 each or
$ 2.50 each if you buy 100 pcs or more. The valves are NOS, in mint
condition, original boxes and the label is Haltron. but they are
rebranded, and I think they are originally made by Philips or Siemens.
E-mail me if interested.

Best regards,

Arnold Goksyr

This should read:
FS: I have a very nice clean Heath DX-100 that I have horded for at least 10 years and I have decided to sell it off. Most of the copper on the chassis is still bright. It was in fully working condition when I took it off the air and it includes the Heathkit "spotting button" mod. The front panel is about a 9.8 and is all original. The cabinet is a 9+ in appearance. The original manual is with it too. $375. I can deliver to Ham-Com in Dallas in a couple of weeks. If I don't sell it here I'll put it on ebay in the next few days.

I have the following tube-ish transformers available -
QTY 1 unless otherwise noted.

Power, filament AND output transformers are included...

115V primary to 5 V at 20 A Avco Crosley (no CT) for $32.00

115V primary to 6 V at 4 A (no CT) $11.00

115V primary to 6 V at 8 A (no CT) (QTY 4) at $18.00 each

115V primary to 6.3V CT at 3 A Triad for $11.00

115V primary to 6.3V CT at 6 A Triad for $15.00

115V primary to Two sec.6.4 V at 25A, 6.4 V at 25A $52.00

115 / 230 V primary to 7.5 V CT at 51 A at $95.00

115V primary to 10 V CT at 5 A - QTY 2 at $25.00 each

115V primary to 18 V CT at 2 A for $6.00

115V primary to 350V CT at 70 mA plus 6.3V CT at 3A and 5V at 3A
Merit brand for $18.00

115V primary to 1050V CT at 75mA plus 5V at 20 A
Avco Crosley brand for $32.00

115V primary to 1000V CT at 150 mA plus taps at 800V CT at 150 mA and
three secondaries of 6.3V CT at 4 A each. New Triad brand HSM-212 for
$28.00

115V primary to 1100 V CT at 180 mA for $30.00

Merit A-2930 Output Transformer, new in box. 5 Watts
Primary 5000 ohms, secondary 3.5 Ohms for $15.00

Shipping is additional on all of the above

E-mail me for details or to arrange purchase.

I have a nice clean, Gonset Communicator III plus the Gonset amplifier. Both are for 6 meters (I also have a 2 meter, few others). I have never turned any of these units on. I acquired them from the town Civil Defense Department. I'm looking to unload all this and live in Massachusetts. Due to the weight involved I'd prefer to sell this stuff locally. No idea on price - I'm not looking to make a killing here, just get the room back in a closet.

Anyone interested, e-mail me at ron.lucier@flir.com

I travel a lot so it may take a few days to get back to you.

# 4786. 814-Based Amplifiers?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-31 01:02:31 UTC
From: Bob Lombardi <blombardi@cfl42.rr.com>
Message-ID: <3CF6CC4C.4000909@cfl42.rr.com>
Source record: 41414

I've done some looking on line and can only find one example of a circuit built with the 814 tube. This tube is bigger than the 813, and a pair should do a few hundred watts output. The one example I found, in the "Jones Radio Handbook" uses pair in a 1 KW CW transmitter.

Does anyone recall any uses for the 814? I'd be interested in finding schematics, etc.

Of course, it's because I have a couple that a friend left after going SK.

BC-312 is still a decent BA/military rx. One that is in such good shape would be worth saving. There must be somebody in CO that would pick it up for a fair price.

And there's always eBay.

>FWIW mine is silkscreened over fine black wrinkle.

In case anyone thinks this is justsemantics -- mine is definitely St. James Gray, quite a bit lighter than the black plastic dial escutcheons and knobs.

Maybe "matte" doesn't quite describe my panel's finish. It isn't wrinkle either, but sort of a fine frost pattern. I would not swear that it's the original paint and lettering, especially since someone (the factory?) very neatly cut the rack mount extension of each side of the panel.

But maybe Collins made these sets in more than one color scheme.

FIVE DOLLARS handling PLUS shipping? For
a 6 ounce meter?

Maybe you should also consider charging a
'viewing' fee and maybe if you think about it
you can start charging a Newsgroup fee to
read about your handling and other fees.

The 814 is, as I remember a little taller than the 813? but not as
fat. It will handle about half the
power that an 813 will. I ran 4 of them in GG many years ago. They
worked very well. I think
that I ran around 1500 volts on them. 4 of them will run 1 kw input
with ease. Similar in power
capability to an 811A.

If you can find an old Comdel CP11, they were an excellent processor.
Plugs in between mike
and audio in on the rig. They convert the audio to SSB, clip it,
filter it and convert it back to
audio again. So it gives the benefit of rf clipping but is in your
audio chain.

Ahem, IMHO, the best one is the one I designed.

See: http://users.triconet.org/wesandlinda/s_proc.pdf

for my paper which was published in Ham Radio Magazine Sept 1979.

There is a remote possibility that I can scrounge up a board for the clipper/filter for this project. The Plessey chip is long obsolete so if you would like compression ahead of the clipper, you would need an alternate circuit.

Once upon a time this was offered as a kit by a company that stole the design from me, but they went belly up a long time ago.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355821375

This is one of those big old crystals from way back when. It looks like a FT-243 on steroids - long pins and wide spacing. This would be a great one for a homebrew CW rig as the 3544 kHz. puts in right in the middle of the "general" segment of the 80 meter band.

Thanks again for looking.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355966567

There can't be many of these around, although I think I can lay my hands on one more N.I.B. This transistorized Jackson Electrical Instruments Company Model 562 Code Oscillator and Monitor apparently dates back to the early '60's (before zip codes). It is a high-end unit, as code oscillators go, and is designed to be hooked up to your transmitter to monitor your keying, or for code practice. If you have two of them, there are connections to hook them together for sending and receiving, like the old Boy Scout set-up my brother and I learned CW on back in '64. There's even a blank on the front panel for, according to the instructions, "painting your call-sign" on it. Instructions, tag, and warranty card are included. I wouldn't count on getting very good warranty service on it, though HI!

Thanks again for looking.

73,
Tom

I have one of these, (Comdel) if you're interested drop me a email at
dj2001@mn.rr.com

Ham Radio was the best ham radio magazine bar none. It was rich with
good technical articles. I have all issues from the first to the last,
but I am keeping them, I still pull a couple of issues once in a while
to just read the articles which are more interesting than what we get
now. I remember the very good split band processor article. I can't
remember the name of the company that built those but I think they were
marketed by Alpha for a while. I'd have to look in one of the HR issues.

# 4809. Help! Knob shaft won't turn string of bandspresd dial.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-05-31 13:10:05 UTC
From: msenecal@logicon.com
Message-ID: <50ecc828.0205310510.2bfed0e4@posting.google.com>
Source record: 41437
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

While using my SX-99 last night the Bandspread knob quit working. That is, I turn the knob, but the tuning dial and the tuning capacitor do not move. Investigation indicates that (of course) the string wound around the shaft of the knob does not move as the knob is turned. Is there something I can do to re-establish solid contact between the thread and the knob shaft, short of re-stringing?

Thanks!

# 4810. FS: RS 242 WW2 German power triode

Hello,

I have several of these antique globe shape German triodes in stock.
It is directly heated, and has an European 4-pin base and about 12W
anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max.
anode voltage is 400V.The valves are NOS, and very nice to look at.
You will find a picture at my web site. www.demostenes.no
Just search for RS 242 in the left hand corner.
Please contact me by e-mail if you are interested.

Regards,

Arnold Goks�yr
DEMOSTENES - N6899 Balestrand, Norway

I saw one of the on ebay a while back. Almost bid on it just to "check out the competition." <g>

|
|Ham Radio was the best ham radio magazine bar none. It was rich with
|good technical articles. I have all issues from the first to the last,
|but I am keeping them, I still pull a couple of issues once in a while
|to just read the articles which are more interesting than what we get
|now. I remember the very good split band processor article. I can't
|remember the name of the company that built those but I think they were
|marketed by Alpha for a while. I'd have to look in one of the HR issues.

Maximillion Associates built a commercial split band processor.

After my article was published, I was swamped with requests for a source of circuit boards. I wasn't in the board business but I got so many requests I went to a local company and ordered a minimum run of 100 sets.

I had no soon committed to this than a letter arrives from a company called Circuit Board Specialists. The letter included a set of boards and informed me that they had had so many requests that *they* were going to offer boards for sale. Since the boards had both *my* call sign and the hr logo on them I called Jim Fisk, the founder and editor of hr magazine.

I asked him whether he had a problem with copyright and he replied that he had no objection; and "Oh, by the way, there is a kit coming out for your design." What he failed to mention was that the kit was the first offering from a new company named Radio Kit, that he just happened to own. The kits apparently were in work before the article was published.

I wound up paying for a small classified ad in hr and sold out the first run of boards as well as a follow up order. They literally when around the world. I actually had a request from a VK4 nine years after publication.

BTW, my (and everybody else's) Kenwood TS-870 uses a split band speech processor.

Source record: 41442

FS a pair of NIB Eimac/Jan 4X150As. These are apparently 4X150As made for the Military since they have Jan on them as well as Eimac. They are both in a long box with "2 JAN-CIM 4X150A" marked on the end of the box. They appear to be unused accept one is shinny and one has some tarnish on it. They should work great with your KWS-1.
They are guaranteed to have full output. Price is $75, shipped. Thanks,
Charlie Hugg, K5MBX

Go to your local electronics shop. Get a 10W 70V PA system transformer.
Voila, 600 ohms in for five bucks or so.

If you are too cheap to do this, look for abandoned distributed sound
systems, which are a good source of 8" full-range drivers and 70V transformers.

Matt,

No need to fall on the sword yet...

Follow the string to where it is tied to the tension spring on the
largest pulley wheel assembly. Remove the spring, untie the knot, pull a
little tension on the string and re-tie the knot.
Good luck.

ZUT,

Vern Weiss, W9STB

From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3CF7C489.1FFFC615@erols.com>
Source record: 41349

The 814 was used in the SCR-506 (BC-653 transmitter). It provided about 25 watts out on 75 meters. The 814 has 65 watts of plate dissipation. At 50% efficiency one could run about 500 watts, or maybe a kw PEP on SSB, pushing things to the limit.

But why not use a nicer vintage tube like the 813, with its 125 watts of plate dissipation? There are still thousands of them around.

Bob Lombardi wrote:

Or use rosin. Dissolve a little bit in alcohol and apply it on the
shaft. Its a little sticky at first but will gradually smooth out.
I've heard of people using the sticky old wax from old capacitors for
the same thing. Dunno about that one.

This works if you can get a good filament transformer that is very linear
rather than with a nasty curve to it. This often means spending money for
a transformer that costs more than a cheap 70V PA system transformer, but
it can work.

Filament transformers also tend to have fairly poor high frequency response
but some of them are surprisingly good. The little Western Electric potted
wall warts for powering Princess phones sounded great.

Mostly because I have a pair of 814s.

I have the TDSLPE, and it says the 814 is 160 W Pout, more than the 813.
That makes it sound like a KW SSB is possible.

Thanks for the lead on the BC-653/SCR-506. If I can find one, I'd like
to try these tubes before I tried to get all the parts to build up an
814 amp. If these tubes are bad, I'm afraid all that effort and $$$
would be lost.

|Many thanks for all the comments. I am curious. What about the W2IHY
|Technologies 8-Band Audio Equalizer and Noise Gate that is advertised in
|QST. Will it achieve similar results as a good speech processor?

The short answer is NO.

But you can have endless fun on the air talking to others that are using them, particularly the guys that have bypassed the audio stages in the rig and are driving the balanced modulator directly.

"Okay, I've boosted 50 Hz by 1 dB and cut 400 Hz by 2 dB. How do I sound now."

"Just a minute, I recorded you... let me play it back."

"Hmmm. Well, I dunno... let me boost 50 Hz by another dB. How does that sound?"

"Oh, much better. Now try boosting 4 KHz just a bit...."

And the cell phone company thought they were original with, "Can you hear me now?"

You can also enjoy annoying the others trying to operate in close proximity, especially with the opposite sideband burble you're now transmitting as you attempt to extend your frequency response to 0 Hz.

I don't know what you are reading your info from but the 814 will run
1/2 the power that an
813 will. It will take 4 of them to run 1 kw pep input. It takes two
813's to run 1 kw pep input.
There is no way you will run that kind of power on a pair of 814's
with out burning them up.
They have a 65 watt plate dissipation, the same as an 811A. They will
run the same power as
an 811A.

The pair of 814's will run about 500 watts pep input. You should get about 300 watts pep
output in grounded grid.

Most of the older handbooks have them listed in the tube tables in the back.
Just ground all the grids and drive the filament with a filament choke just like you would 813's.
You shouldn't need any bias.

Try them. They are a nice tube.

Hi Martin

A ballast tube is an old time attempt at a constant current generator. A superior replacement can be made from a 3 terminal regulator like a LM317 and a resistor to set the current you desire. If you are regulating AC put the LM317 inside a diode bridge so it only sees DC. The reference voltage on a 317 is 1.25 volts divide 1.25 by the current you need in amps and you have the resistor value required. connect it between the putput pin and the ground pin of the LM317. The constant current will flow from the ground pin to the input pin (+ to onput and - to ground pin) The voltage applied should not be more than the 317 rated input voltage. Use a LM317HV if you need more.

Bob,
I just thought you would be interested that I run a pair of 814's with 800 volts on the plate as modulators in my Heathkit DX-100. They modulate (three) 6146's - another mod. Someone did this mod to it a while back and it works great. It's like having a pair of 811A's + in the modulator. I've never heard of anyone who used them in audio service before but they do work. They're not as hearty as 813's but always make for interesting conversation when you tell people on the air that you use them.
I hope you have good luck using them in whatever circut you choose - even in a modulator!

From: jwodell@provide.net
Message-ID: <3cf9e514.3021331@news.provide.net>
Source record: 41369

I recently picked up an NC-183 (the receiver of my youth).

It works rather well. The two lower bands are, amazingly, almost precisely calibrated. WJR, 760 comes in at exactly .76 Mhz, and it's that way up to 1600kc.

Same for the next band up.

But someone has been at the two upper bands. It isn't bad, but the oscillator coil doesn't allow sufficient adjustment to set the lower frequencies properly. Thus, it should be at 7.455 for 40 meters, and it's at 7.255, roughly.

I don't want to rewind the coil. How about a brass slug in there? It works, but will take some engineering.

Understood - mine is about the same black as the knobs (but flat of
course).

> Maybe "matte" doesn't quite describe my panel's finish. It isn't wrinkle
> either, but sort of a fine frost pattern.

Possibly the same as mine. I use the term "wrinkle" because it is
basically the same paint, with the appplication & drying techniques
determining the degree of "wrinkle", from a fine frost to the heavy
wrinkle we know on some sets. I think that my finish has become
somewhat smoothed over its years, too.

>I would not swear that it's the
> original paint and lettering, especially since someone (the factory?) very
> neatly cut the rack mount extension of each side of the panel.

One may never know. But I think several of us have seen a number of
"nonexistent", "never made", but undisputably original variations in
some BA finishes, yes?

> believe they've reopened the business.

Yeah - but it's a bitch to do the mod right. You have to
change the 77's input to a Mic connector, then fashion a cable
for the output to connect to the rig. And you have to
mod the keying circuit to operate from the mic switch.
I must've done mine wrong. When I finished the mod, I
connected the new output cable from the Alpha to the mic
input on the 746. I fired up the Alpha and waited
a while - someone told me you're supposed to wait a few
minutes - then I keyed the mic. It blew the 746 right
off the operating desk - pieces of melted plastic
are still embedded in the sheet rock, according to
my wife. The carpenters have finished replacing the
section of wall that was destroyed, but they claim
they can patch the damaged sheetrock on the rest of
it. I'll be going back to the shack to figure out
what went wrong, as soon as I get these casts off and
the doctor gives me permission to walk up the stairs.
I'm sure the smoke odor will be gone by then.
We never did figure out whether the force of the
explosion blew me out of the chair and down the steps,
or whether I stumbled in the smoke and fell. The last
thing I remember is thinking how powerful my audio
was going to be.

What is the possibility that someone jacked with it and got the oscillator on the wrong side of the incoming signal. If the IF (first) is at 455 khz then it might be possible to get it wrong. The error in calibration seems too much for component drift to me.

Another idea....
could the dial be indexed improperly -or- could 're-indexing' fix it?
You'd have to go back to the other bands and touch them up and maybe
they'll have enough range.
Just finished a set with the same problem today...wasn't any other
alternative than fudging the dial pointer in order to get all 6 bands to
align properly.

Message-ID: <3CFA810B.D03EDF5F@mindspring.com>
Source record: 41382

Hi,

My wife (KB7UJC) and I (KB7UKR) just completed a major purchase and catalog effort of radio and test equipment manuals. If you are looking for a manual for a piece of equipment, you might want to come to our web site and look for it. We have them sorted by manufacturer (Motoroal, GE, Johnson, etc.). You can click on a manufacturer and search for a model name or manual part number using the search feature of your browser.

We charge actual shipping costs via USPS book rate (unless you want to pay more for some other method). Prices for manuals range from $1 to $30, depending on size (physical weight), condition, quantity we have on hand, and so forth. If find a manual you want, just drop us an e-mail and ask us the price (EXAMPLE: How much would GE 14 be, including postage?). We'll get back to you in a day. Oh, and prices go down when you order multiple items (we want our garage space back).

These are not copies, and when the original manual is sold, that's it, we're out.

So come take a look at

http://rhess3.home.mindspring.com

We're doing this as a service to the ham and test equipment communities, and not as an ongoing business. We take personal checks, Money Orders, and PayPal.

My best to you,

-Kevin C. Hess (KB7UKR)

> Plus the audio is a little too "bright

These radios were designed to run into the high impedance phones of the
time. Running into stereo headphones is going to give you too much bass
and too much treble. You probably hear quite a bit of hum and hiss even at
low volume settings.

Best solution is to use the proper phones.

Second best, use the new headphones, but
I would hook a 200 ohm resistor in series with the headphones to lower the
volume.

Regards,

George

## 4869. Collins 32RA Plate Tank Coil (or data) requested:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-03 20:23:30 UTC
From: yardleyite@aol.com
Message-ID: <20020603162330.28088.00002805@mb-fo.aol.com>
Source record: 41297

Would anyone have a plate tank coil (or their inductance rating so I could make my own) for a Collins 32RA part# 190E-1 or 190F-1?
These coils resemble small roller inductors and are used in the above series transmitters.

Secondary, if none are available, would anyone know the inductance rating for these coils? Any assiatance would be greatly appreciated. Please reply to my email address only.

Source record: 41299

I have for sale a Ten Tec Argosy II Model 525D in very good condition with original manual and Ten Tec hand microphone. I would rate it a 8 out of 10 and there is some light scratches on the case and power supply nothing major for its age. The power supply is the matching Ten Tec 225 with original manual. This rig has a digital readout and covers 10 to 80 meters and high output power is between 40 to 50 watts and low is between 4 to 5 watts. Here are some of the options that it has, hard to find 223A noise blanker,219 cw filter 250Hz and the audio cw filter 224. This rig is in fine working condition and a high serial number 25xx.....Will take $375 plus shipping in the 48 states only. I can be reached at 508-821-2993 or email.....WZ1U Steve

# 4871. HT46 knobs

I plan to bring the following Collins Equipment to Arlington HamCom next week end. I will be located at E9-10.

1) 75S3B late serial number (85XXX), with t-9, round emblem. Nice condition with someone's SS# engraved on the back. Also has extra RCA plug installed on rear, but nicely done. No extra filters.

2) 75S2 wide brow, nice condition, recently aliened by Bud Whitney.

3) 75A4 good condition, with 4to1 driven, extra NOS 1500 filter, sold separately or with unit.

4) 516F2 power supply, no cabinet, recently solid stated by Bud Whitney. Very nice condition.

I may bring a KWM 380 and a nice KWM-2 also. The 380 was purchased from Wayne Spring a couple of years ago, but not used. The KWM-2a was recently repaired and aliened by Bud Whitney.

If you have an interest, you can contact me there or call 281-291-9226

If the plate voltage, plate current, RF power output of a PA is known then the tank inductance and capacitance can be calculated with sufficient accuracy.

Try programs TETRODE1 and TRIODE1 from website below.

Hello,

These valves are completely new, never used. They are in original boxes and in mint shape. The valves are mostly HALTRON brand, but they were a typical 'rebranding' company and got their valves from well known manufacturers like Philips, Mullard, Siemens etc.

The following are for sale. The price shown are for each valve, and as you can see, they are very low.

950 pcs DY 87 $ 0,40 HV single rectifier

60 pcs EB 91 $ 0,50 = 6AL5
40 pcs EF 50 $ 0,40 WW2 wideband pentode
20 pcs EF 55 $ 0,50 WW2 wideband radar pentode
200 pcs EF 183 $ 0,50 = 6EH7 remote cutoff pebtode
40 pcs EY 81 $ 0,40 Booster diode 550V 150mA
40 pcs EY 86 $ 0,40 HV single rectifier

220 pcs PABC 80 $ 0,50 triple diode + medium u triode
400 pcs PC 900 $ 3,00 high gm VHF triode + audio
90 pcs PCC 85 $ 0.40 double triode VHF
280 pcs PCF 200 $ 0,50 triode + high gm pentode
350 pcs PCF 201 $ 0,50 Triode + high gm pentode
630 pcs PCF 801 $ 0,50 Triode + high gm pentode
370 pcs PCF 802 $ 0,60 Triodepentode
730 pcs PCH 200 $ 0,50 Triodeheptode

150 pcs PCL 81 $ 0,60 Triode outputpentode
190 pcs PCL 82 $ 0,50 Triode outputpentode Wa 7W
200 pcs PCL 86 $ 0,60 Triode outputpentode Wa 9W
250 pcs PFL 200 $ 0,50 Pentode + high gm outputpentode
(S= 22mA/V Wa 5W)

100 pcs PL 36 $ 0,50 Line outputpentode Wa 12W
170 pcs PL 82 $ 0,50 Output pentode Wa 9W
170 pcs PL 83 $ 0,50 Output pentode Wa 9W
360 pcs PL 84 $ 0,50 Output pentode close to EL 84 l
200 pcs PY 81 $ 0,40 Booster diode 550V 150mA
100 pcs PY 83 $ 0,40 Booster diode 175mA

Even more discount is available if you buy large quantities.

Source record: 41312

Racal RA-17C-12 Communications Receiver for sale. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors, etc. It is all original. It is in very nice shape with top cover, copy of manual, and Racal Brochures. Stability is super with the Wadley Loop. See on page 329 of Osterman. It is listed as "scarce". This is one of the best receivers I have ever used. This one is in very nice shape and works exceptionally well. I need some room, so it is up for sale.
Price is $550 picked up in Abilene, Texas, or I can deliver it, upon request,
to HamCom in Arlington,Texas this weekend. Digital Pictures are available upon
request. This is a very nice receiver and priced below Osterman's suggested price.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

Hello to all,
I sure could use the service info for an old Heathkit IM5228 VTVM. I got one, but it reads 0 ohms on every setting, and no matter what value resistance I try to check. The voltage scales seem to compare with my RCA meter extremely close. So, it's only in the resistance readings I need to correct..
Thanks to all

Source record: 41319

Original Johnson Viking Ranger User Manual. The nice thing about the originals over a copy is the quality of the pics is so much better. Someone has cut off the front and back covers, slightly damaging part of the plastic comb binding, but the pages are all excellent. $25.00 shipped in the US.

dave@ragsdale.net

# 4892. FS: Orig Ranger Manual

Newsgroup: rec.radio.amateur.boatanchors

Hello I got MUCH, MUCH, MUCH more stuff 4 Sale.....

Yaesu Landliner LL-301 phone patch......$29.00

AEA PK-88 TNC with manual .....$40.00

Swan 350 with Electro-voice 727 desk microphone, and matching Swan
117-C power supply and power supply with manual
works Great.....$139.00

Gonset GSB-201 desk amplifier runs 4 - 811's with manual wired
untested (pick up only Los Angeles) for 110 volts, output is 500 watts on
110 volts.
.....$240.00

Eico 625 Tube Tester with tube chart.....$75.00

Heath-Kit "THE TWOER" in EXCELLENT a COLLECTOR item for sure with the
AC/DC cable, and original heath-kit microphone $99.00

Heath-Kit HW-22 SSB Transceiver with original Heath-Kit microphone,
mounting bracket and matching Heath-Kit power supply.....$125.00

Heath-Kit AM-2 wattmeter.....$20.00

Micro-Match (vintage) # 262 RF Power/VSWR meter...$75.00

Autek Research Message Memory CMOS Keyer MK-1.....$75.00

Palomar R-X Noise Bridge.....$35.00

Palomar Tuner/Tuner PT-340.....$55.00

B & W # 595 6 position antenna switch......$30.00

Courier Port-A-Lab 500 wattmeter/VSWR/Modulation/Relative Field Strength
Meter.....$39.00

Maxon (TWO) CS-0510 4 channel handhelds with swivel cases (can't test do not
have a charger)
Both for .....$55.00

Yosan HJ-502 "NEW IN THE BOX, NEVER USED" WITH INSTRUCTIONS, AND ORGINAL
BOX
Power/VSWR/Modulation/ AND a frequency counter.....$85.00

Astron RS-20A needs new Positive +, Negative - posts put on ...$45.00

Kenwood SMC-25 speaker/microphone for the TR-2500, TR-2600...$20.00

Kenwood YK-88CN 270HZ C.W. filter on 8830.7 KHZ.
This filter will fits these models:
Kenwood TS-130S,130SE,430S,440S,530S,530SP,830S,670S,660,and
the R-5000. .....$60.00 shipped in the U.S.

Kenwood TU-4C (new in the box) is the Tone Encoder for the Kenwood
TW-4000A 144/440 MHZ dual band mobile radio .....$45.00
shipped in the U.S.

KENWOOD CK-18 WARC BAND COIL PARTS KIT FOR THE TS-180S (New In
The Box),(UNUSED) This will add 12, 17, 30 meters to your Kenwood
TS-180S, instruction manual included.....$65.00 shipped in the
U.S. ONLY

Kenwood IC-10 (set of two chips) these are required for computer
control when using a Kenwood TS-440S, and R-5000
.....$49.00 shipped in the U.S.

Power supply looks and works fine. The cabinet is sanded and ready for paint.

$35 plus shipping for both.

# 4905. Need Help with Drake C line!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-05 17:55:19 UTC
From: Rob <Pse@NoEmail.Com>
Message-ID: <FgsL8.2511$H67.13640@tor-nn1.netcom.ca>
Source record: 41333
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hi,

After 10 years of sitting in a box, I just set-up my old Drake C line (R4C and T4XC). The R4C is working great. But the T4XC is giving me problems. Since it is getting impossible to find anyone in Canada to fix these old radio, perhaps someone can give me some advice.

Problem 1

When I operate the in "Separate mode", everything seems to work pretty well. But when I go to "transceive" mode (either the R4C or T4XC VFO is used for both transmitting and receiving), problems start. At first it works! But after a while, I hear a tone in the receiver. What is really weird is that when I can tap on the cabinet of the T4XC transmitter, the S meter on the R4C moves and I can hear it in the receiver while in RECEIVE mode. It seems like my old T4XC has a hidden microphone (smile). It must be some sort of weird feedback or ground loop.

If I disconnect the INJ (injection) cable the tone/ feedback disappears. Also when I go back to the separate mode, the tone / feedback disappears. Right now the only way I can operate is in "Separate" mode. I have been getting pretty good audio reports on the air.

Does anyone else experienced this? WHat might be wrong? Perhaps a blocking capacitor has gone in the Injection circuit? I doubt it is serious. But I need some help tracking the faulty part down. Any suggestions would be appreciated.

Problem 2

When I tune up on 20 meters, I initially get over 175 watts output power! But it soon drops to 100 watts. The power sometimes fluctuate rapidly at times during tune up between 100 and 175 watts. (The plate current also fluctuates between 300 and 450 mils). It can be a challenge at times to tune it. The problem is intermittent.

Any ideas? It looks like another capacitor has gone? How do I track down the faulty component?

Rob
P.S. I really wish I had a VTVM!!

That could be a bandswitch contact...or ant relay if you ever see it happen on other bands. My old Galaxy xcvr does both but is somewhat tame after a good cleaning with De-Oxit and burnishing the ant relay contacts.

Source record: 41335

I have for sale a Ten Tec Argosy II Model 525D in very good condition with original manual and Ten Tec hand microphone. I would rate it a 8 out of 10 and there is some light scratches on the case and power supply nothing major for its age. The power supply is the matching Ten Tec 225 with original manual. This rig has a digital readout and covers 10 to 80 meters and high output power is between 40 to 50 watts and low is between 4 to 5 watts. Here are some of the options that it has, hard to find 223A noise blanker,219 cw filter 250Hz and the audio cw filter 224. This rig is in fine working condition and a high serial number 25xx.....Will take $375 plus shipping in the 48 states only. I can be reached at 508-821-2993 or email.....WZ1U Steve

# 4908. Need Bandswitch for Dentron Clipperton L, Info

Source record: 41337

I noticed that in the new PS2 "Medal of Honor" WW2 war game that images of the Collins 51J-3 or 4 are used. A decade or so off on the history but it is in there. Of the two images I saw, one was a mirror image with the meter on the left side. Kinda wierd viewing a familiar radio in a video game. The player has to shoot up a radio as part of the mission but it isn't the 51J-

I agree with Bill....It is like one of those things that goes 'bump' in the night.
I would first suspect a tube has to be reseated. Make sure all connectors are tight, and move each control on the front panel while listening to see if the sound changes. If the cause is a BAD tube, listen to the sound and tap each tube lightltly with the eraser end of a pencil....see if the sound is effected by a particular tube.
You can tap on other components with the pencil while you are at it.

Well, I've forgotten the correct name, but the "mud" capacitors in the pressed cases are the troublemakers. Orange Drop or any other good Mylar caps are suitable replacements. I have had a 88LF for over 45 years and I did the replacements so long ago I've forgotten the details. Haven't been back in since. Wish my computer would run that long between service.

I have opened up the T4XC and R4C and inspected the tubes. They all look pretty good. They are firmly pushed into their seats. But I will try your eraser trick.

The problem only occurs after I have transmitted for awhile. Then I start hearing the tone/hum in my speakers in "Transceive mode". When I tap on the T4XC cabinet, I hear the tapping in my speaker and see the S meter jump on the R4C while RECEIVING. Very strange!

Recently, I have also been getting reports of a 60 hz hum in my SSB and CW transmissions. Maybe the problem is originating in the AC4 power supply.

But keep the suggestions coming. I think it should be fairly easy to isolate the problem

I'm guessing but obviously something is microphonic.
Coupled with the 60Hz hum and bearing in mind the lack of use for the

last 10 years... its most unlikley.. but I have come across
microphonic capacitors and I suspect the smoothing caps prior to the
OA1 or OB2 voltage regulators supplying the HT to the VFO.
As usual, no guarentees etc etc..
I'm usually wrong ;-)

Wanted Knobs for my HT46 Restoration Project

These are the small knobs for Mic Gain, Drive and Final. They're all the
same and are also the same as the small knobs used on the SX146/SR42/SR46.
I have the pair HT46/SX146 and want to restore.

I'll also consider a parts radio HT46 that has the knobs.

Let me know if you can help.

I have the following tube-ish transformers available -
QTY 1 unless otherwise noted.

Power, filament AND output transformers are included...

115V primary to 5 V at 20 A Avco Crosley (no CT) for $32.00

115V primary to 6 V at 4 A (no CT) $11.00

115V primary to 6.3V CT at 3 A Triad for $11.00

115V primary to 6.3V CT at 6 A Triad for $15.00

115V primary to Two sec.6.4 V at 25A, 6.4 V at 25A $52.00

115 / 230 V primary to 7.5 V CT at 51 A at $95.00

115V primary to 1050V CT at 75mA plus 5V at 20 A
Avco Crosley brand for $32.00

115V primary to 1000V CT at 150 mA plus taps at 800V CT at 150 mA and
three
secondaries of 6.3V CT at 4 A each. New Triad brand HSM-212 for $28.00

115V primary to 1100 V CT at 180 mA for $30.00

Shipping is additional on all of the above

Hi all,
I have had the subject radio in use on my bench for several years. Its a large am/fm/sw portable radio and Cassette recorder with great sound. I have seen them occasionally at swap meets and wish I had bought more of them for the boat. SW band is 4-12 mHz which gives me WWV. Has AC, DC, and Battery power.
Questions:
Any one have documentation or schematics?
Know how to use the Osc function? (may be inop on my radio)
Know how to use the Mon function or the pin out for the 5 pin Din jack?

any info would be appreciated.

Cheers,
Scott W7GSM

Got serious about my NC183, and got most things tuned up (well, with a radio that old, sort of).

Wasn't really happy until last night, when the sun went down, and the S-meter started moving like you wouldn't believe. Calibration is very good, and I hear Broadcast stations that you could never find on a Nipponese radio. Stations everywhere. Hope they aren't all images, but

with two working RF stages, don't think so.

Happiness! The secret of such a radio is the ability to sweep large areas of the bands and find signals. It's a pity the people from the rising sun don't get that.

## 4928. Tempo-One info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-06 16:03:40 UTC
From: skydive@usa.net
Message-ID: <9c6d0407.0206060803.7643ad90@posting.google.com>
Source record: 41256

I have a newer Tempo-One that has the plug in balanced modulator board rather than the tube that previously went in that socket. My manual has no info on the board. With the board plugged in, the RF gain on CW only drops quite a bit and the S-meter swings upscale like as if the RF gain control had been turned down about 75%. Receive on SSB and AM is ok. When I remove the board all modes receive OK.

Could anyone possibly scan and E-mail ( or paper mail ) for that matter a schematic of the BM board?

All of the web manual downloads I've found have only the older style circuit using the tube.

Jerry you hit the proverbial "Nail right on the head". I have an SP-600, SP-200, HQ-150. The SP-600 is best simply because of the reason you stated. With the Super Pro I can scan mechanically. You ought to hear that baby spin going from 40 to 75 and back. I like to search the higher freg bands and find the MUF. No computer needed. Well said. NC-183 is one I'd like to have in my collection.

HI,

Thanks for thr post. Where are the OA1 / OB2 voltage regulators. I don't see them on the schematic.

Do you think it is the caps in the power supply AC4 that is the problem?

If so, what is the best way to determine whether a cap has gone bad??

Dale,

Thanks for the link. Sure does bring back memories of my youth. My grandparents and some aunts and uncles like in the NY metro area and whenever I was back there visiting I'd always con someone into taking me own to Courtland St. to see what was new and different.

NYC is not the only town that eliminated their "Radio Row": Pittsburgh, PA did it a few years before NYC (Penn Ave. south of Negley) and Cleveland a few years after NYC (Euclid Ave. between 12th and 15th St.). I think in all three cases what replaced it was inferior, but then I'm a born and bred radio nut.

Regards,
Bill Bowen

Sorry Rob, I'm not familiar with the AC4, but there has to be voltage stabilisers in there somewhere, but perhaps not OA1 OB2 etc. Duff caps are probably easiest to locate by paralleling a known good smoothing cap with the suspect smoothing caps.

HI Mike,

Well the AC4 power supply is very simple. It produces 650 v DC, 250VDC, -45 to -65 vDC for bias and 12 VAC. (The 12VAC is used to power the tube filaments. I don't think it is ever converted to 12 VDC inside the T4XC).

The AC4 power supply converts the 120/240 VAC to the various DC voltages using seven IN4005 diodes. It has a number of resistors as voltage dividers. To smooth the DC it uses a number of capacitors two 125 MFD capacitors for the 650 volt DC line, two 100 MFD caps for the 150 VDC line and two 20 MFD caps for the -45 to -55 VDC bias line. The caps are all electrolytic caps. (There is also two .01 MFD regular caps for the 12 VAC line)

I suspect that during storage one or more of the electrolytic caps has cracked and dried out. (Isn't that a common problem with electrolytic caps?)

If I connect a good electrolytic cap in parallel, how will that help me identify the problem? Won't I still hear the 60 hz tone / hum etc?

Of course, the problem may be inside the T4XC transmitter and not the AC4 power supply. (smile)

What does "OA1" and "OB2" mean? I am not familiar with these terms.

Yes indeed it does. Much of the circuitry is solid state so there is
the normal compliment of rectifier/filtering inside the xmtr.
>

> Of course, the problem may be inside the T4XC transmitter and not the AC4
> power supply. (smile)

I think the tone, etc that you are hearing might be from faulty
interconnecting cables or oxidized relay contacts in the xmtr. This is
probably separate from any hum issues.
>
> What does "OA1" and "OB2" mean? I am not familiar with these terms.

0A2 and 0B2 are common regulator tubes. Not used in the T4XC.

If you don't have a manual and schematic you can download them at
http://bama.sbc.edu

Hi Bill,

Many thanks for the post! But I hate to disagree with you. But the T4XC (unlike the R4C) has more tubes than transistors. And from I can see the 250 VDC and the -55 VDC lines from the AC4 power supply are used to power the few transistors in the T4XC (resistors are used to drop the voltage). The 12VAC line appears to be only used for the filaments. I don't see anything like a rectifier circuit. (But maybe I am blind (smile))

Taking a closer look at the schematics. It appears that the -55VDC line is fed into the INJECTION jack along with a RF signal from the VFO. Since my hum disappears when I disconnect the INJECTION cable between the T4XC and R4C, I suspect that the -55 VDC line is dirty. Maybe the caps in the power supply have gone. (But I am only guessing!)

Perhaps the dirty -55VDC Bias line is also responsible for a hum in my transmitted signal. Will a dirty BIAS line cause hum in the transmitted signal?

Besides just replacing the caps in the power supply, I don't know how else to identify whether a cap has gone. I hope I can find replacement electrolytic caps - 20 MFD for the bias line (and 125 MFD and 100 MFD for the high voltage lines)

Oh yes I forgot to ask. Will a electroylic cap work for awhile then start acting up after more power is drawn from the power supply? The bias voltage is supplied when the T4XC is turned on but maybe the current increases during transmit!

That is what is happening here. The T4XC works great for the first 5 minutes of transmitting then the hum etc appears in my receiver and in my transmitted signal. It does not stop until the T4XC is turned of and later turned on after it has cooled down.

www.mouser.com would be a good start for caps. Not sure if they will
have what you need for the HV though. But since you're getting hum on
receive the HV wouldn't be the culprit.

Well, it can surely start to degrade after it heats up a bit. There's
no current thru a cap, but transmitting will definitely raise the temp
in the PS. Can you measure any voltage difference in the -55 line in
the hum vs no hum condition? Often a bad cap will pull down the
voltage.

Looks like the weather will be great, hope to see you there!

The Hampden County Radio Association is having their annual tail gate party this coming Friday evening, June 7th. Set up in the back parking lot of the Feeding Hills Congregational Church at 6:00 PM until dusk. Sellers $5/spot, buyers FREE.

Location: Feeding Hills Congregational Church
21 North Westfield Street
Feeding Hills, MA 01030

For more information check out: http://www.hcra.org or contact either Dave, KB1MU (kb1mu@charter.net), 413-596-6605 or Jim, KK1W (kk1w@arrl.net), 413-245-3228.

Thanks and hope to see you there,

Jim, KK1W

It will do just fine. Of course its a whole lot easier just to replace the filter cap(s) in the -55 circuit. You can possibly get something usable at Radio Shack.

Hi,

Well I only hear the hum during receive when the Drake C line is in "Transceive" mode where the INJECTION signal from the T4XC is being fed into the R4C. I do not hear the hum in the "Separate" mode where the VFO on the R4C determines the receive frequency and the VFO on the T4XC determines the transmit frequency. The injection signal from the T4XC is not used in that case.

I agree. I doubt the 650 HV is the culprit. It is likely either the 250 VDC or -55 VDC lines. (More likely the -55 VDC line as mentioned in my previous post).

I will see if I can find a pair of 20 MFD electrolytic caps for the -55 line. Do you know what the rule of thumb is to determine the voltage rating. Should I be looking for caps rated at twice the voltage (i.e. 110 volts?)

I can't seem to find anyone selling 20 MFD caps. But It looks like I can easily get 22 MFD electrolytic caps rated for 160 volts from mouser and other places.

Please correect me if I am wrong but I don't think using 22MFD (vs 20 MFD) will be a big deal for use in the AC4 power supply. (I guess I could always use two 10 MFD caps in parallel. But that will be more wiring and I doubt there is much room!)

What do you think. Will 22 MFD electrolytic caps rated for 160 volts work as smoothing caps in the -55 VDC bias line?

I have for sale a very nice condition 75S-3.
Cosmetically and electronically it is in excellent
condition. I don't want to ship this receiver so
it is sold for pickup in the Arlington, TX area.
I can meet a buyer at HamCom this weekend.

Thanks,
Michael

The schematic calls for 20uf and the original parts list says 40uf so I guess its fairly non critical. A 22, 33 or even 47 should do the trick. 22 is the standard value these days in place of 20. Voltage is shown as 150vdc, so the common modern equivalent will be the 160. Note that this is a dual capacitor. Space shouldn't be an issue. A 22/160 cap is about the size of a cigarette butt. If you are going to order from Mouser, get the 140-HTRL-**** version (high temp).

I think I may have narrowed down my problem with my T4XC.

I took off my cover and started to gently knock on the tubes etc with my pen. The minute I hit either V9 (12AX7) or the electrolytic cap beside it (C107?), the S meter would jump to S40 over 9!

I suspect that either V9 (12AX7) or the cap is defective. I hear that tubes can be microphonic but can caps??

Does anyone know where I can get a replacement 12AX7 or a replacement for the 60 MFD 250 vdc electrolytic cap? (I don't think they make the metal electrolytic caps anymore).

Am I on the right track??

Many thanks for the reply. I did not realise that they made high temp caps!! Yes if I order a cap I will get the high temp version but I think it may not be a cap in the power supply after all.

I took off my cover and started to gently knock on the tubes etc with my pen. The minute I hit either V9 (12AX7) or the electrolytic cap beside it (C107?), the S meter would jump to S40 over 9!

I suspect that either V9 (12AX7) or the cap is defective. I hear that tubes can be microphonic but can caps??

I've never seen a can type cap do anything like that. I'd be more
suspect of the tube or something else in the immediate area.

I recently purchased a Hallicrafters S-38C for my brother. I understand from looking at it that the chassis carries a potential. After making some inquiries I have learned that to remove the shock hazard I need to install an isolation transformer.

While I'm still somewhat ignorant of electronics, I'm fairly handy (I recently restored an old SX-99 to working condition). But I feel that working with transformers is a bit out of my league. I would appreciate some help from someone who has done this before. Basically what I'd like to know is what kind of transformer to buy (be specific), and how/where to install it. Any help would be appreciated!

Thanks!

It is best NOT to change the internal ckt in the ac/dc set. Instead use
a external isolation xfmr or use two back to back filiment xfmr's. Then
the S-38 is isolated and you can ground and use in a safe mannor.
Otherwise use a polorized plug. I grew up with ac/dc sets in the 50's
Good luck 73 Sparks W4EAS

Make sure you check the contacts on the power switch. They get a little dirty and begin deteriorating. Keep them clean.
I replaced most of the micas in the RF section. Leaky as heck as someone else indicated.
Its kind of tricky to align with the 3 IF sections. It helps greatly if you have a sweep generator, wobulator, as the Brits call it.
Good luck.

Hi Bill,

I found a spare 12AX7 kicking around. I replaced the suspect 12ax7 with the spare. I get the same behaviour! Maybe my spare is also defective.

The T4XC uses two 12AX7. I am thking of swapping them. I just don't know if it is a good idea.

Or just maybe the tube socket is defective. Maybe I can use some sort of anti-oxidizing stuff (Oxidet?)

The weird hum etc seems to occur only after I transmit for a few minutes. After I stop transmitting for a few minutes, sometimes the hum etc disappears. Very weird. It obviously only occurs when one of the components heats up during transmit.

I am pretty sure there is something wrong with the mic amp / side tone generator circuit. Maybe the electrolytic cap beside the 12ax7is the cause. The cap is connected to the plate of the 12ax7 and to 250 VDC. It might explain why I hear the hum DURING receive (coupled through the Injection cable). But why is it microphonic?

I also notice the plate current going from 300 to 400 mils during tuneup. I think itis the same problem.

Can I still get metal can caps? Or will any 60 MFD electrolytic cap rated for 250 VDC due?

Rob

Some freeze spray might help zero in on this.

Its entirely possible that you have more than one problem. Having a
tube in a low-level/high gain stage like a speech amp that appears
microphonic shouldn't necessarily be considered a problem unless it is
particularly sensitive.
>
> I also notice the plate current going from 300 to 400 mils during tuneup. I
> think itis the same problem.

I'm not sure exactly what you mean. If the idling current is changing
then that might indicate the -55 v line is changing. But erratic output
power/input current could be a zillion different other things.
>
> Can I still get metal can caps? Or will any 60 MFD electrolytic cap rated
> for 250 VDC due?

Use a small 100 mf/250 volt one temporarily to see if the can is really
bad. Can caps are pretty hard to find. Anything you might run across
will probably be older than what you have now!

You've mentioned a number of different symptoms and its hard to see how
they might all be related. I'd urge you to first deal with the basics
by seeing if the 250 or -55 line are different voltages when the radio
is in the 'hum mode'.

Old WW2 BC-459A Transmitter
covers 7.0 - 9.1 Mc. silver case. Rotary coil etc. are in good shape.
One small cover is missing - Bottom cover and case are both present
and in good condition.
Otherwise looks to be complete and in very good shape.
Will sell for $35.00 plus shipping
Picture available...
E-mailme for details or to arrange purchase

You are on the right track. The tube could be the culprit -
or even the socket. The pins may have coroded/losened up
over the years.

For electrolytic caps: in general, the capacitance value
is not critical. You could probably go to 120 mfd with
no problem. You can series 2 equal caps to get double
the voltage rating and half the capacitance rating.

You asked in an earlier post in this thread about
determining if you had a bad electrolytic in the ps
causing the hum. Here's one way to troubleshoot
that: using your VOM on AC, connect one lead to
ground through a .1mfd 450 volt cap. The voltage
rating is not critical - just be sure that it is
higher than the supply voltage by a good margin.
And you could use a .22 mfd or a .01 mfd or anything
in between. The purpose of the cap in this test
is to block DC. What you see on the VOM on the AC
scale is the ripple voltage, and generally it should
be pretty low. If it is within a couple percent of
the DC voltage - say less than 5 volts on a 250 volt
supply - that's probably good. Start with the highest
AC scale and work your way down - that's to protect

your meter.

If I were doing it, I'd install the isolation transformer external to the radio; even though S-38's aren't exactly rare, I wouldn't want to be trying to adding something that would change it from the original. I'd look for a small (100VA? 150VA?) isolation transformer in a case with a cord you can plug into the wall, and a socket into which you can plug the radio. Sorry, I'm not going to get more specific than that...but you might have a look on, say, the MCM Electronics web site for such a beast.

However, the chassis should not be "hot" except through a couple of capacitors, one to each side of the line. The audio output is transformer-isolated, and the antenna input is link-coupled and therefore isolated. It _would_ be a good idea to be sure the caps from the AC line to the chassis are in good condition, and that nobody has done anything to compromise the isolation otherwise. Admittedly, the rules for line isolation are now rather more strict than they were in 1950 or whenever it was built, so an isolation transformer could serve as an added measure of insurance. But you should be able to _ground_ the chassis, also, to provide protection. (Expect the caps would trip a GFCI...)

Cheers,
Tom

What you are describing is an isolation transformer. You plug
the transformer into the wall receptacle - and you plug the radio
into the receptacle on the transformer.
Specs: input 120 VAC, output 120VAC. Current - that depends
on how much current the SX99 needs. The isolation transformer
needs to supply at least as much current as the SX99 is rated
for. Bring money - it won't be a 5 dollar item.
Be sure it is an *isolation* transformer. I saw one advertised
somewhere that was an autotransformer, not an isolation
transformer. You do not want an autotransformer.

There is another way to provide the safety you want, and
it is a lot cheaper. You can install a 3 wire cord and
plug, and use the SX99 only with properly grounded
receptacles. The green ground wire in the 3 wire cable
connects to the chassis. The white wire in the cord
is also electrically connected to the chassis through
existing circuitry. You will need to have someone
who knows how tell you which wire (white and black)
connects where.

Thanks for the tip for checking out electrolytic caps. I will see if a I have a 400 volt Cap for to hook up top my meter.

I think I should be able to track it down since I can easily get the T4XC into "hum" mode.

>Oakland area as I recall.

That might be the East Liberty area, which was badly "renewed" in the late 60s.

As a kid in Pittsburgh int he early 50s, I remember calling and visiting Cameradio. It wasn't a surplus shop, but a real, large store selling new cameras and radios, with the latest Ham gear in the front windows. I remember going there to buy a pair of headphones for a crystal set I was tinkering with.

I also remember gazing into Cameradio's windows with my Mom and Dad dragging me away cause they were in a hurry -- after Mom had given us sore feet while staring for what seemed like hours into the dress shop windows.

I don't care if the streets of Heaven are paved with gold, as long as the store windows have BA Ham gear in them. --Mike K. AA1UK

One little piece of information.

You may encounter some three-conductor
power cords
with the following colored conductors: Brown, Blue, Green/Yellow

This is the new color coding that was adopted a couple of years ago by ISO
or some international standards body like that. Europe has used it for
years and some imported power cords are actually coded like this. The
USA hasn't quite adopted it yet, so it's not likely you'll find it in a
hardware store (yet).

Anyway here's the break down:

Live (Hot): Black or Brown (goes to the narrow pin on a polarized plug)

Netrual: White or Blue (goes to the wide pin on a polarized plug)

Ground (Earth): Green or Green/Yellow

Click on the links, then click on the "super-size" option for an up-close look at these 2 *very* nice pieces of Drake equipment. The auctions end this weekend, so be sure to record your winning bid while there is still time.

First is the Drake MN-2000 antenna tuner. Good for full legal limit. VERY clean. Non-smoker environment. The tuner auction ends Saturday evening:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1357352998 .

Next is the Drake T4XC transmitter, with a serial number in the high 27,000's. Included in the auction is a seldom used Shure 444-D microphone and an original owner-operator manual for the transmitter. The transmitter auction ends Sunday evening.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1357515410 .

I wouldn't do that! Those capacitors can carry quite a bit of current. My first receiver was an S-38D, which I once grounded. When I turned on the power, an arc formed at the power switch, and it continued until I raced downstairs and frantically threw all the house's circuit breakers. (The arc was between me and the plug.) This made a big impression on my parents, who never forgot it. I didn't either. And I'm sure you won't, either, if it happens to you.

Use that isolation transformer!

Roy Lewallen, W7EL

I have a quite respectable BC-348R with the original dynamotor up for trade for other vintage mil equipment. The receiver has not been butchered and works with the dynamotor or an external AC supply. All one has to do it to convert it back and forth is to change-out the actual dynamotor and mount for a blank dynamotor mounting chassis. The only thing done to it was the gain-balance pot has been removed (that's the one on the end of the tuning cap.) I swear they're more trouble than they're worth!!! hi!! Includes a very nice digitally-mastered loose leaf binder book with "R" (etc) and "N" (etc.) series receivers. Looking for a nice BC-342 or a '312 or maybe another R-392.... whatever? Open to "suggestions"...

AC/DC's are no problem. I don't understand why you would bother. Granted, it was a cheap way to do things back then. They are not, however, particularly unsafe with normal precautions. The S-38 was not a serious communications receiver anyway (more geared to SWL'ing). Used for causual listening - I would think it would be fine the way it is. As someone else stated - many of us grew up with AC/DC sets and they hardly ever caused any problems.

The S-38 I had, I forget which model, had the chassis isolated from the
metal cabinet via rubber mountings. So it wasn't an automatic killer
<G>.
If the rig in question also has them, restoring those mounts should be
the first order of business.
-Bill

>> AC/DC's are no problem. I don't understand why you would bother.

When I was a kid in the 50's, we had a 78 rpm record player with a
metal arm on it. We'd use it on the back porch which had a concrete
floor, and we kids were always barefoot.
Sometimes we would grab that arm and get the s___ shocked out of us.
We figured out (we didn't know why) but if you put the plug in the
wall the other way it wouldn't shock us.
Geniuses we were.

Source record: 41229

New replacement bezels for the rarest of the rare Hallicrafters SX-88 receiver are now available. Perhaps twenty percent of the known SX-88s have the warped bezel syndrome. There is no way to repair a bad bezel and this newly manufactured bezel solves the problem. They are machined out a solid piece of aircraft aluminum on a CNC machine. All the threaded holes, retaining tabs, openings, tapered faces, and openings are true to the original. They are finished in a wrinkled black satin powdered finish. NOTE: I am not making the bezels. I'm just acting as a facilitator. Bezel will be securely packed and shipped from California. A certain number of bezels must be sold before the second run of 20 can be authorized. Money orders and Pay Pal will get priority shipping when the bezels are available. Personal checks will clear before shipping. If a sufficient number is not ordered then payments will be returned. For questions or pictures contact me directly at gharmon@idworld.net. Seller will pay CONUS shipping. Out of country buyers will pay the difference.

Thanks and 73,

# 5002. VHF Version of BC221

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-08 13:40:15 UTC
From: "graham.ogle" <graham.ogle@ntlworld.com>
Message-ID: <HPnM8.912$jT2.92719@newsfep1-win.server.ntli.net>
Source record: 41230

I've recently acquired a VHF version of a BC221. It is a TS-174/U and covers the range 20 - 250MHz (or should that be mc/s!). I've tried to find some information about it, but without success. Does anyone know anything about this item please?

It was made by the Allen D Cardwell Manufacturing Corp and can be dated to 1944. What equipment was it used to tune or was it for bench testing only? Any information would be much appreciated.

Thanks

Graham

I wasn't into ham radio until around 1970 or so. I don't recall Cameradio
having the Collins gear in the front windows anylonger. They did have
new stuff in the electronics section, on the top shelf.

Tydings was my favoite though. Get ol' Ed Lipps talking on a Saturday,
and you'd be there for quite a while. Always interesting stories from
him.

Was there a place in the Pittsburgh area called "Fair Radio" ??
I seem to recall the name, but don't remember if they sold ham
gear.

I found Deoxit! But on their website, Dexoit comes in many flavours. (see
below). What is the best for cleaning tube sockets? POTS?

Part No. D5S-6, DeoxIT D5, 5 oz. spray
Part No. D5MS-15, DeoxIT D5, 15 gr. minispray
Part No. DP5S-6, DeoxIT DP5, 150 ml. pump spray
Part No. D100S-2, DeoxIT D100, 2 oz. spray
Part No. K-D100P, DeoxIT Pen
Part No. K-D50W, DeoxIT Wipes, 50 count
Part No. D5L-32, DeoxIT D5, 944 ml. container

How so you use Deoxit? Do you just spray into the holes, wipe off the
excess and reinsert the tube?

I typically use the D5-5 oz spray. (Thats about all I can afford) For
tubes/sockets I just spray the tube pins then insert the tube in the
socket while wet and wiggle it around a bit. Let it sit for a while so
that whatever deoxidizing it does has a chance to take effect.
After about 15 minutes wipe up any excess. You can use this also on the
phono jacks of your interconnecting cables, bandswitch, noisy pots, etc.
DON'T use any sprays on the radio while its powered up!

-Bill

>Pittsburgh, PA did it a few years before NYC (Penn Ave. south of
>Negley) and Cleveland a few years after NYC (Euclid Ave. between 12th
>and 15th St.).

Philadelphia used to have Arch Street, from about 8th St. to 11th St. or so. All gone to "redevelopment" (sigh).

>I think in all three cases what replaced it was
>inferior, but then I'm a born and bred radio nut.

AMEN!

Much of what kept Arch Street alive was WW2 surplus goodies and overruns of domestically manufactured consumer stuff. Eventually the supply of that began to dry up, and the demand for it eased up as well.

btw, if you want to confuse a newcomer to Philly, tell them they must visit a place (restaurant, store, museum, whatever) on "14th St." - which doesn't exist.

Have you considered a computer uninterruptible power supply? There are usually a lot of them on ebay as IT departments upgrade their equipment. Battery condition wouldn't be an issue as isolation is your only need.

Another source of transformers is automotive battery chargers and Malibu light power supplies. I see a lot of these at garage sales. Hooking two reasonably matched transformers back to back as previously mentioned would get you an inexpensive isolation solution for your bench.

I once converted an S-38E (bought without tubes) using the power transformer from a junk audio generator. I used a silicon diode to replace the rectifier tube and rewired the other sockets for 6 volt filament tubes. It worked fine. Just make sure the 6.3 volt winding will power the remaining 4 tubes.

Regards,

Ron Banks

I picked up the following items at a flea market today:

http://www.eskimo.com/~p0lez1/8u/UNKNOWN1.jpg

http://www.eskimo.com/~p0lez1/8u/UNKNOWN2.jpg

The first radio covers longwave and medium wave, from 200 KC to 2000 KC.

The second radio covers shortwave, from 2 mHz to 20 mHz.

The unit on top is the power supply.

Obviously, they are WWII-era military boatanchors, but all markings that describe the model number, equipment type, and what branch of the service they were made for are gone, and I've never seen any like this before.

Can anyone out there ID these?

Does anybody have information on them?

-Scott

I had exactly the same problem with an S-53.
After checking around with some people with experience I removed the 2
wire power cord and the two capacitors from line to chasis.
I then installed a three wire cord and connected the ground wire (green)
to the chasis. I did not install any capacitors from line to ground.

Works like a charm! And it is safe!

This fix works just fine and involves an absolute minimum of work and
cost. However, for the purists, it does involve modifying the radio;
even though it is a minor mod and easily reversed if you prefer to live
dangerously.

Still wonder about the guy I bought it from since he had it sitting on a
metal radiator (one of those old hot water things which I assume would
be grounded). Maybe that's why I got such a good price.

Good luck
Dave VE3HLU

First a good schematic for your specific model helps (their were 5? versions
of the S-38 model)

S-38 Schematic

http://www.nostalgiaair.org/Riders/showinfo.asp?PATH=HAL&IMG=_HAL_15-59.gif&
INF=S38

This was discussed at some length in December 2001 on the boatanchors forum

[earlier post]
---
Some useful links for further research (and ideas):

http://antiqueradio.org/halli08.htm

Here is an excellent web site for S-38 restoration notes. He even
demonstrates how he "recast" the knobs and notes that the rubber isolators
are absolutely necessary for a SAFE chassis (AC/DC) with the S-38.

http://www.concentric.net/~Stwradio/hals38.htm

http://www.concentric.net/~Stwradio/hals38.htm#Hallicrafters%20S-38%20Restor
ation

and more S-38 links !!
http://www.concentric.net/~Stwradio/hals38.htm#S-38%20Links

add an S-meter
http://antiqueradio.org/art/smeter03.jpg

http://antiqueradio.org/smeter.htm

The Hallicrafters Collectors' Web Site:
http://www.w9wze.org/

Here were my notes on the internal isolation "torroid transformer"
discussion for the S-38:

The UK audio designers gave me an idea to look at a toroidal transformer, as
a possible isolation transformer under the S-38 chassis, instead of the
traditional external isolation transformer Stancor P6410 (50 VA rating).

I received and e-mail for Brian Gladstone, Director of Engineering at
Plitron Corporation in Canada
http://www.plitron.com

BTW S-38 draws 30 watts at 110 Volt according to specs

Plitron makes Toroidal transformers, and by my measurements one of their 50 VA units will slip right in under the S-38 chassis. You can mount it with one screw (use the hole for the old multi-section electrolytic).
You can select from a couple of secondary voltage (110, 117 vac ) models.

Presto, same $ 35.00 USD price (thanks to CDN / USD exchange rates) as a separate Stancor P6410 (50 VA rating), without hauling around an external unit.

The AC power cord (on this particular unit under discussion) must be changed to a polarized plug &
fused as well as the rubber isolation mounts repaired/replaced. Then you will again have a SAFE chassis around children. A power switch, if desired, could be mounted on the back chassis (or rework the receive/standby switch on front panel).

I e-mailed to Bob Eslinger, KR1U and he would be interested in hearing from S-38 restorers who are using this approach Torroid transformers, due to their low profile, might be a solution for some of his antique radio restoration clients wishing to maintain appearance, without the external isolation transformer.

> How so you use Deoxit? Do you just spray into the holes, wipe off the
> excess and reinsert the tube?

I have three forms; the D100S-2, the D5S-6 and D100L-25C. For tube sockets I recommend the full-strength stuff, and rather than use the spray can I'd use the long capillary-tube gizmo that comes with the 25 ml container. Basically: get it all over the pin and the socket contact, then work the tube in and out of the socket, wiggle it, etc. Whatever makes the pin rub against the contact surface of the socket contact is what will clean the socket.

The D100L-25C is full-strength in a tiny bottle. It only seems expensive. I bought my first bottle in 1995, have used it on just about every contact I could get it on, and I still have about 1/4 bottle left. Their site has gone Javascript so I can't see if it's still offered on their site, but some electronics distributor around you should have some left if they don't.

Use the 100% stuff for tube sockets. The 5% stuff is okay for pots and switches and uses where you need to spray a lot of the stuff onto the contacts, but when there's only a small amount of surface that needs it, the 100% stuff works better and isn't wasteful.

Of all places, Radio Shack has at least some forms of DeOxit in their catalog. Not available in the stores, but they can order it for you.

GRE claims they still support the receivers on their webpage :-)
Drop 'em a line a see if they'll send you a free schematic. Otherwise
try the 'pay' route with W7FG, Tannenbaum, etc.

I've built and used the TenTec 1551 Speech Processor Kit.
http://www.tentec.com/amaccyKit.htm#1551store
Worked quite well on an old Atlas 210X. It's a small board so you
could probably install it inside most boatanchors.

If you want an RF speech processor, you may be able to find one of the
Daiwa's that were supposed to be quite good, RF-440, RF-660.

The RBM and RBS are nice receivers, albeit with a somewhat limited HF spectrum. Beware of the
bandswitches, though. They get dirty and they are a bear to get at (removing each of the underchassis "cans". These receivers also have a problem with bad APC variables. The hex retaining nut cracks and the rotor springs back and shorts the things out. If only they had used EF Johnson APC's!!! Good luck with your restoration project. It'll be worth it. BTW, I have the manuals for them.. de Jeep/K3HVG

Basically it a peddler mentality and they feel that discussion groups
attract potential buyers. Kinda like walking into a radio club meeting
and announcing "Hey fellas, come out here and look in the back of my
station wagon to look at what I have to sell ya."
Funny thing is that I never see these regular FA guys participating in
'fix-it' discussions but their ads often indicate that they intimately
know what they are selling and maybe that represents a big loss of
knowledge and assistance to us hobbyists.
No law against that. Give 'em a break...just as you would anywhere
else.
:-)

Boy, you must be some kind of psychic or something. I have a Scott RCH
on my bench right now, bought on the same day I acquried the RBM/RBS
sets, that has the same problem you are describing-The oscillator
trimmer capacitor is "sprung" on band 5, rendering that band
completely dead. I discovered it less than 15 minutes before reading
your post!

Fortunately, the frequency alignment of band 5 of this set seems to be
right on the money with the trimmer completely open,so I won't have to
mess with it further, but it does seem ironic that such a well built
rig could be knocked dead by something so trivial.

How do I go about getting copies of the RBM/RBS books from you?

Joe,

Give it time...I think eBay will burn itself out.

If you compare the winning bid prices to what they were a year ago you will see they are down. I am hearing many more comments about guys (myself included!) who have gone back to doing swaps "the old fashioned way." I think all of the "real" boatanchor enthusiasts are tired of the "shipping/handling/packing" fees that these charlatans are adding on to the top of their sale price and the insincere "I don't know anything about this item but it looks like it works" description. These guys must think we are real buffoons.
So give it time. Too bad, too, because it was a pretty good concept when it started out.

Good discussion and great points. Of course, Mr. "Henry Amp" did
provide substantive technical info and opinion while bashing Mr. "Yaesu
Vintage Amp".

But I'll toss out some "content" to the list.

I've been restoring and refurbing my Heathkits for a couple months. I
got an SB-303 off eBay, this one was a 8 on the 10 scale electrically
and build-wise but a 5 / 10 cosmetically. A previous owner smoked.

I cleaned it up and it looks 9 / 10. I need to do a little more but
it is coming along.

I'm also working on my old SB-101 and have the idea of using the 303 as
an external LMO for the 101. Like a lot of guys do with a KWM-2A and
75S-3C.

Strangely, the Heathkit manuals don't mention this. Also, the 303
manual lists different mods for the SB-400 and SB-401 but no mods
for the SB-100, 101, and 102. Is there a subtle problem that I'm

missing?

I'm not a "collector" or going for historical purity but I am careful not to cut the metal or make changes that cannot be easily reversed.

For example, early Heathkits used Allen setscrews and later ones used blade setscrews. I've been replacing the blade setscrews with stainless steel Allen setscrews simply because they work better. I keep the blade setscrews so that if a future owner wants to, they can restore the rig to historic accuracy.

One reason that I'm replacing the setscrews is that the typical Heathkit builder jammed the knobs on at different depths. I space all the knobs to 1/16th inch using a feeler gauge. This is after lubing and cleaning the controls and spacing the controls themselves to a uniform depth. I also clean the panel underneath the knobs, get it looking bright and tighten the aluminum knob skirts with a drop of superglue. I clean and polish the knobs too.

My goal is to freshen up my old Heathkits to as close to showroom display quality as possible.

I don't have a lot of time to work on these radios as I'm scrambling to earn a living as the economy continues to unwind and we plunge into a second running of the U.S. Great Depression (I'm half serious here, caution is advised.)

My goal is to get these old radio's back on the air, get them looking and working well.

Hi,

I have some 6U5 magic eye valves in stock. They are unused and in
original boxes. The label is Haltron, but I am pretty sure that they
are rebranded US manufacture. These can replace EM 34/35 if you just
change the socket and alter the resistors a bit.
The price is NOK 186.70 each - about US$ 23.65
Shipping to anywhere in the world!

Best regards,

Arnold Goksyr

They're also packing way too much irrelevant crap into the radio listings. I don't need thousands of "Mint Collins Baseball Cap" types of listings to peruse. It's just become to damned tedious. Greed has driven the concept into the ground.

Today's 5,976 listings is way too many!

By the way, how many Henry amps is that guy selling when he has time to list and sell a "Rare Gonset Speaker"?

Wow, that sounds like a product liability issue for Hallicrafters.
Guess that wasn't such a big issue back when we were growing up.
Perhaps it's a good thing you DID have the chassis grounded, so it
wasn't YOU that ended up completing the circuit back to earth. I'm
truly thankful for the contributions you've made to the ham community
since then, Roy. :-)

Fortunately, I never had such a problem with mine like that. Of
course, an isolation transformer won't necessarily protect against
such arcs, and it's also a good idea to have an appropriately rated
fuse (an amp or so?) in the circuit. So, for the OP...get an
isolation transformer that also has a fuse. The schematic I looked at
didn't show a fuse in the radio. I wonder what one of our product
safety engineers would say if he looked at an S-38 or similar radio
today!

Cheers,
Tom

Hi Bob,

I have time to list things as I thin out and go through my over 200 different old vintage radio collection. My friends locally have seen and I put on club presentations of my old gear. Many have been to my home and have enjoyed my museum of old Ham and BC radios from the 20's up through 70's gear.
I have no idea why you are bashing me for properly listing "FA" ads.
Jealousy?

So, if you have a job, this means you would not have time to operate on the air or time to make a posting on a newsgroup?
Absurd!

I have sold numerous vintage items and bought many of my current collection from this and rec.radio.swap newsgroups.

From what I hear, the people who have bought items from me, whether for sale or auction, were happy that I posted them here. The real collectors are those who enjoy these great radios, not the few who whine about listings they either can't afford or don't want.

If you don't like it, don't look at my postings.

To answer the original question of why multiple ads, this is because there are multiple, separate and DIFFERENT items for auction, the listing of which will not fit on a single line! Duh?

I play by the rules and there is still somebody who just can't stand it. Whatever "it" is!

I've wondered about the "my cousin's neighbor said it worked great when they packed it away in dry nitrogen but of course, I can't guarentee it." story line.

I have corresponded with a couple "sellers" who genuinely didn't understand what they are dealing with. One included a picture of an SB-200 with power to the tubes and the HV shield off. Whoa, wait, do you realize that there's 2,000+ VDC right there!

I guess someone started showing internal pictures and everyone else thought that was the thing to do.

I have repl def bathtub caps in the past. They sometimes leak red oil,
and it softens and destroys the insulation pads under the terminals. These
caps are the metal cases that look like bathtubs, and have three 0.1uFd
caps. If you find one and want to keep originality and the terminals are ok,
remove it and unsolder the back plate free, dump the contents and replace 3
orange drop caps inside. Wire each to a term and tack solder the back plate
on. Great RX but they make 'em heavier each year!!!

From: k9sqg@aol.com
Message-ID: <20020610220942.16126.00000504@mb-bd.aol.com>
Source record: 41117

Obtained an RF deck for the Drake L7. I'm going to remove the grid meter and possibly the on/off switch. The internals seem to be there with the exception of the tubes and one parasitic suppressor I believe. Doesn't seem like any mods and the insides seem to be complete and unmodified. The front panel is in bad shape but could be restored with a set of plastic inserts. The end caps are missing. At any rate, a lot of parts will remain and are for sale. In fact, the unit would be an excellent start for building a legal limit 3-500Z amplifier. Useful parts include the plate meter, input coils, pi-network output coils, tune capacitor, load capacitor, change-over relay, filament transformer, meter switches, fan, etc. etc. Let me know what you need and what you'd like to offer for it. Unfortunately, I cannot ship anything overseas.

Thanks for reading the posting.

> --Myron.

I'm having a hard time picturing this. The BC-221 was a really stable VFO with a great dial. I can't see translating the stability to VHF at that time period. So is this thing (or things) a low frequency oscillator with the harmonics used (which is the way the BC-221 works), or is "frequency meter" a relative term, and at VHF neither the accuracy or the stability considered as important as at HF?

And then there's still that Drake "monitor" that was brought up back in February, that nobody knew what it was used for. The schematic sure looked like an oscillator, at VHF, and it's original purpose seemed vague. It sure wasn't a "frequency meter" as we know the BC-221, but at VHF, it just might have been the thing.

Because you're drawing more current through the power supply. The
higher the current, the higher the ripple, the higher the ripple, the
higher the AC through the cap.
```

# 5093. FS: Yaesu FRG-7, excellent condition

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-11 03:55:54 UTC
From: maritimus49@aol.com
Message-ID: <20020610235554.20098.00000350@mb-cl.aol.com>
Source record: 41121

I have for sale the Yaesu FRG-7 communications receiver. It is in great working condition and looks excellent. Please check out the photos at ebay #1354876755. I was the high bidder for this receiver but I just acquired an Icom R75 so I have decided to sell the Yaesu. It is very sensitive and has remarkably accurate frequency readout and stabilty. The audio quality is also smooth and very pleasing either from the front-firing speaker or an external speaker. Quite stable enough for SSB reception as well. The FRG-7 can be powered by 110 VAC, 12 VDC, or by an internal battery pack of 8 "D" cells, very unusual for a communications receiver. It will be packed very carefully in multiple layers of thick bubble wrap before boxing. I am asking $250/OBO because of the excellent condition. Thanks for looking.

I have a rather rare Morrow CM-1 broadcast band set for sale here.
It is a neat little radio in a silver metal cabinet, that was
apparently used to alert radio stations as part of the Conelrad
system. However, it has a full band dial and is in totally gorgeous
condition. Makes a great little AM band table radio

Front panel sports an s-meter and the usual controls.

I would like $50.00 plus shipping if anyone is interested in it.

Please e-mail me for photo.

Very cool old tube theory course from NRI (National Radio Institute)
Published in 1929. 29-page booklet, staple bound. Many diagrams,
schematics, and theory on tube amplification in radio reception.

This thing was similar to a BC221 except the oscillator was in the 20 to 40 MHz
range. It worked the same as a BC221 and the harmonics went to (I think) 1000 MHz.

# 5105. R-390a Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-11 18:00:24 UTC
From: Tony Angerame <tangeram@lucent.com>
Message-ID: <ae5dfs$a37@nntpb.cb.lucent.com>
Source record: 41133

Well finally I've acquired the ultimate BA Receiver and in great condition too. I've read Chuck Rippels great doc's on the 390a. Thanks Chuck! But being the cautious individual I am I thought I'd pose this question to the group before I reinvent the wheel. It seems as though the mechanical frequency linkage is slipping someplace. When I disengage the calibration clutch sometimes I can zero beat the cal signal with three zeroes in the dial and sometimes it's off...way off like about 20 kcs high. It seems to change as I spin the dial a few times. Which leads me to believe something is slipping. I have already found the bfo shaft coupler loose. I just need to know what and where to look for. With the clutch disengaged from the counter I have a rather limited range. I'd say about 5 kcs is this normal? I seem to remember a wider range but then that was when I was a twenty year old op. Time flies! Thanks in advance for all those who reply.

# 5106. Hedgehog Audio transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-11 18:18:44 UTC
From: John Morris <moe@email.msn.com>
Message-ID: <erJW11YECHA.1836@cpimsnntpa03>
Source record: 41137

Anyone ever heard of one of these. A piece of paper was attached that said it was a "hedgehog" audio transformer. I got one in a lot of other radio parts from a deceased ham. Could be a military item.

The shape looks like a small electric motor casing w/o the shaft and a mounting plate fastened to the side. It is about 1.5"x1.5"x2".

Thanks for any help.

John - WB&#65533;RLD

# 5107. Re: BC-603

Newsgroup: rec.radio.amateur.boatanchors

From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3D0661FA.DFFF29BE@erols.com>
Source record: 41134

Hmmmm.. the BC-603 receiver is an old tank radio set (FM) covering 20-27 MHz. It has the 10 chrome push-buttons for pre-set tuning or a thumb-wheel manual tuning. They're OK, I guess, but have little or no use on the ham bands. The BC-683 will at least cover 10 meters. de K3HVG

Source record: 41135

Try cleaning it up it may be so badly gummed up the clutch is slipping.
Can you at "least" turn the KC's with one finger (with lots of effort) ?
Try removing the clutch knob in the max unlocked pos , turn the shaft 1/2
turn tighter reinstall knob exactly where it was.

The end points on the PTO could also be off (see Chucks page)

>With the clutch disengaged from the
> counter I have a rather limited range. I'd say about 5 KC's is this
normal?

Thats all I get on my (non A 390's)
If you need more (varying band to band) the crystals are shot from running
the ovens for 30+ years,
The ONLY fix to have a tight R-390 is a good cleanup and replace ALL the
Xtals (around $250)
I highly recommend the Dallas Lankford AGC and BFO injection mod for SSB.

-Joe

Source record: 41138

Thanks for the info Joe. I'm hoping for the clutch! One finger won't do it. I wouldn't be surprised it feels a bit strange but it has been a number of years since I had my hands on this beast. Slow and steady wins the race....BTW I searched on Lankford but couldn't find any URL's If you have one that'd be great but don't look too hard as I use the R-1307a Rycomm with a 7360 Product Detector for both the r-390a and my sp-600. Sounds great I'm glad I saved the old Rycom.

The Frederick Amateur Radio Club will be hosting its annual Father's Day Hamfest on Sunday, June 16th, rain or shine, at the Frederick County Fairgrounds on East Patrick Street in Frederick, Maryland.

The Hamfest features a large amateur radio, electronics and computer flea market, new and used radio and electronics equipment, antique radios, computers, tools, cables and other technical and hobbyist items. Good food and refreshments are available.

Access for flea market setup starts at 6:00 AM. General admission opens at 8:00 AM. Free testing for FCC Amateur Radio licenses will be conducted, starting promptly at 9:00 AM.

General admission is a $5.00 donation to the club. Flea market spaces are available for $5.00 each plus one general admission. For more information, visit the Father's Day Hamfest web site at http://www.qsl.net/k3erm/ .

---------- Forwarded message ----------

"ALL STATIONS, THIS IS GRIMETON RADIO, SIERRA ALPHA QUEBEC"

The annual transmission from Grimeton Radio/SAQ in Sweden with the
Alexander alternator on 17,2 kHz will take place on Sunday the 30th of
June at 08:30 UTC and will be repeated at 08:45 UTC, 12:30 UTC and 12:45
UTC.

The station building is open to public during transmission.

QSL-reports are kindly received:

- via e-mail info@alexander.n.se or
- via fax +46-340-674195 or
- via ham call "SM6NM" via Swedish Amateur Bureau (SSA) or direct via CBA or
- via mail to Alexander - Grimeton Veteranradios Vaenner, Radiostationen, Grimeton 72,
SE-430 16 ROLFSTORP, SWEDEN or
- via amateur radio QSO with the call "SA6Q" on the following frequencies:

09:00-12:00 UTC 136,8 kHz CW

07:00-08:00 UTC 14035 kHz CW 14215 kHz SSB
08:00-08:15 UTC 7015 kHz CW 7050 kHz SSB
09:00-10:00 UTC 14035 kHz CW 14215 kHz SSB
10:00-11:00 UTC 7015 kHz CW 7050 kHz SSB
11:00-12:00 UTC 14035 kHz CW 14215 kHz SSB
12:00-12:15 UTC 7015 kHz CW 7050 kHz SSB
13:00-14:00 UTC 14035 kHz CW 14215 kHz SSB

Also read web www.alexander.n.se

Note: QSL-cards to "SAQ" are not possible via Swedish Amateur Bureau (SSA)
because SAQ is a commercial call sign and not a member of SSA.

When giving QSL to "SAQ" also please add your snail-mail address, because,
of the same reason, we can not send QSL-cards via bureau, but only direct
via mail.

QSL-cards to "SA6Q" are OK via bureau.

Regards

SM6NM/Lars

This coming Sunday....

!! ** More Buyers PARKING available ** for details see
http://web.mit.edu/w1gsl/Public/flyer

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday June 16th 2002
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

********** $1 buyers discount with hard copy of this notice ************

<<<<<<<<<<<<<<<<<<<<<<< cut here >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

Mail the coupon below by the 5th of the month to be a Prepaid Vendor.

FLEA at MIT 2002 Rates

SELLERS

This year each vendor must have a Cambridge Vendor License.
We will do all the paperwork to get the one day Cambridge licenses.
To keep the spaces affordable we are discounting your first space.
To use your spaces the named vendor MUST be present.
Rates include one admission per space.

Season Pass $99 First Space - includes $70 for Cambridge Vendor Licenses
$70 additional spaces

Advance $17 First space - includes $10 Cambridge Vendor License
$12 Additional Spaces
Must be received by the 5th of the month.

Gate Admission $20 First Space - includes $10 Cambridge Vendor License
$15 Additional Spaces
Admission is after the prepaid vendors

Early Bird Buyer -Admission after the prepaid vendor line is admitted. ~ 7:15AM
** You may not sell. **
$15 per person at the gate.
$70 Season Early Bird Buyer

Yea this Hollander guys a real abusive prick, perhaps he will croak across
the B+ in one of those linears.
Half of the cache file on this NG is FA:s 50% of them him.
The "Da" post about all the links not fitting on one post was a quite a
masterpeice :)
I just set up my Kill file to dump ALL 'FA"s

Regards, Joe

> Thanks for the info Joe. I'm hoping for the clutch! One finger won't do
it.

One finger cant turn the KC's ?........and its an "A"model...now that stiff
!
if you dont know these just clean it up with out disassembly.
TAKE YOUR TIME , the results are worth it

Get together some tooth, typewriter, paint, pipe cleaner brushes.
Lay front over an old baking tray.
Scrub up with kerosene, rinse with spray brake parts or electric motor
cleaner, ......let dry
**Be sure not to splash the counter wheels, paint, !!**
Then work the racks rollers with tuner cleaner and Q-tips till free.

Afterward use a 50-50 mix of Marvel Mystery and synthetic oil in a needle
applicator.
Work the dials, This penetrates real nice.
Neatly applied clear Silicon grease on the cams.
My 390 (non A) with more gears and racks can be turned with my pinky yet has
no detectable backlash

Regards -Joe

Also, keep in mind that the angled spur gears that run the counter can
be out of adjustment or stripped. Also, check the gear clamps in the
MHZ part of the dial.

Have fun

# 5135. FS: 1949 Link 30-50 MHz Transmitter-Receiver in Cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-13 01:21:25 UTC
From: David <dmnance@earthlink.net>
Message-ID: <3D07F392.870767ED@earthlink.net>
Source record: 41063

Link Radio Corporation FM Transmitter-Receiver Type 250-UFS-A. This 1949 unit covers 30-50 MHz and has an output of 250 watts. The unit is housed in a nice 78 inch high cabinet, which is 24 inches wide and 15 inches deep. Has hinged doors on both the front and rear, a bank of five meters across the top, plus a light and resistance heater. Requires 115
VAC, 50-60 Hz for operation. Unit consist of a 2000 volt power supply in the bottom of the cabinet and five (5) 19-inch rack mounted chassis, including a 50 watt exciter chassis utilizing two 807's and a power amplifier chassis utilizing a single 250 TH final.

Here are the links to nine photos I took of the unit a couple of weeks ago:

http://home.earthlink.net/~w4sse/link1.jpg
http://home.earthlink.net/~w4sse/link2.jpg
http://home.earthlink.net/~w4sse/link3.jpg
http://home.earthlink.net/~w4sse/link4.jpg
http://home.earthlink.net/~w4sse/link5.jpg
http://home.earthlink.net/~w4sse/link6.jpg
http://home.earthlink.net/~w4sse/link7.jpg
http://home.earthlink.net/~w4sse/link8.jpg
http://home.earthlink.net/~w4sse/link9.jpg

This unit has not been operated in a number of years. As far as I can tell, it is complete, except for the 866 rectifier tubes (they were used by the previous owner for another project). I did disconnect the power transformer and temporarily removed it when I transported the unit to my QTH. The five chassis can also be easily removed and they all interconnect via plug-in cables.

Cosmetically, this unit is in very nice condition. Both front and rear doors have key locks and I have the keys. Other than dusting it off, I had not attempted to do much cleaning. What appears to be rust on the front door may clean up.

The complete documentation for this unit is included. Price is $250. I prefer to sell this as a complete unit, since it is so nice and an interesting piece of radio history. However, I will part it out if no one is interested in the whole unit. The cabinet would make a great start to a big plate modulated AM transmitter.

This item is offered for sale "pick up only" in Roanoke, Virginia, unless you desire to purchase the individual components separately. I can ship the decks, but not the cabinet. I will be happy to answer questions if you are seriously interested.

73,

David Nance - W4SSE

Moving to another state. Lot's of stuff to sell:

Heath DX-100 most of the "B" mods, grid block keying, improved load control. New final and Mod tubes. Cabinet needs paint, 3 non original knobs. Used regularly on 40 CW. $175.00 Will deliver or meet you up to $150 miles of Boone, NC

Hallicrafters SX-43. Just orange-drop re-capped, weak tubes replaced, out of tolerance resistors replaced, controls and switches cleaned. Aligned and calibrated. Could use some touch up paint and better cleaning. $175 Plus shipping or will drive up to 150 miles of Boone, NC

Hallicrafters S-77A. Just orange-drop re-capped, weak tubes replaced, controls and switches cleaned. Aligned and calibrated. fair paint, lettering complete except for damage to letters E and R in NOISE LIMITER. $100 shipping.

Hallicrafters S-53. Just orange-drop re-capped, weak tubes replaced, controls and switches cleaned. Aligned and calibrated. Not original speaker. Great knobs, appearance on the low side of fair but salvageable. $50 plus shipping.

Tempo-One 80 to 10 meters. Black panel. Just aligned on receive. Fantastic receive but no TX output. It slowly went away over the last couple years. Assume it needs a new pair of 6JS6 finals, but not willing to invest the money. ( way too much other gear here ) with matching power supply. Looks great. With Sure 444 desk mic, $100 plus shipping.

Hallicrafters S-51. Looks very good. NEEDS filter cap and could use complete re-cap and align. Never got around to this one, and ran out of time. $50 plus shipping.

Heathkit GR-64 receiver. Extremely good shape. No cracks in panel plastic. Everything works. Just aligned. Front trim intact. One small knob slightly out of round. $50 plus shipping.

Hello Boatanchorites put your thinking caps on. Does anyone remember the Sonar SRT-120? Looks like it's from the early 50's maybe even a bit before. Uses a 5894 in the final modulated by a pair of 6l6's. I thought I had seen 'em all before this one. Copper plated cabinet....on the inside. Chrome strips on the outside. Real art deco Flash Gordon type stuff...love it. Comments on this radio?

Just got this radio secondhanded a few days ago. This radio requires a 13.5V power supply, but I've just been using it as a receiver for now, hooked up to my Astron RS12A supply, and worked fine for about 3 days and have been receiving many QSO's from all over. But have never transmitted at all on this radio, don't even have the mic plugged in.

Today when I powered it up, the blue LCD freq display on the front failed to come on. The radio was obviously getting power, and the meter lamp came on, along with speaker output, but no front display. Checked voltage on power supply - putting out 13.71V. Tried the tuning knob but could not tell if the receiver was cycling through freqs or not. Just a fairly steady low hiss of no signal, so I can't tell if the tuner is working or not anymore.

What did I do wrong? Why the sudden loss of the LCD screen? I could not check Amp output on the PS but it is rated at 9A continuous and radio was working fine until today. Has anyone had similar problems with this unit? What can I do to fix it?

Thanks,

C.N. Brown

Hi and thanks for looking...

I live in Corsham in Wiltshire ( England )- about 4 miles to the west of Chippenham and
have the following equipment for sale -

Collins 651S-1 HF receiver. Case slightly scruffy. Complete workshop manual and spare VCO module. £500.00 ono.

Kenwood TS530S - HF Transciever. new 12BY7A driver and new 6146B's. With box but photocopied manual. £200 ono

Daiwa CNW-419 HF 200W ATU. Cross Needle VSWR meter. Complete with box and manuals. £150.00 ono

FT290R - 2m multimode rig. With Mutek front end, Leather carry case and in nice condition. £125.00 ono

FT290R - Case slightly scruffy and needs new LCD lamp ( which I have not got around to replacing !! ) - £90.00 ono

Daiwa LA- 2035 VHF linear amplifier - FM/SSB - £50.00 ono

Microwave modules VHF Linear Amplifier - MML 144/30-LS - £75.00

Yaesu FT-23R 2m handheld & FT811 70cm handheld + Homebrew charger £100.00

Please email me if you are interested in any of these items...

## 5162. Anyone recall this boatanchor?????

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-13 23:49:41 UTC
From: "ckh - Too Much SPAM"
Message-ID: <hdwX38NCLQJC-pn2-CdW8uCzVQrCD@localhost>
Source record: 41090

About 1970, one of the mainline radio companies made a CW only transceiver. I'm not thinking of the Heathkit QRP rigs, this thing was a competitor and came out after the Heath.

It wasn't TenTec and might be the Drake 2NT but I don't think so.

Anyone remember it? I went to highschool with the fellow who designed it but don't recall the manufacturer or anything about the rig. I think it wasn't very successful.

2NT was a TX only. I would be interested too.
I believe Dentron came out w/ a line of single band rigs- but these were
SSB- and maybe CW too.

# 5172. HP 113AR Frequency Divider and Clock

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-14 12:47:56 UTC
From: mitch.janoff@verizon.net
Message-ID: <52ef6ab.0206140447.6ee2c62b@posting.google.com>
Source record: 41000

I am trying to fix an HP 113AR Frequency Divider and Clock. The HP113AR takes as input a 100kc output from a frequency standard and divides it down to a 1kc and 1pps. The 1pps comes off a photodiode. I have a bad Thermistor in the output circuit from the photodiode. The HP part number is: 0839-0012. The manufacturer was Victory Engineering Corp of Union NJ. The HP manual doesn't provide any additonal information on this component. Does anyone have more information on HP components and can determine the value of this thermistor? The unit was made around 1961.

Right now I'm getting about +400mv at the 1pps output. The 1pps should be about -15 volts. In addition, it is possible that transisor Q13 (2N1108B)is also bad.

I've posted the schematic and a page from the Operating and Servicing Manual at www.geocities.com/precision_time.

Any assistance would be greatly appreciated. thank you.

Maybe TenTec Century 21? It was CW only, and about 80W power (not QRP).
But it wasn't around as early as 1970.

H-m-m-m...

Cutting my ham teeth on the rigs of that era and being a 100% CW operator for most of my ham career, I would would guess I probably have owned a "CW only" transceiver if it was built in the 1950s, 60s or 70s.

The first rig that comes to mind (although you stated it wasn't a Heath you did not think) was the Heathkit HW-16. This wasn't actually a "transceiver," it was actually a separate transmitter and receiver in one self-contained box. But it operated like a transceiver and ran a 6GE5 at 90 watts input on 80, 40 and 15. The power supply was self contained and you could run it either with crystals or an external VFO. The HW-16 was offered from 1967 to 1976. Too bad it still isn't.

Then there was the Ten Tec PM-1, PM-2 and PM-3 CW-only transceiver. I owned one of these (and still do) and have often wondered how Ten Tec not only STAYED IN BUSINESS but actually grew into the the company it is today having produced the "Power Mite" transceivers as their initial product. What a clunkers these transceivers were! 5 watts input, 2-bands (unless you bought one of their optional accessories for two more bands). Full band receive but CW-only transmit. Power supply was from a battery or cigarette lighter plug in your car for 12 volts. All 3 versions came out in 1970.

Although you said the rig you are seeking was circa 1970, in 1977 Ten Tec offered a series of CW-only transceivers called the Century series. These were 5 band, self contained AC power supply CW only rigs. I own the Century 21 Digital version, although its predecessor was the Centry 21 analog dial version. A Century 22 followed a couple years later with more refinements. The rig runs 40 watts output and is a pretty darned good li'l transceiver.

You stated the rig that you are seeking to identify was CW only. These are pretty much the only ones offered in the 1970 era, besides of course those you have already identified such as the Heath QRP transceivers (HW-7, HW-8 and HW-9). By the way, a friend of mine owns an HW-9 and the receiver portion is one of the most sensitive and selective of even full sized rigs that I have ever had the pleasure of using.

There were quite a few self-contained power supply rigs during that era but they also offered SSB in addition to CW. The Swan 270 Cygnet, Swan MB-40 and MB-80 monobanders, Swan 100, Swan Astro 102, 150 and 151 (later...like late 1970s), Atlas 110 (1978), Atlas 210X and 215X (technically an "external" power supply but they produced a nice little console with a built in supply into which the transceiver slipped and created a single cabinet), Hallicrafters FPM-300, Ten Tec Triton II and Triton IV. There was also a company called KW Electronics that produced an CW/SSB transceiver with a

self contained power supply called the KW "Atlanta," the KW "2000A" and the KW "2000B" transceivers. Another firm called ALDA produced a 4 band CW/SSB rig but I do not believe its power supply was self contained.

In the early 1960s there were a few transceivers that featured internal power supplies but they also offered CW as well as either SSB or AM. These were primarily designed as mobile rigs but usually could be internally jumpered for 115 VAC fixed station operation. Check out the Hammarlund HXQ-300, Sideband Engineers SBE-33 and SBE-34 and the Gonset G-76 (although its power supplies were not internal). Even Knight offered a nifty CW/SSB transceiver in 1970 called the A-2517, although sales stunk and it died, sadly, along with Knight itself. Its power supply was external, though.

I suppose the Japanese had some too although I have never made any effort to pay attention to them. I guess I feel sort of like Harley Davidson owners feel about Suzuki motorcycles.

I hope this helps in your search.

ZUT,

Vern Weiss, W9STB

As I recall, K4UMI used to have some sort of outrageously high powered
CW rig in his pickup truck, with some sort of weird alternator that developed
B+ for the transmitter finals directly. He called it his "electronic brake"
because when he put the key down, the vehicle slowed noticeably.

I think this would violate the vehicle warranties today....

# 5177. Info Wtd: Calibrating Transmitter TV-10

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-14 19:40:12 UTC
From: Roger Basford <Basford@btinternet.com>
Message-ID: <dIdZK7BcakC9EwfV@btinternet.com>
Source record: 41005

Hi,

I've acquired a piece of British military test equipment, probably WWII vintage and wondered if anyone has any info on it? The unit is a "Calibrating Transmitter Type TV10" and covers 3 to 30 Mc, using either AM, CW or MCW. There is a built-in mains supply that may not be original , a whip antenna base on one side of the cabinet and the microphone is a standard WWII carbon hand mic. The PA appears to be a TT11.

I can't think of a purpose for which this would have been used, it uses a VFO and so wouldn't be accurate enough to use as a wavemeter but if accurately set on a frequency beforehand with a wavemeter it might have been used to radiate a low power signal to allow other radios to be netted to it?

Any info gratefully received!

That shouldn't be difficult. I've not done it, but I had a college friend
who ran a KW in his mobile rig, and he said he used an alternator with the
diodes bypassed, thereby getting AC instead of DC and then used an
appropriate transformer to produce whatever voltages he needed.

Knowing him, he probably wound his own transformer, too!

I purchased the proper dynamotor set for a WWII TCS receiver/transmitter
pair and operated them on dynamotor power just to say I had used
dynamotors! (That was back in my younger, more-foolish days!)

I also have a hand-cranked generator for some old rig (don't think it
was a "Gibson Girl", however); someday, when I find the right round tuit,
I want to build a little tube rig and operate with hand-cranked power.
Should be good for a few points for Field Day, anyway.

Yes, seen that in an old 60's old ARRL book "SSB For The Radio Amateur"
3 phases of the alternator windings into (3) 240-24 volt transformers
"Backwards".
Then voltage doubler on each
The placed all in parallel.

# 5183. Anybody got a schematic for a military TCS-8 (Collins 51Q) Receiver?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-14 22:10:54 UTC
From: "Scott W. Harvey" <scott@scottharvey.com>
Message-ID: <aedple01lpf@drn.newsguy.com>
Source record: 41010

I got one of these awhile back at a swap meet, and I am just now trying to get it going. I have only the receiver portion; the transmitter and power supply were already spoken for long ago.

The radio is all there and is immaculate inside, but someone has modified the front panel connector to use an octal socket, rather than the cannon-like connector it was originally equipped with. Whoever did this mod did an excellent job-no sloppy wiring or cold solder joints there.

With some analysis, I was able to figure out the B+ and filament connections, and I am using my bench supply for power. The receiver powers up normally (no smoke, exploding caps or other nasty surprises) and the B+ appears to be just about right on all the tubes, but there is no sound at all (not even hum or static), and I can't figure out why. I suspect it's something really simple that I have just overlooked.

Since this unit is normally apart of a receiver/transmitter package, there has to have been some way to mute the receiver during transmission. I suspect that I may have to jumper something in this rig to use it as a stand-alone receiver.

Of course, it's also possible that the radio just dosen't work and needs to be troubleshot.

So, at this point, I really need a schematic for this unit. I've gone just about as far as I can go without one. Can anybody out there help me?

-Scott

Way back amongst the cobwebs I seem to remember a bare bones type of rig. Seems like you bought the receiver then a power supply then a transmit module. It may have been Drake or Swan but it could have been Atlas. I don't think it lasted very long which is why you can't find any info on it.

Message-ID: <xWxO8.2868$TP4.202608@newsread2.prod.itd.earthlink.net>
Source record: 41029

Hello to all,
Can anyone tell me what was the value of the four diodes , used in the balanced modulator circuit on the HW-100/101 or SB series transceivers? Am having a little difficulty with carrier suppression. My other problem, weak signals on both 80 and 40. The rest of the band seems normal. The calibrator signals are perfect on ALL bands. Any ideas?
Thanks in advance to all.
Please, if possible, respond direct.

Tony,

A fellow I knew had the Sonar SRT-120 with a homebrew VFO back in about 1958. There were several models 120P and 120CD etc. The CD version was one used for Civil Defense use. Sonar had made gear such as a 10 meter mobile after WW II. They made some VHF gear using the 5894 too. They tried to make some SSB transceivers in the early to mid 60's. I think there was a QST review or write up too. The transmitter is written in several books on tube type transmitters such as Gene Rippen's book.

I do remember he had modified his Sonar to use 1625's in the modulator.

Before getting into the diodes (low leakage germanium matched sets of 4))
Try moving C18 (12pf) to the other side of the bridge for a better null
(some sets dont even need C12)
Also be sure the 200 ohm balance pot is good, shoot wit R-5 (most I have
seen are shot)
Best is to replace with a 10 turn from Mouser
Dont forget C14 is also is used to null (should null midway, C-12 trims
this)

>My other problem, weak signals on both 80 and 40
Check alignment slugs, and 100 ohm resistors by comb brackets (under coil
cover)
-Joe

# 5205. FA: Pair of Wavetek signal generators on eBay

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-15 05:27:26 UTC
From: Terry Perdue <k8tp@home.com>
Message-ID: <2fAO8.191589$352.11885@sccrnsc02>
Source record: 41033

A pair of clean, working, recently calibrated synthesized signal generators, covering 1 kHz to 520 MHz in 1 kHz steps, with vernier adjustment. Output level -140 to +10 dBm, internal/external AM/FM. With Operation/Service manual.

They're item #1740431328 titled 'Pair of Wavetek 3002 signal generators'. Dumb me - by making it plural, a search for 'signal generator' won't find it :-(

# 5206. Re: HELP - Display just went blank on Yaesu 757GX

those 757 's had a bad habit of that a bad power switch was the prob ,
unplug the p.s. and unscrew the side screws as if you were splitting the
radio open
and just lift the lid slightly and put back in place and reapply power to
the radio and it should be ok

Hello,

This great valve databook is still in stock, but it will now be soon
out of print and difficult to obtain. 660 pages with comprehensive
data on nearly 6000 types - European, Russian and American
manufacture. A lot of curves and operation conditions on each type.
This is a very large book of 29 x 21cm and the weight is 2.5kg
You can find more information and pictures of it at my web site
www.demostenes.no

Regards,

Arnold Goks�yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

# 5212. FOR SALE: HALLICRAFTERS HA-1 "T.O. KEYER"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-15 13:31:05 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <3cgmgu0r0amcg825c7hfca8v9fiv5ddb5n@4ax.com>
Source record: 41040
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.swap

FOR SALE:

Hallicrafters TO Keyer in excellent condition.
Excellent for cathode-keying older rigs, or for homebrew stations.

I would say that this is a 9.5 out of 10. All original knobs. Cabinet
is immaculate. Interior looks like new above and below chassis.

Operates on 105 to 125V AC. 10-65 wpm. Adjustable sidetone and
internal speaker for monitoring your sending. Uses six tubes.

Pictures available on request.

The Hallicrafters HA-1 "TO Keyer" - will work just great with those
older rigs that need direct cathode keying. Most of today's solid
state keyers will not do the job.

The Hallicrafters TO-Keyer was the first commerial digital keyer to be
widely marked. The TO has self-completing dits and dahs, adjustable
weighting and speed controls and a monitor speaker.
The TO-Keyer was manufactured in the early 1960s.

This one is in mint condition and comes with a copy of the manual.
Will sell for $85.00 plus shipping

Sounds like a nice little radio. Is it rare?

Anyone know why neither Osterman's nor Moore's book lists Bendix at all? They show plenty of obscure sets, but no Bendix.

PS: I'm almost old enough to remember when "Bendix" meant "automatic washing machine" the way "Xerox" means "photocopier" today. --Mike K. AA1UK

It would not seem hard just to crank the exciting voltage on the field coil
way up, and then pull whatever high voltages you want off the armature. I
can't imagine a typical alternator would break down at 120V or so although
maybe at 600V I could see disaster coming.

Source record: 40949

Hi Gang,

I have a couple of items I'd like to sale or trade.

The first is a "Dog bone" connector that I bought
thinking it was for the RT70/AM65 set, but it's not.
The connectors on each end are marked CX-1211/U with
14 pins. I don't know what it set it's intended to be
used with.
I would like to trade it for the proper conectors for the
RT70/AM65, not necessarly a dog bone, individule connectors
will fill my current need.
I would be interested in know just what this connector
goes to.

The second is two DC-34 crystals for a BC660 transmitter.
one is cut for 3680KC and one for 3790KC.
I have no idea what these are worth, will consider offers.

I'm looking for a nice AM65 to go with my RT70.

Thanks & 73,

Ron

> Please, if possible, respond direct.

Many times the small variable cap flakes out. I had to change that
twice on an old HW-100. Also I think there is a trimmer also that can
cause trouble. It's in the same appx circuit. What antenna are you
using on 80/40? If the CAL signal is equal or stronger than the high
bands , it sounds fairly normal, but you may have an antenna problem??
I would think your diodes are ok. I'd look at the trimmer and small
variable cap before going much farther. MK

Hi Mike some guys sat 1N914 will do fine, I dont thing so
A good diode to use is a NTE555 Silicon PIN Diode
http://www.nteinc.com/Web_pgs/PIN.html

Schottky Barrier Construction more stable and eliminates the "Cat-Whisker"
or "S-Bend" Contact
.....Very Low Capacitance: 1.0pF

The MBD101 UHF mixer carrier diodes http://www.web-tronics.com/mbd101.html
may be worth looking into

Thats stretching things though. It's still listed on e-bay, and if anyone bids on it, that option will vanish. It's an auction with an option to buy if no bids are made. It's my opinion anything listed on e-bay , or any other auction service should be listed as FA. Only private sellers should use FS, and the price should be listed along with the post. But that's just my opinion, and you know what they say about opinions...:/ MK

# 5226. WW11 Military Radio Control Box Japanese or Chinese?

# 5231. Clegg FM-76 220 MHz Local/Remote Mod????

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-16 01:56:37 UTC
From: motg@stratos.net
Message-ID: <efd5c18c.0206151756.5db25986@posting.google.com>
Source record: 40959

As you know the Clegg FM-76 and the Midland 13-509 are vintage 220 MHz crystal transceivers. I own 3 of these radios that I have picked up at hamfest through the years. Almost every one I have ever seen incorporates a modification that appears to be a means of trunk mounting the radio. Does anyone know why this mod was so popular (I'm guessing that theft may have been a big issue as the radio resembles a CB).

Does anyone have a copy of the mod or know where it appeared (Ham Radio Magazine, 73, CQ, QST??)

I would love to get a copy of the mod if you have it.

Thanks and 73,
Frank K9IC

That sounds like the Drake 2NT. I thought it was one of the other U.S.
manufacturers but I was probably wrong. Whatever it was, I recall
thinking that it was a knock off of the Heathkit.

# 5243. SB-102 tube question.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-17 11:26:49 UTC
From: "ckh - Too Much SPAM"
Message-ID: <hdwX38NCLQJC-pn2-MEd47osycH44@localhost>
Source record: 40971

I just received an SB 102 (from eBay) and have a slight problem.

three of the tubes are broken, 5 were rattling around in the rig.

I don't have a positive ID on two of the tubes. Looking into the SB-102 from the operator's position.

What tube is in V10? This is on the board just before the HV/RF cage.

What tube is to the right of V15 (6EA8)? This is the board at the far right of the rig.

I got some rubberbands to try out. These weren't too bad, a buck fifty each.

Note to eBay shippers, you have to pack the inside of a tube rig with bubble wrap or the tubes will fall out of the sockets and many will break.

A militarized Hewlett-Packard 180 with PL-1186A dual-trace and PL1187A time base sweep delay plug-ins. Solid state electronics. Excellent working condition and nice sharp traces. Great scope for working on the old boatanchors. It comes with two new 100 MHz probes and all accessories. Probes are 1X/10X. Also included is the operators manual and the snap on cover for the front panel. $150 plus shipping from 77478. If you need a good bullet proof scope, this is the one to get.

Thanks,

Ron

# 5247. FS: LogiMetrics 925 Signalock RF Signal Generator

Excellent working condition HF signal generator. 50kHz to 80MHz frequency range. All solid state with digital readout. Calibrated attenuator for the output, +23 dBm to -127 dBm. Output frequency can be locked with the signalok feature. Bench or rack mount. Meters for output voltage and modulation %. $100 plus shipping from 77478. Instruction manual included. This is an excellent generator for boatanchor repair. Output frequency is stable and accurate to +/- 10 Hz.

Thanks,

Ron, AB5WG

I'm glad that the FS vs. FA experts spoke up and settled this issue.
Clearly a "Buy-it-Now" item on eBay is a 'fixed price" that can be bought at
that price with the click of a button.

Thanks for setting the issue straight, gentlemen.

That's just the way YOU read it. I consider an auction a sale wherein
the price is determined by bidding.

However, there is no excuse for calling someone an idiot, especially
when he doesn't "understand" something - more especially if he doesn't
understand the way you perceive something. By that definition this
whole group is a bunch of idiots, as is the population at large.

I guess my local dealer doesn't sell cars either. They sure don't have a
fixed price.

>> there is no excuse for calling someone an idiot, especially when he doesn't "understand" something <<

I disagree. If a person is an idiot, it's okay to say it. That a person doesn't understand something may actually be part of the proof that he is an idiot.

>>this whole group is a bunch of idiots, as is the population at large<<

Where do you live? An idiot is a person with an IQ of under 25. By the way, an imbecile is a person with an IQ between 25 and 50 and a moron is a person with an IQ between 50 and 70 or 75, depending on which book you read. The population at large has an IQ of 100 by definition.

# 5263. FS:Yaesu FT-101E Excellent

Having both modern and tube receivers I have to disagree. I've had a 1956 R-390A going for 9 years now and it is my best radio. I've never even aligned it. I guess I've replaced less than 5 tubes so far and it stays on a lot of hours every night.

I've logged a lot of tough stations with that R-390A. I had trouble once because a DX list didn't believe my logs at first due to the nature of the weak station that I caught. That makes you feel good when you know you honestly got it and taped it too. The mechanical filters are good enough for most situations. I did use a NIR-12 with it for a long time with good results.

Another thing about boatanchor gear is that I can repair it easily enough. I sure can't do that with my modern gear. I've got a NRD-535 that is going to cost a fortune to repair since my only option is buying new cards. That is something I definately don't like.

Tubes are pretty cheap. A lot of good guys are selling them for a few bucks apiece. I have gotten around a 1000 tubes for free this past year. I know that ebay prices are artificially high, so why not look around at hamfests? Or check the boatanchor pages for gear at reasonable prices. My 56 Motorola was $300 and it has been a champ for 9 years. I have another one that was $365. My LF radio is a 1943 RBL-5 and it cost $80. Don't let ebay prices discourage you. That is the last place to look most of the time.

Barry

Within the next 10 year nobody will be able to buy at any price, a new RX tube. RF power tubes are all going to metal/ceramic, and the old glass reciever tubes are fast heading the way of the dinosaur. Mark my words, No manufacturer will make new glass tubes in 10 years or less. The existing N.O.S. of glass tubes will continue to rise in price until they are all valued at thier weight in gold or more.
Fact; tubes have a failure rated far,far above that of solid-state devices.
Fact; the laws of supply & demand with drive prices of tubes.
Fact; Nostalgia is a fine thing, but I don't drive a horse & buggy to work each day, but it could still get me there.

100% I.F. level DSP, is the wave of the future, catch the wave, or be left behind in the dust of history.

There's a Drake historical site with pictures -- check google.com

The 2nt was introduced in '66. Had 100 watts cw. Transmit only. Could be reduced
to 75 watts for Novices. You see 'em on ebay now and then.

I am restoring a Lafayette HE-30 receiver.
Due to it being stored in a damp environment,
all the frequency, bandspread and logging scales on the glass have
deteriorated and flaked off.
Can anyone suggest a website where I can obtain
a high resolution image of the glass, so that I can
restore it accurately?
Or perhaps someone out there has a HE-30 and
could send a clear, close-up photo?
Any assistance would be greatly appreciated.

Duncan G4DFV

1966? Then it's probably not the rig I'm thinking of. The guy went to
Yale in 1963 and may have graduated in 1967 so 1966 was too soon.

Although maybe he worked for Drake summers.

I have for sale one set of 6146 tubes, full output, for $25 for the pair, shipped in lower 48. Also have 3 sets of Jan 1625s for sale for $25 a set shipped. These tubes are very good and look new.
Thanks, Charlie Hugg, K5MBX

# 5281. More SX-28 questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-18 16:43:53 UTC
From: cdenker <cdenker@rochester.rr.com>
Message-ID: <Xns923181A92A2E1cdenkerrochesterrrco@24.24.0.14>
Source record: 40908

I'm halfway through recapping an SX-28; so far, so good. It's working on all bands now (after finding a loose wire going to one of the electrolytics, thanks for the hints everybody), much better than when I started, which is encouraging. Time for some more simple questions:

1. The skirts of some of the dials spin freely independent of adjusting the controls; I assume they're just supposed to be crimped in place by the brass insert? Seems like theres a pretty big gap to close up to hold them in place.

2. It's working great on all bands EXCEPT the 5.8 - 11 ; sounds like there's a buzzing probably where the strong stations are. I've not done any alignment (figured I'd wait till recapping's done) nor even thought about the caps in the RF section (don't have the courage yet). Should I be worried? It pulls in stations incredibly well on the other bands, although the calibration is off a fair amount.

3. I get pretty loud scratchy sounds when adjusting the antenna trimmer, but everything looks clean and has been deoxit'd. Ideas?

4. I'm running a speaker off the headphone jack which sounds great; should I not do that for extended periods?

5. Oh, and the s-meter doesn't work, pegged to the right (no suprise).

Now that it's working (mostly) I can see why so many are fond of this radio.

So therefore Simon, you meant "FA" - not FS.

Please?

Probably becasue THEY have never seen one. Bendix certainly made
military transmitters and receivers in the 1940s and 1950s. Just not
in the huge numbers like other manufacturers I expect.

Bendix also made a very reliable DF system which was still in use in the
50s in older aircraft. The Avro Anson, for one.

My 101 is transmitting both sidebands simultaneously. The carrier appears to null ok. The radio also is receiving either sideband in either position. Any advice? Thanks Lew KlNDV (direct e mail is fine)

I also changed out the carrier osc tube. Will look close at the balanced modulator too. Just started playing with this rig. Thanks again

Ladies/Gentlemen:

I'm cleaning out my library (to make room for more stuff!). These items will probably end up on ebay, but I figured I'd give you folks first crack. The condition of these documents ranges from mint, to well worn. In general, I'd depict their condition as good to very-good. The list below shows manufacturer, model number, instrument type, manual/documentation type, and the quantity.

I have arranged documents into sets. If you're interested in a set, by all means make an offer (US$.) I'm also willing to trade for certain crystal radio-related items, (parts, books, etc.) Important! Remove the "999's" from my address to respond.

It pulls in stations incredibly well on the other bands, although >the calibration is off a fair amount.

I'd guess that one of the four coil secondaries may be open on that band, or, hopefully, a lead to that coil, or (unlikely) a bad tab on the bandswitch.

You'll get to that if/when you go after the RF deck caps, though I'd say it's easier to check the coils than to dig into the caps (you have to take the badfnswitch apart, section by section).

BTW I have three SX-28s, two of which almost sort of work, and one which was a better built version than the other two, but its previous owner raided it for the power trans to fix one of the others (go figure). Someday I will relly fix one up, or sell the trio VERY cheap to someone who can met me halfway to Maine. 73, Mike K. AA1UK

Rare Wanzer "Z-Match" antenna tuner. Top of the line model Z4M includes a relative fwd/ref output meter. Has a "in-out" switch, and a switch to change from a "PI" configuration to a "T" configuration. Utilizes 2 750pf heavy duty caps and a 28uh plated roller inductor with a turns counter. Covers 1.8 to 30 mhz. It is physically small 9x8x5, but advertisement states "will handle power far beyond legal limits". It is in exc condition with only a couple of small scratches on one of the side panels. Comes with paperwork.
$175 plus shipping
Thanks
Tim

I have a Triton 540 for sale, it is about a 7 to 8 in appearance, and works 100% (most of the time) It has a problem in that from time to time the audio will have what sounds like static, or "popping" "crackling" sounds. the receive sigs are still there, but the noise is about the same level. It will stop with a "POP" and is quiet again. It's hard to explain the symptoms, but it sounds like maybe a cap is breaking down or something like that. I took the IF-AGC board out and reheated some of the joints and it seemed to fix the problem for several days, but it is starting to do it again. Also, I am running it from a 12 vdc battery and not a 13.8 vdc supply. I don't know if the slightly lower voltage is a contributing factor or not. The PTO has been rebuilt and is smooth. has a new dial cord. Includes the optional CW filter and noise blanker. I have the original manual, complete, but the pages are loose. It puts out full power andI believe it has all the 10 meter xtals. Has the power cord that will connect to a standard non ten tec supply and has a relay wired in line so that the front panel on-off switch will work with any supply. I will sell it as-is and ship and insure it in the lower 48 for $140.00. Please email with any questions. I can send a pic of it for those who are interested.

thanks
Tim

# 5307. FS: 6JS6C & B Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-19 15:07:06 UTC
From: Jim McShane <jimmcshane@prodigy.net>
Message-ID: <u61Q8.2629$vn5.103675050@newssvr16.news.prodigy.com>
Source record: 40933

A gentleman from the UK had these reserved for him, but changed
his mind, so I have these hard to find tubes in stock:

(2) 6JS6B Sylvania branded Zenith, new in the original box, $44.50

(4) 6JS6C, 2 Sylvania & 2 GE, all but 1 GE are new, may be branded
Zenith, some white boxed, $42.50 ea., $36.50 for the very low time GE.

(1) 6JS6C Japan made, used tests good, $18.50

Take 'em all for $250.00. Shipping is free with a purchase over
$75.00 (USA only)

Thanks a lot.

# 5320. Boatanchors For Sale...Pickup in Atlanta

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-20 09:38:45 UTC
From: cacutts@mindspring.com
Message-ID: <aes7r5$68r$1@slb6.atl.mindspring.net>
Source record: 40796

All,

Due to me moving this summer to a location without a basement I must thin down my collection of bostanchors a great deal. All of the following is a "pick up only" at my Atlanta QTH, sorry I don't have the time to deal with shipping right now. Email me with questions or call me at:
404-244-0573 (home)
770-801-4138 (work)

Here is a list of what is for sale right now. I also have thousands of tubes and will be selling them too, there is just too many to list here. If you have a need for some tubes, let me know.

Thanks,

Allen Cutts
N4OZI
cacutts@mindspring.com

The list as of June 20, 2002:

RCA RBC-4
This receiver receives on only one band. Comes with power supply and power supply cable. It also includes a copy of the manual and a copy of the maintenance manual. Asking price of $200

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/rbc.jpg

---
RCA RBB
I have two of these receivers, one is black and the other is a olive color similar to the RBC above. Both do not work. Both come with power supplies and cables however one cable is a homemade cable. They include a copy of the manual and a copy of the maintenance manual. Asking price of $100 each.

No image yet on the web.

---
Hammarlund SP-600
This receiver receives, however it will need to be re-caped in order to improve it's performance. A copy of the manual is included. Asking price of $300

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/sp600a.jpg

---
National HRO-Sixty
This receiver works but after about 30 minutes the audio becomes distorted indicating a problem in the audio section. Only comes with the 75/80 meter coil and a few coils for VLF. 300 volt supply has been re-caped.
Asking price of $250

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/hro60.jpg

---
Gonset GSB-100
This SSB transmitter does not work and will draw a large amount of plate current on power up indicating a possible problem with the grid supply. Orginal manual included along with a spare 6DQ5 final tube.
Asking price of $100

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/gsb100.jpg

---
Hallicrafters HT-37
This SSB transmitter works fine. Copy of manual included.
Asking price of $150

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/ht37.jpg

---
Johnson Viking II
Works great and has been rebuilt in a number of places including the audio section. Has a new screen supply resistor and new caps in the power supply. The 6146 finals are only a couple years old. 3880 and 3885 crystals are included. VFO included also but does not work. Copy of manual included.
Asking price of $350

Image can be seen at:

http://www.mindspring.com/~cacutts/radio/ba/vikingii.jpg

---
Hallicrafters HT-20
Works great and has been rebuilt in a number of places including the audio section and power supplies. Like most HT-20s the paint has peeled in some spots in the front. Has a new 4D32 final installed a couple of years ago. Copy

of manual included and is rack mount with no cabinet.
Asking price of $600

Image can be seen at:

http://n4ozi.dezines.com/radio/ba/ht20.jpg

I think it's one of those items that got tossed under the work bench after final assembly and alignment and most of them never "migrated' along with the rigs. Probably find lots of 'em in the back corners of attics and basements.
I'm going to take all the measurements and start gathering up some parts this weekend to see if I can build one as I've had no luck finding any out there.

give some thought to publishing your findings. If the connectors are
available, this is a natural for a small board run.

# 5325. inverted-L and tuner questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-20 15:23:09 UTC
From: bertsch.3@osu.edu
Message-ID: <aess0t$f7$1@layla.net.ohio-state.edu>
Source record: 40802
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

I've got the classic 170 foot (ARRL antenna book) inverted-L up in the yard, with (so far) eight 133 foot radials and 3 ground rods.

I was going to feed this with a SGC tuner at the feedpoint as an all-band antenna - as it turns out, the SWR measured at the radio end of the RG-8 feedline is around 3:1 on most bands without any tuner, except for 160. The auto-tuner in the TS-850 can easily deal with that, and some series capacitance should take care of 160 meters.

Two questions:

1) Should I be concerned about that much SWR on 20 feet of RG-8 foam coax? Letting the radio's tuner do it's thing sure makes life easier, plus the radio only puts out 10 watts while it's tuning - which makes me feel better about my PA transistors.

2) I'd like to put a RF choke to ground at the antenna feedpoint, to shunt static charges and 60 Hz power line pickup. The choke will probably be a torrid with type F or 77 material. About what inductance does conventional wisdom suggest?

Thanks in advance,
Steve K8ZG

No problem. The additional losses are very small and you certainly aren't
going to damage the coax <g>.

>
> 2) I'd like to put a RF choke to ground at the antenna feedpoint,

As I recall, that's a lot more than you need...a simple 1 meg resistor will
bleed things off just as well, and not affect the performance of the
antenna. Also, somewhere in the back of my brain I have the idea that the
(at one time) readily available 1 mH chokes from Radio Shack would work for
the frequencies of interest...but check that to be sure, my memory is really
foggy about that one and I'm too lazy to calculate the reactance to be sure.

73,

...hasan

# 5327. Re: inverted-L and tuner questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-20 17:31:20 UTC
From: Roy Lewallen <w7el@eznec.com>

Source record: 40803
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

I wouldn't worry about 3:1 on that run of coax.

There are two considerations for the RF choke. One is that its impedance should be high enough to not disturb the feedpoint impedance significantly. The other is that shouldn't dissipate enough power to overheat. The first consideration requires that the RFC impedance be 5 - 10 times the feedpoint impedance. But if you use type 77 ferrite you might have trouble meeting the second requirement, depending on the power you're running. That's because the impedance of the RFC will be primarily resistive, not inductive, over most of the HF range. So if it has an impedance of, say, 1000 ohms, your feedpoint impedance is 100 ohms, and you're running 100 watts, the choke will have to dissipate 10 watts. I'd go with a lower loss material, but then it'll take a bit of work to get enough inductance for the low frequency bands without going too far above self resonance on the high frequency bands.

Roy Lewallen, W7EL

Here is a rough sketch of what I have in mind for an extender board for the Heathkit.
Think it will work??

# 5330. New program - feedline radiation

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-20 21:34:51 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <aethpp$5mi$5@paris.btinternet.com>
Source record: 40807

New Program FEEDPOWR.exe

RADIATION FROM BRAID OF COAXIAL FEEDLINE.

Radiation due to unbalanced feedline currents is often considered undesirable.
It may sometimes be thought useful. The main effect is distortion of the radia-
tion pattern. Power loss in a wanted direction can occur - but how unfortunate
is it? Signals or noise from an unwanted direction can be a nuisance - but how
much of a nuisance? An estimate of the strength of feedline radiation before
taking precautions seems desirable. Precautions might not be necessary

A crude estimate will be sufficient because much of a feedline''s length runs in
a cluttered, uncertain environment. This program models and analyses the most
simple and worst-case situation - a dipole centre-fed via a coaxial line.

An RF source is placed at the centre of a horizontal dipole of given length and
height. Also from one side of the source a 3rd conductor descends to ground
level where it is grounded via a loss resistor. This 3rd conductor corresponds
to the braid of the coaxial feedline from the antenna back to the transmitter.

The 3 radiation resistances are computed. Then input Z of each of the 3 conduc-
tors followed by the 3 input currents. Finally the percentage of radiated power
contributed by each of the 3 conductors is calculated.

A balanced-to-unbalanced transformer (balun) at the antenna end of the line can
constrain the currents in the conductors to be equal and opposite to each other.
Line radiation is then reduced to a low level and the radiation pattern remains
undistorted. This program does not allow for currents being re-introduced in the
line due to the line not being led away from the antenna at a 90 degree angle.

The need for a balun with a simple dipole is much debated amongst radio
hams.
Attention is focussed on feedline radiation and on a line''s receiving
ability.
But with only anecdotal evidence offered by participants debates inevitably
fail
to arrive at any conclusions.

In the absence of numerical information on the subject this program attempts
to
fill the gap. There is only one quantity of consequence - the fraction of
total
power which is due to unbalanced feedline current. It depends only on
antenna
dimensions and frequency. That radiation emanates from any particular part
of a
structure is a popular misconception but in this case the myth serves a
useful
purpose. The analysis involves some simplifying assumptions justifiable on
the
grounds that the uncertainties introduced are probably no greater than the
un-
certainties associated with details omitted from the input data.

As will be seen, radiation from a coaxial feedline in a particular
installation
can vary widely with frequency. Random resonances occur. If by some chance
one
occurs in an amateur band it can be shifted by changing the feedline length.

Download FEEDPOWR from website below.

# 5341. Estate Auction - Dayton, KY - July 13/14

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-21 02:49:21 UTC
From: Dave Heil <k8mn@earthlink.net>
Message-ID: <3D129420.D1714EB@earthlink.net>
Source record: 40819

Fellas:

I received a telephone call from Dan Owings this afternoon about the auction described below. Looks like some good items. Dayton, Kentucky is just across the river from Cincinnati.

73,

Dave Heil K8MN

Large Two Day
ESTATE AUCTION

SATURDAY, JULY 13, 2002 10 A.M. &
SUNDAY, JULY 14, 2002 1P.M.
Corner of 6th. & Vine Street, Dayton, KY
Selling Saturday
ANTIQUE RADIOS, ADVERTISING MATERIALS, ANTIQUE TELEPHONE EQUIPMENT, CLASSIC TELEVISIONS, METERS, ELECTRONICS, W.W.II RADIO EQUIPMENT, ELECTRON TUBES, SERVICE INVENTORY, AMATEUR
RADIOS DIRECTIONS: From I-71 South take
I-471 to Exit 5, go east on Rt. 8, one mile to sale location.

Previewing from 8 A.M. until sale, beginning at 10 A.M.
Saturday

This very large auction consists of the property of Howard Owings, K4NOS, who operated Owings' Radio & Television for over 50 years in the same location. The entire contents of the store, along with stored inventory, materials untouched for over 60 years, and Mr. Owings' own collected treasures will be offered. Classic radios, televisions, literature, tubes, and advertising materials will be sold along with his amateur equipment. Dozens of classic Bakelite, two tone plastic and other rare radios, along with spare cabinets, original loop antennas, backs, tubes, & knobs are included and one hundred, very collectable transistors radio's, first made in the 1950's. Also selling is a rare 1919 experimental RCA triode tube and other experimental tubes, Mr. Owings' own one tube radio @ 1924, along with classic oak cabinet test equipment, & his @1940 experimental TV.

As a Philco dealer for fifty years, all types of advertising signs & materials, along with displays will be available. Radios from the 1930's thru 1970's, many new in the original boxes; along with new TV's from 1940's thru 1960s's, including 3 Philco Predicta's, one new in the box. New Recordio's, Crosley Fivers, magnetic wire recorder, very collectable 1950's transistor radio's, many Philco's new in the box; microphones: including 1940's studio mikes, 100's phono needles & cartridges,

crystals, and antique light & telephone collection. Service manuals & theory books from 1920's thru 1980's are included. Because of the quantity of the items the sale has been divided into 2 days; with Amateur Equipment, Electronics, Meters, Classic Test Equipment, W.W.II Military Radios, Tubes, Antique Telephone Equipment, TV Parts & Service

Auction handbill page 2
Classic radios including: 2 Crosley Fivers, Crosley 2 in wood cases; Kadette in wood; Automatic in wood; 2 Philco in wood; Philco floor console wood; Bakelite: Zenith; Clarion; Emerson; Motorola; RCA; Arvin very unusual dial; GE; Consoltone; Grundig Majestic; very unusual wood cabinet Grantlan Motel coin operated pillow speaker radio; very rare Philco wood cabinet with Sessions clock @1948; 15 Philco's, new in the original box; Westclox; Lloyds; 6 Westinghouses.
Extra new Bakelite & plastic cabinets, original loop antennas, backs, speaker cloth, tubes, original knobs, new dial faces, glass & plastic crystals(faces). Literature, schematics, and warranty cards on most new sets. Many chassis(s) from floor console and other early radios. Many unusual speakers and intercoms in cabinets. Philco TV's from 1949, 1950, 1951, solid hardwood cabinets, 3 Predicta's, 1 new in box, 1 new, 1used; new Philco portable & beautiful butterfly display, 12 foot Philco background display; Philco transistor locking display cabinet with literature and original radio's. Four Philco "VEEP", the first transistor radio Philco made, with one in the box, and many other Philco's, total of 100 early @1950's American made transistors. Other new Philco TV's, Philco auto radios, Philco test equipment.

Classic custom built Master Test Panel: "JAKE", @1940, continuously updated, very unusual and collectable,(near perfect).
Very unusual TV antennas: contemporary walnut "Jetson design", 2 metal lattice designs, variable dial out length style, and many Bakelite styles. Tungar, @1920's battery charger and RCA @ 1919, experimental triode tube & other experimental tubes, Mr. Owings' own @1924 one tube radio, and his experimental short wave @1940 television. Chrome plated amplifier @ 1940, Thompson amplifiers used for most unusual Public Address Loud Speakers: 24" diameter by 6 foot with dynamic driver, set up for political rallies. Very rare, excellent condition; Mr. Owings turned down offers for these to be used in Hollywood movies. Magnetic wire recorder @1940's, U.S. Navy Boat Clock, Mark I; neon signs; window RCA Tube Clock; RCA Pricing kit for individual items. Antique light bulb collection, 120 volt; radio dial light collection, unusual wheat grain light bulbs and other rare miniature bulb collection. Rare radio studio mikes from the 1930's & 1940's and mike boom and balance stand, said to come from WLW radio, collection of all types of classic microphones. Antique telephone equipment, bells, buzzers, hand sets, and Western Electric beautiful oak switch board, very good condition & very heavy.

Inventory selling on Saturday.
Selling Sunday
Previewing 11 A.M., until sale,

beginning at 1P.M.
Selling Antique Radios, Bakelite cases, radio spare parts, classic TV's: including 3 Predicta's; collectable 1950's Transistor Radios including 1958 Buick "Take Along", advertising signs - materials, neon signs, clocks, and ad displays. Tubes by the thousands, will be sold both days. Watch local papers for further details, or call 859-441-9410 for further information on this large 2 day sale.
Terms on personal property, cash or personal checks with positive I.D.
Sale conducted by Delbert Cox Auctioneers, information 513 - 738-3475

Sale being conducted to settle estates of Howard Owings, Lenore Owings, & Paul Owings; Campbell County Probate Court #02-P-072, #02-P-073, #02-P-074, by Daniel Owings, Executor
(over)

# 5342. Further on Dayton, KY estate auction - July

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-21 02:54:26 UTC

Dan Owings provided a list of the material they have inventoried and catalogued to date. There are three Predicta TVs for auction, one new in the box and another new. Much ham gear is included in the listing. Some of the material to be auctioned is:

Auction list for auction July 13, 14, 2002 Owings Estates (1)list
"JAKE", MASTER TEST PANEL, DESIGNED @1940 CUSTOM BUILT
AND
CONTINUOUSLY UPDATED, VERY UNUSUAL AND NEAT
ADVERTISING MATERIAL, PHILCO 3 FOOT OUTDOOR THERMOMETER
ADVERTISING MATERIALS, ALL TYPES AND MANY DISPLAYS
AMATEUR 80-40 METER C.W. HOME BREW TRANSMITTER CLASSIC
AMATEUR ANTENNAS, VARIOUS
AMATEUR RADIO TRANSMITTERS, 80 - 2 METERS
AMPLIFER, CHROME PLATED, @ 1940
AMPLIFIERS, TRANSISTOR, & TWO TUBE, MANY DIFFERENT TYPES
ANTENNA PORCELAIN & GREEN GLASS FITTINGS
ANTENNA, BIG SWITCH, SINGLE THROW TRIPLE POLE, (neat)
ANTENNA THEORY HANDBOOK, @ 1930's,
(neat) ANTENNA, UNUSUAL WALNUT
CONTEMPORARY TV "JETSON DESIGN"
ANTENNAS, TV VERY UNUSUAL METAL LATTICE DESIGN, 2 STYLES
ANTENNAS, TV UNUSUAL DIAL OUT LENGTH TYPE
ANTIQUE AUTO RADIO FENDER ANTENNAS, & SIDE MOUNTING @1948
ANTIQUE HAND TOOLS
ANTIQUE LIGHT BULB COLLECTION, 120 VOLT
ANTIQUE ONE TUBE RADIO @ 1924
ANTIQUE RADIO ANTENNA COLLECTION & CABINET BACKS
ANTIQUE RADIO'S MANY DIFFERENT MAKES, CABINETS OF:
BAKELITE, COLORED
PLASTIC, & LEATHER
ANTIQUE TELEPHONES & PARTS, BELLS, WESTERN ELECTRIC
ANTIQUE THOMPSON AMPLIFIERS @ 1940
AUTO HEAD LIGHT, CHROME, 1931 PACKARD?
AUTO RADIO'S, PHILCO 1949, MOTOROLA 1940, DELCO, UNIVERSAL, 6 &
12 VOLT, SEVERAL NEW IN THE BOXES
BACK-LIGHTED GLASS DISPLAY SIGN @1948, & MARKING PENCILS
BAKELITE RABBIT EARS, MANY STYLES, PARTS
BATTERY CHARGER, 6 VOLT ANTIQUE TUNGAR @ 1920's (very unusual)
BATTERY, MILITARY 2 VOLT WET CELL
BELLS, ELECTRIC,VARIOUS VOLTAGES, AC & DC OAK BOXES
BOMBER, RADIO ANTENNA MAST WWII, WALNUT & STEEL,
VERY UNUSUAL, B-
25?

BUG, C.W. LIGHTING BUG
BUICK AUTO RADIO "TAKE ALONG" DETACHABLE TRANSISTOR 1958 (neat)
BUZZERS, ELECTRIC, ANTIQUE, VARIOUS VOLTAGES, AC & DC
CAPACITORS, ASSORTED DISPLAY CASES
CAPACITORS, ELECTROLYTIC
CARBON MIKES, & CARBON TRANSMITTER UNITS, & CARBON BUTTON
CB EQUIPMENT, Texas Instrument Home-brew, some new in the boxes, many
types
CHEST MIKE & ASSEMBLY FOR TANK RADIO
CHOKE COILS
CLASSIC BRASS AND OAK CASED TEST EQUIPMENT from @ 1920's - on
CLASSIC BRONZE 10 INCH AMMETER
CLIFFORD LABATORY VACUUM TUBE VOLTMETER, SERIAL #
1 DESIGNED & BUILT
IN CINCINNATI BY Howard Owings
CLOCK, store window display with back light, RCA NAME
CODE OSCILLATOR
COILS, ALL TYPES, ELECTROMAGNETS, INDUCTION
COMODORE 64, 80 METER C.W. KEYED CODE TRANSCEIVER SETUP
COMPUTER BOARDS, WITH TRANSISTORS, IC's, & CHIPS
CONTROLS, VOLUME, & OTHERS
CRT'S, VARIOUS B&W, ALONG WITH 8 INCH TEST SIZES
CRYSTALS, CB FREQUENCYS
CRYSTALS, MILITARY FREQUENCYS
DEGAUSSING COIL 12 INCHES, 120 VOLTS
DIAL CORDS, PULLEYS, & REPAIR KIT
DIAL LIGHT COLLECTION, EVERY TYPE EVER USED
DIODE REPLACEMENT COLLECTION, ALL TYPES
DRILL PRESS, CRAFTMAN 6 FOOT, ï¿½ INCH CHUCK
EIGHT TRACK PLAYER RECORDER
EIGHT TRACK PLAYERS, NEW IN THE BOXES, TRANSISTORS & PARTS
EIGHT TRACK TAPES, THOUSANDS
EIGHT TRACK AUTO PLAYERS
ELECTRONIC COUNTERS
ELECTRONIC KITS, MANY TO BE ASSEMBLED, POLY PACKS
ELECTRONIC TIMERS
ESTATE ARROW CLASSIC ROOM STOVE WITH MICA WINDOWS,
operating on natural gas
EVEREADY BATTERY DISPLAYS, MANY, SMALL TO LARGE
EVEREADY BATTERY TESTERS, MANY, SMALL TO LARGE
EXPERIMENTAL RCA @ 1919 TRIODE TUBE AND OTHER
EXPERIMENTAL
EXPERIMENTAL TV @ 1940, RECEIVING S.W. SIGNAL TRANSMISSIONS
FISH SPOTTER, TRANSISTOR
FORD MODEL "T" IGNITION COIL
GEIGER COUNTERS, 2, ONE NEW IN THE BOX, RECENT DESIGN
GLOBE RECEIVER 160, 80, 40, 20, 11, 10 METERS
GLOBE SCOUT TRANSMITTER
GLOBE SIDEBAND TRANSMITTER
GUAGE, BRASS & RED TRIMMED VACUUM & PRESSURE (2) (beautiful)

GUITAR, TRANSISTOR AMPLIFIER, MASTRO, 6 NEW IN THE BOXES
HALLICRAFTER SX28 RECEIVER & SPEAKER
HALLICRAFTER SX101 RECEIVER
HEATH TEST EQUIPMENT, MANY, EVERY ITEM MADE
HEATH TRANSCEIVERS, TWOERS, SIXERS, TENS, CB'S
HEATH V.F.O., GRID DIP METER, SIGNAL STRENGTH, FREQUENCY
HEATHKITS, VARIOUS STILL IN KIT FORM
HIGH VOLTAGE POWER SUPPLYS
I.F. TRANSFORMER COLECTION, STANDARD & miniature, TV's & RADIOS
IC REPACEMENT COLLECTION, VIRTUALLY ANY, AND ALL, WITH SOCKETS
INDICATOR LIGHT ASSEMBLIES, MILITARY AND OTHERS
(extensive collection)
(neat)
INSTROGRAPH & PAPER TAPE FOR C.W. CODE
INTERCOMS: G.E. PLASTIC RECENT; CLASSIC OLD WOOD CABINETS
JENSEN NEEDLE DISPLAY WITH 2 microscopes FOR VIEWING (neat)
JOHNSON VICKING VALIANT TRANSMITTER
KENWOOD SINGLE SIDE BAND TRANSCEVER, TS180s
KEYS, C.W., MADE BY LIONEL FOR SIGNAL CORPS, IN THE BOX, WWII KNOBS,
MINATURE, PLASTIC CLOCK RADIO, MANY
KNOBS, PLASTIC CONTROL, TUNING, MANY
KNOBS, TV CHANNEL SELECTOR, MANY
KNOBS, WOOD CLASSIC TUNING RADIO
LAMBDA H.D. POWER SUPPLY
LATHE, METAL TURNING WITH 36 INCH BED, TAYLOR
LIGHT BULB COLLECTION, LOW VOLTAGE, ANY TYPE EVER AVAILABLE
LIGHT BULBS, WHEAT GRAIN FOR W.W.II, TYPE METERS
LOCKING HIGH VOLTAGE ANTENNA SWITCH, 2 KEYS MAGNAVOX
FROM W.W. II (neat)
MACHINISTS TOOLS
MAGAZINES; CQ, QST, 73, ARRL, POPULAR ELECTRONICS,
TRADE
PUBLICATIONS
MAGNETIC TAPES, 1 INCH WIDE; REEL TO REEL; IBM, SCOTCH
MAGNETIC VOICE WIRE RECORDER @ 1940's & WIRE
MANUALS, MANY ON ALL TYPES OF ELECTRONICS @ 1930's-1980's
METERS, VIRTUALLY ANY TYPE, SIZE, AND SHAPE, PARTS
MICROPHONES, 1940'S RADIO STUDIO AND STAND AND BOOM,
VERY COLLECTABLE, SAID TO
BE WLW STUDIO MIKE
MICROPHONES, ASTATIC BULLET TYPE
MICROPHONES, CRYSTAL NEW
MICROPHONES, DYNAMIC NEW
MICROPHONES, TRANSMITTER KEYED
MICROSCOPE AND SAMPLE SHAVING KIT
MICROSWITCH COLLECTION
MILITARY CRYSTAL TUNING PACKS, PLUG IN TYPE
MILITARY COMMAND SET MOUNTINGS
MILITARY COMMAND SETS, CONTROLS, TUNING UNITS, TUNING HANDLES
MILITARY DYNAMOTORS

MILITARY ELECTRONIC MEGAPHONE, TWO
MILITARY ELECTRONIC SCOPE SIGHT
MILITARY ELECTRONICS STILL IN HERMETICALLY SEALED PACKAGES??
MILITARY HAND GENERATOR
MILITARY NAVY OSCILLOSCOPE
MILITARY SCOPE TUBES IN WOOD CRATES
MILITARY SERVOS
MILITARY SPEAKERS 16 INCH WEATHERPROFF, ALUMINUM, QUANITY 2
MILITARY TRANSFORMERS VARIOUS VOLTAGES
MILITARY TUBES, 100's, NEW IN BOXES
NAVY, U.S. MARK I, BOAT CLOCK, KEY WOUND
NEON SIGN TRANSFORMERS
NEON SIGNS
OZONE MACHINES, 2 LARGE VERY UNUSUAL PROTOTYPE
PHILCO 12 FOOT BACKGROUND DISPLAY LIGHTED PHILCO
LETTERS ON TOP @ 1960
PHILCO 1949 TV
PHILCO 1950 TV
PHILCO 1950 TV 3 WAY CONSOLE TV
PHILCO DISPLAY BACK LIGHT @ 1950, SET OF TWO, NEAT
PHILCO DISPLAYS, MANY SIGNS
PHILCO FORD DISPLAYS
PHILCO PORTABLE TV DISPLAY WITH MOVING BUTTERFLY
PHILCO PHONOGRAPH NEEDLE 3 LEVEL DISPLAY @ 1950 PLASTIC
PHILCO PREDICTA 1959, NEW
PHILCO PREDICTA 1959, NEW IN THE BOX
PHILCO PREDICTA 1959, USED
PHILCO TRANSISTOR RADIO DISPLAY @ 195 6
PHILCO TRANSISTOR RADIOS, MANY NEW IN THE BOXES
PHILCO TRANSOCEANIC TRANSISTOR S.W. RECEIVER
PHILCO, UPRIGHT CONSOLE RADIO @ 1930's
PHONOGRAPHS, SMALL PORTABLE 3 SPEED, MANY
PHONO CARTRIDGES, CRYSTAL AND DYNAMIC, 100's
PHONO NEEDLES, 100'S
PHONO TONE ARMS, PARTS & COMPLETE REPAIR PARTS
PHONOGRAPH REPLACEMENT DRIVES & turn tables @1948 & OTHERS
PHONOGRAPHS
POWER SUPPLYS, ALL TYPES
PRE-AMPLIFIERS, TRANSISTOR, TUBE TYPE
PROJECTION TV, @1952
PUBLIC ADDRESS SPEAKERS, SET OF TWO, 24 INCH DIAMETER BY 6
FOOT
WITH DRIVERS, VERY UNUSUAL YEAR @ 1948, MOVIE PROPS?
PULLEYS, 5 FROM DELTA QUEEN , 4 MAPLE DOUBLE BLOCKS, 1
STEEL SINGLE FOR 1 INCH
ROPE, FROM GANG PLANK ACQUIRED @1958
QUASAR VIDEO CASSETTE PLAYER-RECORDER, 3, ONE NEW IN THE BOX
QUASAR CASSETTES FOR VIDEO PLAYER-RECORDER ABOVE
RADIO CHASSIS, MANY FROM OLD CONSOLE FLOOR MODELS
RADIOS, CLASSIC COLLECTABLE; INCLUDING: 3 Crosley, 2 Crosley Fivers, 2

with wood cabinets, Kadette with wood cabinet, Automatic with wood cabinet, Zenith, Clarion, Emerson, Westinghouse, Motorola, Lloyds, RCA, Arvin, Westclox, GE, Philco 2 with wood cabinets, Consoltone, Grundig Majestic, Very unusual wood cabinet Grantlan Motel, coin operated pillow speaker radio, along with many new extra Bakelite & plastic cabinets. Your comments about the future unavailability of tubes MAY be true. However, that state of conditions already exists with semiconductors.

I repair a lot of solid state gear. The majority of semiconductors including transistors, I.C.'s, etc. that were ever introduced are now discontinued.

There are many integrated circuits that haven't been available in years. Many types of transistors, especially RF transistors have been discontinued. House numbered I.C.'s are almost impossible to get, except from the O.E.M. If the house numbered types are discontinued, one has to redesign the circuit or scrap the equipment.

Another area of parts problems will be if the custom programmed PROMS go bad that exist in most of todays equipment. Once the original manufacturer stops selling replacement custom PROMS (especially those that have proprietary code), you might as well scrap the equipment.

One example is the 1977 vintage Atlas 350XL transceiver. The original PT-series RF driver transistor is unavailable. It was a CTS type number and CTS is out of the semiconductor business. The RF driver circuit board has to be extensively modified to repair the rig if this transistor goes bad.

Icom, Yaesu, Kenwood, etc don't supply most parts for their rigs once the model has been discontinued for more than 10 years. Many I.C.'s from earlier solid state rigs like Icom IC-701's are no longer available and the rig is unrepairable unless one finds a "junker" or scrap rig.

Motorola recently sold off their RF junction power transistor business. The new owners are busy discontinuing many MRF type numbers.

I suspect that in 10 years it will be easier to repair tube type equipment made from 1925 to 1975 than it will be to repair solid state equipment made from 1975 to 1995.

If a large enough enthusiast market exists, there will be a supply of tubes from one source or another.

Since audio enthusiasts still demand high end vacuum tube amps, audio tubes are still being made and new tube amps are still being produced by esoteric high end manufacturers.

We increasingly live in a disposable society. Equipment being made today is being designed with a life of 10 to 15 years and will oftentimes not be easily repairable after that. Wait until you have to

dispose of your cooking range, refrigerator, etc because a custom
programmed microprocessor is no longer available....

# 5347. FS or trade: WWII BC191-F transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-21 11:51:21 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <ZqEQ8.6$FT2.269344@news.cpqcorp.net>
Source record: 40825

Hello,

I have a BC191-F for sale or swap. It is including the mounting and 80 mtr TU6 (3 - 4.5Mhz) including the VT4C tubes.

Internally there is the original General Electric manufacturer ID tag but the set was overhauled in Italy and has Italian text plates on the front.

The set is in good condition, has been in storage for 30 years I expect and has not been "improved" by anyone. I have no means of testing the set but all is in original condition. I tested the filaments of the VT4C's that are OK and they don't look burned out ore gassy.

Optionally I also have the Chest No27 and RM12 remote control available for the set. This transport box contains the BC191 and the remote control RC12 and when the chest is opened and the lid is locked in position it functions as an operator desk

Asking price US$475 or swap. I'm interested in "modern" (1950 and onwards) British
military manpack sets. Also I'm looking for a MK123 and / or GRC109 installation.

regards,

Nico PA3ESA

Steve,

I'd avoid lossy materials like 77 mix, unless you use a lot of it to make a very high RF resistance..

Also more important is what you are trying to accomplish. You might shunt some static charges if the antenna has no path at all to earth but it will not decrease noise pickup of the antenna ( if that is where you are heading with this idea).

There is a common amateur radio myth that dc grounded antennas or antennas in a closed loop pick up less local noise, but it is NOT true.

Noise is a time-varying field just like a desired signal, and so any choke you install will affect the signals just the same as noise. The sole exception is an occasional pop you might get during incliment weather, if the antenna has no discharge path to ground for accumulated dc voltages.

You could handle that quite well with a very high value resistor. For example, I have 100k 2 watt Ohmite OX series resistors from my dipole center conductors to shields, to prevent them from accumulating a charge when the feedlines are disconnected, and from my insulated towers (used as verticals) to earth because they are fed through series capacitors. The resistors (or even a choke) makes absolutely no difference in noise, but it does prevent an annoying surge or arc when I first connect an antenna and it dischages any built-up charge into my equipment. During bad weather, my tallverticals can charge up the vacuum capcitors in my tuner and make the "spark" on occasion. The 100K resistor totally fixes that problem, and has no effect on normal operation.

73 Tom

I'm interested in "investing" (I think that's the operative word for expensive stuff) in a high-end AM transmitter like the T-368, Navy "URT-type", etc, or maybe a working and complete BC-191/375 (75 meters, at least). I'm located in the mid-Atlantic area (MD) and will be willing to discuss the asking price for any of the above gear. I'm on AM with a few MIL rigs, but I'd like to have a big rig. Thanks. de K3HVG

I guess. I've never seen the actual extender board so I have nothing
to compare it to.

From written descriptions, I think it could be made from a piece of
plywood if you had the connectors. Just run jumper wires from one set
of connectors to the other.

# 5354. Johnson microphone - what is it?

Hello,
I got a Johnson mobile mic (blk, coil cord, RJ-45 connector, PTT switch)
at a hamfest recently. There's a small circuit board in it with a transistor
or FET,
diode connected to the mic itself, 51K and 18 Ohm resistors, and a cap.

What type mic is it? Dynamic?

How to use it with a Drake T4XC?

Many thanks,

Alan, w3dvx@arrl.net

That's very true, I have a few discontinued ICs stored away for some
some of my gear because they simply are not available any more!

DSP processors are likely to be early casualties...

[snip]

>

And guitar amp manufacturers...they're the biggest users of tubes.
Most of the low-power tubes still in production are double triodes
and specialist audio ones like EF86/6267, radio specific ones like
mixers and vari-mu pentodes are long out of production I think.

Dear fellow hams,
One of my co-workers, Shirley Berry, XYL of Jim K7SLI, has asked me to share with you the sad news of Jim's recent and untimely death due to cancer.

I have included the obituary from the Seattle Times newspaper below and also confirmed that their address is good in the callbook if you wish to contact Shirley.

73,
Mike, K7NPN ==========
James E. BERRY Passed away June 11 in Seattle, WA. He was 58. A longtime resident of Portland, OR., Mr. Berry was an avid ham radio operator (K7SLI) and boatanchor collector. He is survived by his wife of 21 years, Shirley Berry of Bothell, WA. daughter Tracie Schroeder of Portland, OR., son William J. Schroeder of Chandler, AZ., brothers Roger Norman and John Berry, both of Portland, OR., and three grandchildren. In lieu of flowers, memorials to the National Hemophilia Foundation, 116 W. 32nd St., 11th floor. New York. NY. 10001. Arrangements entrusted to Purdy & Walters at Floral Hills, Lynnwood, WA.

# 5364. FA: HQ-170, very clean

Newsgroup: rec.radio.amateur.boatanchors

Source record: 40842

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1360438042

This receiver has been completely refurbished. The cabinet was stripped &
painted, the panel stripped, painted, & silk-screened. Electrical work done
as req'd, there's an added filament transformer to keep the 1st conversion
oscillator filament on all the time, and a SS rectifier, similar to the
"170-A" model.

ends tonite (Sat.)

tnx for looking,
Al, W8UT

I beleive a number of the earlier DSP's are already obsoleted, and a
pain to track down the few remaining spares.

# 5367. WTB NC183D replacement XFRMR

Newsgroup: rec.radio.amateur.boatanchors

Source record: 40845

Greetings, Beautiful NC183D lost power transformer and needs a replacement. Anyone
have one? Prefer after market unit and not original as they are weak through the entire
series of National receivers. As a matter of fact now that I think of it I would also like to
have one for the HRO50T1. I have two of these receivers and both are fine but a backup
transformer would interest me. Thanks, Mike K0AZ

Is that the table top, or rack mount version? I wasn't the one
asking, but I need them for the 183R rack mount version.

# 5373. Anybody got a Galaxy RV1 VFO?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-22 21:14:15 UTC
From: "Bill :-)" <TheRealExray@netscape.net>
Message-ID: <3D14E8A7.33F06139@netscape.net>
Source record: 40851

I'm still struggling with trying to match up the RV1 with my Galaxy 5 Mark II. Problem is that it ripples the signal when in Standby mode. All other modes seem to be fine.
The RV-1 manual has some details on converting the VFO for use with a Mark II but its a pictorial description like move the brown wire to lug 10 on the switch. A previous owner of mine replaced the switch and all the interconnecting cables so there's no way I can relate Galaxy's info with what I have. I suspect the clue is hidden within Galaxy's recommendation.
I need to find someone with an unmodified VFO to compare notes with, or heck, I'd be willing to buy another VFO since I have a couple more of the xcvrs here.
Any help would be appreciated,
Bill - WX4A/KP4

# 5374. Wanted: Collins 32S-3 information

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-22 21:32:55 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <uh9r8gk3gvla6a@corp.supernews.com>
Source record: 40852

Help: getting my 32S-3 ready for sale and I found a problem with the balanced mixer. The carrier can be nulled out but the adjustments seem to drift and the carrier level increases to un-acceptable levels, USB or LSB. My book is a reprint and does not match the mixer circuitry in my transmitter. Shucks.

For the heck of it, the mixer diodes in my TX were discrete glass things so I tried replacing them with HP hot carrier types. The carrier nulls better (almost perfectly!) with the HP diodes, but still drifts up in level. Anyone have a proper schematic for 32S-3 serial numbers in the 11600 range they could have a look at and maybe scan the mixer portion of the drawing?
Thanks
Bob

Hello to the group:
I was wondering if anyone has the restringing diagram for the
TenTec Model 243 Remote VFO. This goes with their Omni Series
Transceivers. I have one I received from my fatherinlaw and the cord is
broken. It is all there but he removed it for some reason, put it in an
emvelope and never redid it. I know Ten Tec has one they sell? with the
restringing kit, but I have everything now and just have to redo it all.

Tks 73, Jack N9JB

From: ehsjr@bellatlantic.net
Message-ID: <3D15FC4E.9BCDEFD3@bellatlantic.net>
Source record: 40867

I picked up a Heathkit wattmeter model HM-102
at a hamfest. The meter itself is bad - the coil
is open. My choices are: 1) to replace it with
a the correct Heath meter, or 2) replace the movement
and use the face plate from the defective meter,
or 3) to use some other meter and make a new faceplate.

That said, can anyone give me some pointers?
Heath parts availability? How to determine
the full scale current of the original movement?
Where to get a replacement that I can use with
the original faceplate? Other ideas?

Thanks!

Bruce K6RQR

# 5397. FS: Collins S-Line Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-23 19:37:18 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3D1622F4.128A87DF@teleport.com>
Source record: 40875
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: WE Collins S-Line Station, picked up as part of a trade from a local ham. He used this station until about 7-8 years ago. I've fired up the receiver and it seems to hear fine. The station package consists of a 75S-1 receiver with noise blanker, a 32S-1 transmitter with a Shure 444-type base station type microphone wired for the transmitter, and a 516F-2 Power Supply in the cabinet (no speaker). Includes original manuals for the receiver and transmitter, and the interconnecting cables and receiver AC cord. $975 for all plus shipping from Oregon.

# 5398. Need 32S-3 help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-23 19:52:38 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <uhc9ok6tndt467@corp.supernews.com>
Source record: 40876

Help: my 32S-3 has a problem with the balanced modulator. The carrier can be nulled out but the adjustments seem to drift and the carrier level increases to un-acceptable levels, USB or LSB.
My book is a reprint and does not match the mixer circuitry in my transmitter. Shucks. Seems there were several flavors of the circuitry around the balanced modulator.

For the heck of it, the mixer diodes in my TX were discrete glass things so I tried replacing them with HP hot carrier types. The carrier nulls better (almost perfectly!) with the HP diodes, but still drifts up in level.
Anyone have a proper schematic for 32S-3 serial numbers in the 11600 range they could have a look at and maybe scan the mixer portion of the drawing?
Thanks
Bob

Source record: 40877

Bob:

I have a manual with a date inside the front cover of 1 June 1964 and "3rd Edition, 15 September 1964"
on the title page. I don't know what that equates to in production serial numbers, but if you think it is more current than the one you have, let me know.

Some early KWM2 and possibly 32S- series transmitters had only 2 diodes in the balanced modulator. A service bulletin was later issued to add 2 more diodes to make the now standard diode ring. I suspect all the 32S-3 transmitters were manufactured with 4 diodes, but if you only have two, that may explain the different circuitry you mentioned.

If the balance doesn't hold, I would check R-14 for poor wiper contact and also the grounds on C11 and C12, if not those caps themselves. Also check or replace C 139. All the other components (R 102 and R130, L32, C187A&B) are also suspects.

Good luck,

Roger K6XQ

Turns out it was a leaky C9 coupling cap from the audio stage cathode. Works great now!
Thanks
Bob

I've got an extender board for a Heathkit HR-1680 receiver.
I'm not sure if the boards are made the same way as the SB104 boards, but if
you like I will make a foto of it and mail it to you.

Mike:

I don't know about the NC-183D but it's brother, the HRO-60, has a 0.1 uf paper capacitor from one side of the power transformer high-voltage secondary to ground. When it shorts, the power tranny is gone before the fuse can blow. Remove this capacitor before installing a new transformer. I don't know who the moron was that put that capacitor in that location, but he is responsible for many blown power transformers.

Best Regards,

Ed
Canyon Lake, TX

# 5404. FS: Yaesu FT-101E, Beautiful condtion

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-23 22:52:16 UTC
From: maritimus49@aol.com
Message-ID: <20020623185216.00786.00000536@mb-mc.aol.com>
Source record: 40882

I have for sale the Yaesu FT-101E (SSB/CW/AM) 160-10 meter transceiver. I won't be able to get on the air at this location. It is working and in beautiful condition cosmetically. The cabinet is excellent and the front panel is perfect, like new. I am asking $150 plus shipping (its about 30 lbs). Thanks.

73,
Bruce K6RQR

# 5405. FS : Collectors condition Drake "C" Line

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-24 00:20:57 UTC

Source record: 40772

Guys,
First of all, I hope you won't ground me out for not having a ticket.
I have come into possession of the same Hammarlund SP600 for a second time, and the intervening ten years have not been good to it. It was stored against a humid basement wall for at least part of the time with predictable results.
Two questions: Has anyone done any restoration on tuning dial disks... these are slightly embossed, I think. And if so, how?
Second: The original manual has disappeared. What's the best source for operation/alignment/ circuit info? I've found the odd CD site among others, but am wary of getting illegible photocopies for the money.
Standing by,
Nelson

Not a bad idea. My email is hhresco at attglobal.net

I'm pulling together a Heathkit website and I'll put up the .jpg so
people can see what the extender board issue is.

## 5415. FS-R390A

From estate, Stewart Warner manufactured, no top or bottom covers.
Looks fantastic, has meters. Doesn't appear to have ever been rack
mounted. Untested except for receiving local BC stations, I put my
finger on the antenna connector and the stations boomed in. That is the
extent of testing I have done. All controls turn smoothly and freely.
Sold as is but guaranteed not DOA. Beautiful front panel and knobs.
$400 firm plus all shipping costs from zip 65301. Email direct if
interested, remove the NO SPAM from my address.

Must have one heck of a battery pack! Also must have one of those new "fractel batteries" and a "fractel antenna" to handle the power! <<grin>>

Hate to have THAT unit by my ear while transmitting.

(misspelling intentional....)

I have a Yaesu FT-101ZD MKII with original manual in excellent condition. It covers 10 to 160 meters including the WARC bands. This is the version that has the AM mode. I have the original inner and outer box and I would rate this a 9.5 out of a 10 for condition. There is no scratches, dents or marks etc. Also there is no optional CW filter and no microphone. It has full output and would make a good starter rig or back up etc. Also its from a non-smoker and all you need is an antenna and know how to tune a radio and your ready to get on the air. It has (2) 6146's for finals and a 12BY7A for a driver and its digital readout. I will ship it for $350 in the 48 states only. If you have any questions email or call (508) 821-2993
WZ1U Steve / Lakeville, Ma.

I have in excellent condition a Yaesu FV-101Z VFO. This is a beauty to add to your station and hard to find one in this condition. Its from a non-smoker and there is no marks, scratches dents etc. I could call it mint, but it has been taken out of the box. It comes with the original inner and outer box, original manual and cable. Its in 100% operating condition and will take $125 plus shipping. I can be reached at (508) 821-2993 or email......WZ1U Steve / Lakeville, Ma.

# 5425. FS: Lincoln 6-Meter Transceiver, A Nice Classic!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-24 20:16:14 UTC
From: Bill Golden <shortwave@pghmail.com>
Message-ID: <3d177dc4@news.pghmail.com>
Source record: 40753
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

A beautiful classic from 1961, a Lincoln 6-Meter AM transceiver.
This rig, slighly larger than a shoebox, was sold in 1961 by Allied
Radio in Chicago. It was at that time considered a "step-up" from
the Heath Sixer (Lunchbox) rig, and this one's a real beauty!

Crystal controlled (front panel crystal socket), the rig's transmitter
is plate modulated, with a power input of 7 watts. The receiver is
a sensitive superhet with built-in AVC and noise limiter. Preceding
the receiver's detector is an RF stage for added sensitivity and
selectrivity, keeping RF radiation to a minimum. Covers the entire
6 meter band from 50.1 Mhz to 54 Mhz. Built-in A/C power supply,
or can be operated using an external 12 VDC supply (not included).

Here's your chance to own a "60's boatanchor" that's a rare classic;
this one's in absolutely beautiful condition throughout. Complete with
manual containing full operating info and schematic.

Just add a crystal and a mike, and you're ready to join in the 6 meter
AM fun with this genuinely sharp-looking little rig. Price is $75 plus
$17 for very well-packed insured shipping (USA only).

If interested, please reply via E-mail for further information.

73,

Bill

I have an old Galaxy 5 that uses 6HF5s and it is no problem at all to find them quite inexpensively. I don't think its as hefty a tube as the 6KD6 but it might be worth looking to see if they could be made work in the FTDX401. With a pair of marginal ones in the Galaxy I have no problem with 100+ watts out. A fresh set gives me upwards of 180 or so. I don't have all the tube data handy but what I briefly looked at places the 6HF5 running with 500 vdc on the plate and the 6KD6 at 800. In the Galaxy they run the HF5s at around 800.

Take the meter apart and very carefully, with a small soldering
iron, heat and add a very small amount of solder to the in and out
meter coil termials. Usually the break is at the terminal. I have
repaired many meters this way. Good luck! WA8OIK Fitz

Yes. Basic stuff: (Assuming you really mean TS-1379/U - because the specs. are very different for the TS-1379A/U

2-40Mhz on 4 bands; +/- 1% 50 Ohms input

> I'd like to
> see a photo of it or find out the frequency rage covered.

I don't think I have a picture - at least not handy - but the above specs are out of the US Navy's EIMB, Test Equip. Spec. Book, w/change 12 of 12/1971...

HTHs

>This rig, slighly larger than a shoebox, was sold in 1961 by Allied
>Radio in Chicago. It was at that time considered a "step-up" from
>the Heath Sixer (Lunchbox) rig, and this one's a real beauty!

I owned one of these briefly a few years ago. Just long enough to talk about it on this NG and learn about its history. I lived in Chicago then, home of Allied, and apparently when 6M AM was big, "everybody" in Chicago area had a Lincoln.
(This was late 60s, I was in Boston and then Pittsburgh, and used a Knight-Kit 6M rig, also by Allied, quite a bit bigger and heavier).

Not a lovely rig, but easy to operate, and yes definitely way above the Heathkit lunch box.

>Just add a crystal and a mike, and you're ready to join in the 6 meter
>AM fun with this genuinely sharp-looking little rig.

Is there still any "AM fun" on 6m anywhere? Is 6m still in use anywhere? It was pretty dead in Chicago area by late 70s. Pretty well killed off first by SSB prcing the band out of reach of many, and then 2m repeaters put the coffin nails in. Is 6m making a comeback?

From: Larry Johnson <larryj@teleport.com>
Message-ID: <3D180720.5713315B@teleport.com>
Source record: 40781

Just this weekend, I picked up a very nice, clean Heath SB-220
Amplifier. I recently ran into a web site that offered replacement
Potentiometers for the Relative Power "Sensitivity" front-panel control
for the SB-200/220/221, etc. series amps, and this replacement one had a
pull-on/off switch, which could be wired up in series with the transmit
keying line to use as a Standby/Operate switch.

Anyone know who the dealer is or the web site address? I can't seem to
find it, I didn't need it at the time since I didn't have an SB-220.

Thanks,

Larry K7LJ

I restored a Hallicrafters 6m AM rig a couple of years ago and in six months was unable to make a single AM contact except by pre-arrangement. There is supposedly a club that operates a net out of Normal, Illinois but I could never hear them, (on a J-pole) or they are defunct. I am told there is AM activity in New York and Los Angeles, but elsewhere I haven't heard.

As an aside, I did reasonably well on Field Day working 6m SSB. The band was open (from Chicago) to the West (Texas) and the South (Florida) intermittently throughout Saturday night. I don't regularly work 6m, but I gather SSB is pretty active.

The most basic things to check:

1. Does the 820 in fact have the driver and final tubes installed?
2. Make sure that the filement switch on the front panel is turned on.

Message-ID: <afai6t$jlc$7@venus.btinternet.com>
Source record: 40790

New program PADMATCH.exe

For given source and load resistances this program designs T, Pi and L resistive matching pads and attenuators. It has the same facilities as program MatchPad (which it replaces) but with an extra facility to insert preferred-value resistors from the various standard tolerance ranges. The design procedure is used in reverse to predict the in-circuit attenuation (dB).

First calculate the ideal resistor values of a network. Then replace them one-by-one with the nearest preferred values and the changed attenuation will be automatically calculated.

Download program PADMATCH from website below.

Source record: 40791

I have for sale in excellent condition a Dentron GLA-1000B amplifier. It covers 80 to 10 meters and I have the 10 meter mod to get on 10 meters which has not been done. This amplifier is rated for 800W CW and 1200 Watts ( PEP SSB ). The final tubes are (4) 6LQ6 and produce about 550 watts out. I would rated this a 9 out of 10 and is in excellent working condition. I do have the original box and original manual. I will take $350 plus shipping in the 48 states only. If you have any questions email or call (508) 821-2993....WZ1U Steve / Lakeville, Ma.

# 5465. FS: Dentron GLT-1000 antenna tuner

Source record: 40792

I have for sale a Dentron GLT-1000 antenna tuner which handles and matches the Dentron GLA-1000B series. It has a directional wattmeter, 4:1 balun, switching is provided for 5 seperate loads and a seperate bypass switch. The circuitry used in the GLT-1000 is a "T" network, consisting of an input and output series air variable capacitor and a tapped toridal inductor, using a double thickness T-225B core. It covers 1.8 to 30Mhz range and its rated for 1200 P.E.P input to the final state. I would rate it a 9.5 out of 10 and its in excellent condition with the original manual and the original box. There is no marks, scratches, dents and its from a non-smoker. This particular tuner is getting hard to find and I will sell it for $150 plus shipping in the 48 states only. If you have any questions, you can email or call (508) 821-2993.....WZ1U Steve / Lakeville, Mass.

Bendix aviation receivers were produced since the late
1930's. The original model Bendix RA1 was said to be
installed in Amelia Earhart's Lockheed shortly before
she was lost in the Pacific.
Later Models like the RA1-B were common on commercial
Airline Aircraft in the US and Canada in the early 40's
and in some military aircraft.
They were an extremely well built, rugged set and still
a few around in museums etc.

I have a BENDIX RA1-B obtained from an Airline that I worked
for and it is still in "working" condition.

Hi all...

I'm trying to find the original radios and antenna
for my airplane (an Aeronca L3B "Grasshopper")...

The specific equipment I need is:

RCA AVT-112 Transmitter
RCA AVR-20 Receiver
RCA AVA-120 Trailing wire antenna

The equipment in question might not have actually been manufactured
by RCA... I know that at least some of them were manufactured
by Continental Radio & Television Corp...

Any help would be appreciated

I could also use some help on this one... a friend of mine had one on loan. The last night he had it, as he was tuning up on 75 meters, he said he heard a 'buzzing' inside the radio. He promptly took it out of send mode, and when the noise didn't stop, he turned the power off. As he did that, there was a puff of smoke (yikes!!). No popping, or anything else. Needless to say, this is a bad thing. Any ideas?

Here are a few places to check. Keith, G0VRS has a good page on the radio
and may be able to help with a manual copy.

http://www.g0vrs.mcmail.com/ar88.htm

If you want to pa for a manual, try the following - he got me a manual on an
88D

http://www.testequipmentcanada.com/r.html

Also
http://www.radioera.com/r-manuals.htm
Very good collection of boatanchor manuals. His web page list both the op
and service manuals as available.

# 5487. SX28A Help Please

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-26 21:22:34 UTC
From: Simon Robinson <simon@NOJUNKMAILnomis.co.uk>
Message-ID: <3d1a309d@runswick.octacon.co.uk>
Source record: 40716

I have an SX28A which has developed an odd fault. Can anyone help please.

It works perfectly on all ranges except when you tune above 21MHz it rustles like a scraping tuning gang. It's definitely instability in the second RF amplifier and for the life of me I can't find it. Checked for dry joints, checked the caps, swapped the valves etc - no success. The rustling noise is audible on an adjacent set. If you pull out the mixer or 1st RF the noise remains however with the second RF out it goes away and signals can be heard by connecting an aerial to the mixer.

Any advice would be greatly appreciated.

Many thanks

Simon M5POO

How did you check the caps? Try temporarily soldering another cap in
parallel with each in turn.

Of course that advise only works for locating open caps. Nowadays the
problem tends to be leakage and voltage breakdown due to aging which
would still exist as long as the old cap remains in the circuit.

This is the second of two (2) of these I found on the shelf in an old electronics supply house. This one was, in fact, still sealed in the unopened box, but some fool scrawled "transistor checker" on one side, so I had to open it to make sure what was inside -- what a Catch-22!

This transistorized Jackson Electrical Instruments Company Model 562 Code Oscillator and Monitor apparently dates back to the early '60's (before zip codes).

Thanks for looking,
Tom

Henerally, yes, but an old trick to maybe boost the performance a little is to
fedd the given 28V to the filaments, but run a little bit more on the plates,
maybe 35 to 40V.

If you don't have the soldi-state replacement adapter for the audio output
tube, but the original audio tube, you can even save a lot of $$$ and weight on
your power supply by running 28 VAC into the filaments, and using pure DC only
for the plates.

Very nice performing radio, and not quite so ugly after a while :-)

From: Francesco Messineo <frank@ares.ccii.unipi.it>
Message-ID: <afelk8$147$1@serra.unipi.it>
Source record: 40729

Hello all,
I don't know if this is the right group, but since the FT-102 has tubes
in it, I believe I'm not too OT here :-)
I acquired a second hand FT-102 rig, it was modified to go in the 6.5-7.0 MHz
band and to the 11 meters band :(
I'd like to have copies of the part of the FT-102 technical supplement
that describes these modifications in order to revert the mods and bring
back the rig on its original bands, I already have manuals and schematics.
The modifications should be describe in pages 17 to 26 of the technical
supplement.

Thank you in advance and best regards.

True, but I assumed that he would have done voltage checks which should
pick up shorted/leaky caps in many places.

As the subjet line sez I am looking for a TenTec Triton I or II for parts. Must have a good front panel and top cover with no extra holes. An 8 pole filter is a plus. PA can be dead, knobs missing, side panels missing, VFO in need of a rebuild, you get the idea. Can be hacked, but not trashed.

Thanks,
Randy KB8ASO

# 5509. FS: NOS US made octal sockets

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-27 20:28:06 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <20020627162806.20873.00000798@mb-da.aol.com>
Source record: 40737

I have “vintage” US made octal tube sockets that I need to sell. They are "type S" mount with snap ring (see Antique Electronic Supply #P-ST8-311 and #P-ST8-318 at $3.95 each).

Amphenol - black
Cinch - brown

Pictures available at;
http://members.aol.com/ecc81/yardsale

$2.00 each (minimum of 10, assorted OK, please).

I have over 500 of each type, and I want to sell them ALL immediately. Offers encouraged for large quantities, or the entire lot.

I also have optional mounting saddles for $1.00 each. I have less than 500 of these, so mounting saddles will only be sold with sockets, and are not available separately.

Please respond BY EMAIL (do not post) to < OvrReactor@aol.com > if interested.

Thanks,
Tom Mitchell

From: thompson@mindspring.com
Message-ID: <affv6j$78d$1@nntp9.atl.mindspring.net>
Source record: 40739

I signed up for the KW Electronics group on Yahoo and have a valid ID and password. I have never been able to do anything as it keeps asking for a verification code which I never got. When I try to ask to have it re-sent it keep asking for alternate e-mail address ????? All I get is ring around the rosy!

I have tried several times and am giving up Yahoo is just to complicated. Can this be moved somewhere else?????

FS: Parts for FT101

Knob set, no VFO knob, Very good shape $15

Power Transformer- works and tested, $40

FM filter, Yes FM, want ultrawide receive? It is about 12KHZ wide- Sounds great when the band is quiet and you can have a nice 10 meter AM QSO. $60

S-meter, Great shape, works, tested. $20

Fan, tetsted, works fine $20

Complete cabinet, not perfect, but usable. New coat of paint would make it look new. $25

Plug in modules- all working $39 each.

All prices DO NOT include shipping.

Thanks!

Well, your posting to that group has come through to me so you must have
done something right!!
Sorry to say that I can't solve your problem as I've had no problems with my
2000A which is the same circuit.
The only thing I can say is that when they supplied a new Kokusai filter, a
data sheet and a pair of crystals came with it.

Larry -

Not aware of the web site that you are referring to.

You might want to ask Jeff Weinberg, W8CQ at Harbach Electronics.
He is aware of HeathKit SB-220 and SB-200 resources
http://www.harbachelectronics.com/

Hi - I did see a site a few weeks ago, and thought, "Where was this
dealer when _I_ had an SB-220? I'd like to have put one of these
pot/switch assy's in my unit when I had it." Now I can't find it again.
It's not Harbach, though. I emailed him just in case he knew, though.
Now I have another SB-220 that needs one (and a friend has an SB-200).

Source record: 40646

Hi,
Anyone experience a problem with extremely low output with the Omni D?
Starts out with about 13 watts on 160M and 1 or less on 20m, with nothing
beyond there. All the voltages check with the manual. Any suggestions will
be readily accepted.
Thanks for any responses.

Source record: 40660

I have four used 4-1000A tubes pulled from a working transmitter in 1990. Two have less than 8k hours and the other two are about 12k hours, Emission good out of all four. Nominal darkening of the envelope due to electron bombardment.

Shipping will run at least $20+ per tube, as I will double box and insure.

I have been offered $100 per tube by a reseller, and am entertaining offers for one or more tubes. I'd like to get these to someone who can use them for their california KW -- if you are within a reasonable distance of Kansas City, I can drive and deliver instead.

Look at the NC Total Electronics paint selection

Mike Shelton has a number of paint colors

http://www.nctotalelectronics.com/

HALLICRAFTERS PAINTS
#301(*) Do not touch up. Paint entire top of panel. Due to age, quality
control and silver paints previously used.
#302 HT Gray (*) This is the lighter gray. Some HT-32&'S, 37'S have a darker
gray. While ours is the correct gray, it may not match your particular
model.
Hallicrafters had quite a variation of this gray over the years. As compared
from
the field, we took the best of the best and matched it. Ours matches the
majority.

Another approach is to remove the Heathkit logo. Ream out one of the holes slightly, attach a small diameter toggle switch and put it in series with the relay. When ready to sell the amp, demod the amp, put the logo back on, and it looks like original.

If you take the top to the local Home Depot
they may be able to scan the color and mix you
a can of near-matching paint. They have a new
machine that scans the color of an original
then computes what mix of pigments to use
to duplicate the same. One other caution, it is
very possible that the paint used on your
Hallicrafters is lead based. You may want to
take precautions if you were to remove the
old paint from breathing in the dust etc...

Ends 1823 Zulu - 11:23 A.M. PDT - Saturday

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1361880243

From an estate, this Multi-Elmac transmitter was apparently partially
disassembled with the intention of restoring it.

The face plate and front panel is quite good, it appears to have fresh
hammertone paint.

Thanks for looking,
Tom

# 5544. Re: Heath SB-220 Standby Switch Info Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-29 15:34:57 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3D1DC845.ED67A655@teleport.com>
Source record: 40672

When using previous SB-220's and similar amps, I've rigged up outboard switches, considered the mini toggle switch, etc. But I did just recently see on someone's web site the offer of a 100K ohm replacement Sensitivity Control with a push/pull on/off switch specifically for SB-200/SB-220, etc. type amplifiers to use as a Standby/Operate switch. This way, no front-panel changes had to made at all. And the seller was specifically marketing this replacement pot/switch combo as such for this particular use. Unfortunately, when I saw the ad, I knew I'd probably never have another SB-220 or similar amp, since I now have an Alpha 87A. So I never bothered to bookmark the site, knowing I could probably do a search and turn it up again, if I ever needed it. One of those frustrating things!

Thanks for the suggestion,
LJ

# 5547. Tube type power supply trainer unit f/s

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-29 21:36:22 UTC
From: WKW <worley@snowhill.com>
Message-ID: <3D1E2911.34CBF8AF@snowhill.com>
Source record: 40674

I have several old Army surplus custom made tube- type training power supplies. These contain several useful parts ( including the case ) for making a 50 or 100 W RF amp or transmitter out of. Total size is 19" W x 15" D (counting the 3" handles on the front) and 8" H. The front has two nice large 4" x 4-1/2" rectangular Simpson panel meters, a 500 V and a 300 mA. Also has a 3-pos rotary sw and 3 pots, all with nice black knobs, and a fuse holder & rocker power switch. Inside is a big plate/filament transformer with the following spec: Stancor P-8352 with the following ratings: Pri 117 VAC, SEC: 290-0-290 (580 VCT) @ 240 mA DC, 5 V @ 3 A and 12.6 VCT @ 5.25 A. There are 4 tubes in the unit: 5V3 Full Wave rect, 6AS7G large octal power reg, 6136 mini 7-pin and a 5651 87V gas VR tube. Also has a 20 uF / 500 V dual section twist lock capacitor, and some power resistors and other parts. There is no top or bottom cover, but I can supply a piece of 1/16" aluminum to fit. I traced one of the units out before and can supply a schematic (just never got around to drawing a good on out). Asking $30 plus UPS (36330 zip, total wt appr 28 lbs). Also have units missing tubes or other parts which I will knock $5 or $10 off. I can email you two photos. Email or call 334-347-5281 day/eve.

My S-38C doesn't seem to be picking any stations up. That is, the speaker works, I get a hum when I tune, but where it should be picking up stations there's nothing. Even local AM stations that should be coming through loud and clear aren't picked up. All the tubes are OK.

I don't know a lot about old radio circuits (yet :) ), but I suspect that one of the capacitors is blown. Short of replacing everything, can anyone suggest a part(s) that I might want to check?

Thanks in advance,

Matt

From the picture it appears that someone has done a shoddy job of spray painting the cabinet- severly reducing the radio's value.

Matt -

If you are unfamiliar with the repair of older tube (now antique) receivers or replacement of parts, ask the advice of your local restorers or professional radio shop.

Ground Up Restoration (a great primer)
http://antiqueradio.org/groundup.htm

Hallicrafters S-38C.0.54-32MHz AM/CW 6-tube short-wave receiver. 1946.
A nice set with fine selectivity, excellent band spread, and great audio. Usually a good performer in AM DXing as well. A nice, inexpensive vintage set.

Stan Watkins has a good web page, with photographs on his restoration of the S-38 receiver.
http://www.concentric.net/~Stwradio/hals38.htm#Hallicrafters%20S-38%20Restoration

Phil Nelson also has some notes on restoring the S-38 receiver.
http://antiqueradio.org/halli08.htm

Electrolytic capacitors (and paper capacitors) can dry out as they age (hey this receiver is easily over 40 years old). The audio hum you hear indicates you may have this specific problem. Here are some links for replacing antique radio capacitors:
http://www.ezlink.com/~crash/parks/caps.html
http://antiqueradio.org/recap.htm

NOTE: This receiver has rubber isolators that keeps line voltage (110 VAC) off the metal cabinet. There are four isolators, one on each corner. These MUST be replaced properly, if the radio is going to be operated SAFELY, without an isolation transformer. [See Stan Watkins web page for photographs]

If I was restoring this receiver, I would get a schematic and replace the electrolytic and paper capacitors.
Available at: http://bama.sbc.edu/hallicra.htm

Greg
w9gb

PS Discussion of this receiver is quite frequent on boatanchors, check archives for the December 2001 discussions.

There was a real junky example of the same model on ebay just a couple months ago. I wonder if its the same one wearing a new dress?
Reversing a spray can job on a cabinet like that is a pretty simple procedure. I'd opine that the radio's value has only been reduced by the cost of a new can of spray paint.

I hate to tell you this, but you should replace everything, or at least
every capacitor. If you are going to use it regularly you don't want to
dig through the underside with a multimeter to discern which cap blew
this time.

Ditto. There's only about 6 or 8 wax caps in the set and it would be advisable to replace them all in one fell swoop unless you want a forever fixit project. The S-38 series are somewhat easy and decent little sets to fix up and listen to. No real challenges other than the cheapo BFO scheme.

Along with the advice from other responders, I would mention that
switches can get dirty and make the set not work. RatShack sells
contact cleaner for this sort of thing.

A hard to read diagram is at:
http://ww3.nostalgiaair.org/schematics/HAL/_HAL_15-59.gif
It's really just an enhanced "All American 5ive" radio.

>> Along with the advice from other responders, I would mention that switches can get dirty and make the set not work. RatShack sells contact cleaner for this sort of thing. <<

The S-38C has a "Speaker/Phones" switch, and a "Receive/Stand By" switch. If either of these two switches is set to the wrong position, or the switch and/or its associated wiring is faulty, then you will get no audio.

Also, the S-38C should be sensitive enough to pick up local AM stations even with no antenna (or ground) connected. And I mean *no* antenna -- not even a typical AM loop or ferrite bar antenna that most other radios have built-in.

For casual shortwave listening, any member of the Hallicrafters S-38 series makes a very satisfying radio to use, with its excellent sound quality, powerful audio output, and surprisingly good reception for such a simple design. I have a S-38C myself and the two things that really set it apart from modern shortwave receivers is that it has a very low level of background noise, allowing even very weak signals to be received without annoying background hiss, and it does not have the typical tuning distortion that modern ceramic-filter-based receivers have.

By this I mean when you are tuning across stations on the dial and are not tuned into the "center" of a signal, the sound will not be distorted. On a crowded band, the signals smoothly blend into each other, but it still has good enough selectivity to pick up stations 5 kHz apart from each other.

I have two shortwave "band-scan" recordings made from my S-38C, and I think they give a very good example of its reception and audio quality. When I get these files uploaded in MP3 format, they will be available in this web directory:

How do you know all the tubes are OK? Have you tried substituting each one with known good ones? I suppose it wouldn't hurt to change all the paper/wax capacitors but you may still have the same problem after doing so, if you haven't done some diagnostics first. Do you have the schematic for making voltage and resistance measurements? If not, try to find someone with vacuum tube experience.

This is the second of two (2) of these I found on the shelf in an old electronics supply house. This one was, in fact, still sealed in the unopened box, but some fool scrawled "transistor checker" on one side, so I had to open it to make sure what was inside -- what a Catch-22!

This transistorized Jackson Electrical Instruments Company Model 562 Code Oscillator and Monitor apparently dates back to the early '60's (before zip codes).

Thanks for looking,
Tom

# 5576. FS: Collins 32S-3 transmitter & 516F-2 power supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-06-30 13:02:46 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <uhu0bt3qiqp967@corp.supernews.com>
Source record: 40554

For sale, DETROIT MICH. AREA LOCAL PICKUP ONLY, a very nice, un-modified, un-restored and working Collins 32S-3 transmitter and 516F-2 power supply. Serial numbers 116xx and 103xx respectively. There are many high resolution pictures at: http://ftp.bay-town.com/~p15218/EBAY/32S-3/
The pictures are about everything I could think to photograph including close-ups of it's nicks and scrapes. CCA grading would be between Very Good and Excellent in my humble opinion.
http://www.collinsradio.org/html/cca_grading.html
Not quite an excellent because of "there will be signs of wear and tear and the front panel may be minimally scratched. " I've had this rig several years and I am selling it to reduce my collection of stuff prior to a move.

I recently used it for several SSB QSOs on 40 and 20 and 15m and did find a couple of problems that are now fixed.
1) Coupling cap C9 was leaky, replaced with a tantalum type.
2) I replaced the old modulator diodes with HP microwave Schottky types. Excellent+ carrier suppression now.

I also went through the complete alignment with no issues of any adjustments being at their extremes. The transmitter has two NOS Amperex final tubes, properly neutralized, of course! Makes > 100 Watts from 80-15 meters, 90 Watts on 10 meters. The power supply has what appears to be all of it's original filter capacitors and they are working just fine. It has a super duty, military type 5R4 installed. Included is a professional copy of the manual I recently purchased on ebay. I have the original manual somewhere but can't find it. If it ever turns up, I'll ship to the buyer. For the rig and power supply I would like to get $700. If this LOCAL PICKUP ONLY SALE doesn't work out, the units will go to ebay. Note that my ebay feedback rating can be found as user "p15218":

The S-38C had only five tubes, miserable selectivity, poor bandspread, and drifted like a raft in a storm. It was prone to self oscillation and was a safety hazard.

Use on other than standard broadcast band was difficult. It did fairly well on that band, however.

The original S-38 had six tubes. The sixth tube, the BFO, was eliminated in later versions and the BFO function was accomplished by positive feedback around the IF amplifier.

I had some of those and made a comment back then about the Hallicrafters slogan. "The radio that amazes the experts." Maybe I was an expert because I was amazed. Amazed that they could sell such a thing. I believe the original price was $39.95 but later versions kept going up in price with little or no change. The most major change was the S-38E that was given a slide rule dial, similar to the S-53 and the HT-18. It seemed that the only thing they changed otherwise was the color of the cabinet.

Echophone, a division of Hallicrafters, sold something like an EC-1 I believe that was essentially the same radio.

<< I believe the
original price was $39.95 but later versions kept going up in price with
little or no change. >>

That was about 1 weeks pay for a truck driver in about 1949. As far as performance, it beat my super-regen in many respects. My neigbor owned one and loaned it to me often. One thing I had in good measure was antennas - and lots of space for them with trees in about the right places. With a decent antenna, the S38C worked well.

>> The S-38C had only five tubes, miserable selectivity, poor bandspread, and drifted like a raft in a storm. It was prone to self oscillation and was a safety hazard. <<

My S-38C doesn't seem so bad. With only five tubes, only one of which provides the audio output, it has enough audio power through its "Phones" jack to provide room-filling sound from a set of four speakers that I have normally connected to a 65W/ch stereo system. It picks up many stations with no antenna at all, and a simple indoor wire antenna fills up the shortwave bands with activity. And I've never gotten as much as a tingle from it, as long as I have the power cord plugged in the right way.

Keep in mind that the S-38C was a *bottom*-of-the-line shortwave receiver, from *half a century* ago. That it still manages to have superior reception and audio fidelity compared to today's receivers of equal selling price is a testament to the quality of its original design and craftsmanship. Where can you find a $39.95 radio today that is hand-made in the USA, covers continuously from 520 to 30,000 kHz, and has a BFO, a lighted bandspread dial, and powerful audio with excellent fidelity?

And if you'd like to hear some examples of what the Hallicrafters S-38C can do, including two band-scans and a high fidelity recording of Radio Exterior de Espaï¿½a, fire up your MP3 player and take a listen to the files at this web site:

Nice recordings. Makes me want to fire up my regen. Shortwave
broadcast stations don't broadcast in "high fidelity," though.

$39.95 in 1952 dollars was worth a hell of a lot more than $39.95 in 2002 dollars. As for "powerful audio", it was no more powerful than other AA5 radio on the market; which is to say-maybe a watt and a half, give or take a watt. Depends on how much distortion you are willing to tolerate. That said, a watt into efficient speakers can be fairly loud.

39.95 in 1952 was about equivalent to 270.00 today. It was not a cheap
radio.

There were thousands of Motorola and General Electric tube type gear built
in the 50s and early 60s.

When the FCC mandated reduced deviation and closer channel spacing in the
commercial bands this gear was dumped on ham radio ops, usually for near
nothing.

Most of the equipment was 1 or up to 6 or so channels and required crystals,
and sometimes ovens.

Look around at various ham flea markets for such as Motorola Twin V, GE
Pre-progress or progress line.
